2. Lecture Bureau —Many thousands of slides on a wide variety of educational and recreational topics serving a clientele in over 700 centres in India.

3. Physical—Training Physical Director—schools and colleges, fostering playground movement, Olympics.

Boys.—Scouting, Boys' Clubs, Camps, etc

Students—Hostels and Institutes in most University Centres.

Indian students in Britain —Specially in London, Edinburgh and Glasgow.

"*Citizens*" :—(i.e., English-educated Indians (Ceyloneses and Burmese). Reading Rooms, Libraries, Lectures, Group Conferences, Study-Circles; handling many subjects of vital interest—social, intellectual and religious.

Soldiers —Institutes and Holiday Homes for British Soldiers in a number of centres including the N. W. Frontiers

Anglo-Indians :—Hostels, Institutes, Employment Bureaux.

Europeans —Hostels, Institutes, Employment Bureaux.

Labourers in Mills —"Welfare" Work.

Rural Communities —"Rural Reconstruction" work embracing Co-operative Banking, Distribution, Cattle Insurance and Arbitration, Cottage Industries, and Adult Education in four Selected Centres.

A monthly magazine, the **YOUNG MEN OF INDIA, BURMA AND CEYLON** is issued at Rs 2-8-0 per annum, including postage.

The work of the National Council (excluding that of the 50 local Y.M.C.As) called for a Budget of Rs 1,25,862 in 1933. Of this sum Rs. 28,790 had to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are —

Patron —His Excellency the Earl of Willingdon, GCSI, GMIT, GCMG, GBE, Viceroy and Governor-General of India

President of the National Council —The Most Rev. Dr. Foss Westcott, Metropolitan of India

General Secretary - B L Rallia Ram, BSc, B.T.

The Bombay Association now possesses four well-equipped buildings —Wodehouse Road, Lamington Road, Rebsch Street, and Reynolds Road. The President is The Hon. Mr. Justice K. Bhaile and the General Secretary is Mr. H. W. Bryant, MBE. In connection with each branch there is a well managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting eight centres, serving mill workers, Municipal mental employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON—This Association founded in the year 1875 was organised nationally in 1896

The aim of the Association is to unite women and girls of India, Burma and Ceylon in fellowship and mutual service for their spiritual, intellectual, social and physical development. The Association exists for Indian, Anglo-Indian and European girls and women. There are

members in the following branches: General 35, Schoolgirl 22, Student 29, Girl Guide Companies 35. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings, and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present, owns 21 including 8 Holiday Homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation, though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes Summer Conferences are held annually at Anandagiri, the Conference estate owned by the Association, in Octacumund. Special Girls Camps are arranged from time to time in many centres.

Traveller's and work is done in the large ports, especially Colombo, and a large number of transient guest and visitors are accommodated in the Homes in these centres. The Association also runs employment bureaux through the agency of which many girls find positions. The commercial schools train girls for office and business life. These large Associations

are manned by a staff of trained secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year. The Student Department is affiliated to the World's Student Christian Federation and has 43 branches in the various Schools and Colleges.

The Association, which is affiliated to the World's Young Women's Christian Association is international and interdenominational. Active membership is open to all who declare their faith in our Lord Jesus Christ and desire to serve others in His spirit of love, and Associate membership is open to any girl or woman regardless of what her religion may be, who wishes to join the world-wide fellowship of the Y. W. C. A. and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is H. E. The Lady Willingdon.

Copies of the Annual Reports and other printed matter can be obtained from the National Office which is at 134, Corporation Street, Calcutta. The official organ of the Association is the leaflet "Everymember" which is issued each month and sent to members and friends of the Association.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are —

(1) To facilitate Intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has two branches. The addresses of the Honorary Secretaries are as follows —

Hony Local Secretaries.

Bombay . . Mrs. C. M. Scott, Divisional Engineer's Quarters, Central Telegraph Office, Bombay.

Punjab . . Mrs. Skemp, Race Course Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureau** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now affiliated to the F. U. W. I. and are as such affiliated to the International Federation of University Women which embraces 31 countries of the world and has its headquarters at Crosby Hall, Cheyne Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit and the opportunities it affords for better understanding for world-friendship, and world service, will easily be imagined.

As forming one Family, its Members help the common cause of women: they help one another by inspiration and interchange of service; they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the International Federation alone, into world statistics and the dignity of recognition by the League of Nations at Geneva.

ASSOCIATION OF COLUMBIA UNIVERSITY ALUMNI IN INDIA—This is an organization conceived to unite for service and fellowship all Columbia alumni who may be resident in India. It was founded in 1931, and is a constituent member of the Alumni Federation of Columbia University, New York, U.S.A. There are more than fifty such Columbia Associations including one in London, Paris, Madrid and Berlin. The India Association has its Headquarters in Bombay.

President of the Association. Dr. Jal Dastur C. Pavry, M.A., Ph.D., 63, Pedder Road, Malabar Hill, Bombay.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1929 these last have included. Scholarships from Great Britain and America which gave free tuition, board and residence at certain Colleges to students for a degree; residential scholarships at Crosby Hall, valuable Fellowships and Prizes offered chiefly for Medical or Scientific research by Australia and America.

A special scholarship was offered in 1929 by Barnard College, Columbia University to under-graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit. The Bombay Presidency Women Graduates' Union offers membership to a graduate of any recognised University in the whole world.

Subscriptions.—Each Unit pays capitation at 8 as per head.

The Federation has Branches in Bombay, Lahore, Madras, Kodalkanal. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1928 and 1929. Headquarters are at Bombay from 1930.

OFFICE BEARERS, CENTRAL COMMITTEE.

President. Dr. Muthulakshmi Reddi, M.B., C.M.

LOCAL REPRESENTATIVES.

Bombay .. Mrs. C. M. Scott.

Mrs. I. Baptiste.

Punjab .. Mrs. Skemp

Madras .. Miss Joseph

Kodalkanal .. Mrs. C. McCalland

Honorary General Secretary. Mrs. Doctor, Hirji Mansions, Gowalia Tank Road, Bombay 6.

Applications for membership should be made to the Honorary General Secretary who will forward the same by the Local Secretary to whose Unit it may appertain.

Hon. General Secretary. Mrs. Gulbanu J. R. Doctor, Federation of University Women in India.

The Church.

The Church of England in India became on March 1, 1930, a self-governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archdiocese of Canterbury. This legal bond was severed by the passing of the Indian Church Act and Measure in 1927, and from the date of severance appointed under the Act, the Church of India, Burma and Ceylon has been free to manage its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Like all the other branches of the Anglican communion the Church of India, Burma and Ceylon is Episcopal. It is composed of fourteen sees, Calcutta, Madras, Bombay, Colombo, Lahore, Rangoon, Travancore and Cochin, Chota Nagpur, Lucknow, Tinnevely and Madura, Nagpur, Dornakal, Assam and Nasik. Of these the first to be erected was Calcutta in 1814 and the last was Nasik in 1930. Vacancies on the Episcopal Bench are filled by election, each diocese electing its own bishop. The bishops rule the Church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which has been framed so as to give the greatest possible amount of representation to the whole body of the faithful. The foundation of the system is the **Parochial Council** of which the Parish Priest is the convener and chairman. Every baptised, and confirmed member of the Church residing in the parochial area who contributes, in some recognised way, to the financial support of the Church, is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the **Diocesan Councils**. All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three "Houses," Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together,

but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A "Canon" of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India, Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment—At the time of the passing of the Indian Church Act and Measure the Government of India acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India. These responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians—Anglican, Presbyterian, Roman Catholic and the Free Churches. The Chaplains of the two first named groups are appointed by the Secretary of State for India, the Anglicans on the recommendation of a Selection Committee of which the Archbishop of Canterbury is the Chairman. They are paid by Government and pensioned after a covenanted period of service. Although they form a definite Department of Government they are not subject to the orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station who do not deliberately withdraw themselves from their ministrations, but when troops are included in the number of their parishioners Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India, Burma and Ceylon during their residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer Book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian Church Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These are the Bishops of Calcutta, Madras, Bombay, Lahore, Lucknow, Rangoon and Nagpur.

before 1930 they formed part of the Establishment. One of the difficulties which the Church is facing is that the Government Block Grant is not large enough to provide for all the needs of these bishops. In consequence the Church is struggling to raise Diocesan Endowment Funds to make up deficits. More serious still, however, is the situation brought about by the action of Government in 1924, when in pursuance of a general policy of economy necessitated by post-war conditions it cut down the number of its chaplains by sixty. This set the dioceses a very difficult task. It became necessary suddenly to provide the salaries of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government. Realising the magnitude of this burden Government agreed to help for a period of seven years by means of a very generous Block Grant. The question of the reduction of this grant is now under consideration. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must raise and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will have to be closed. The chief sufferers will be the Anglo-Indian and Domiciled community which on account of "Indianisation" is less able than ever to carry the burden which it seems must inevitably be laid upon it. The difficulty of raising funds for the education of the children of this community and of obtaining priests to work for it becomes greater year by year. Nevertheless the Domiciled Community is the backbone of the Church in India and it is through this community that the conversion of India must come.

The Churches in India have not been wholly blind to these facts and have made desperate attempts to cope with the needs of the community in spite of lack of real support from home. The education of its children is very largely in the hands of the Christian denominations though there are a few institutions such as the La Martinieres Schools, on a non-denominational basis, but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire; and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas, the Apostle, was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called Syrian Church in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches or the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese, who established their hierarchy throughout their sphere of influence, Goa being the metropolitan see of the Indies. St. Francis Xavier, a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the Propaganda in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,823,000, of whom 332,000 were added during the decade 1911-1921. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,000, as against 367,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,930,000, an increase of 547,000 since 1911. Thus, the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till 1813. They have thus been at work in the Indian mission field for over 110 years, and the statistical results of their efforts are given above. It is now, however, generally recognized that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The Protestant missions fill a considerable part in the elementary education of the country. According to the 1923 Report of the National Christian Council for India they are teaching 420,255 children in 12,899 elementary schools, mostly situated in villages. The majority (243,895) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 523 with 70,254 male and 25,303 female pupils. There are 40 colleges affiliated to Universities, containing 20,062 male and 1,309 female students. Of these as many as 14,148 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The

statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideal maintained by their staffs. The principal University colleges under Protestant auspices are the Madras Christian College; the Duff College, Calcutta; the Wilson College, Bombay, the Forman College, Lahore, and three women's colleges—the Women's Christian College at Madras, the Isabella Thoburn College at Lucknow, and the Women's Christian Medical College at Ludhiana. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 6,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more widespread results, is the philanthropic work of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. Hospitals and dispensaries have sprung up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the Salvation Army hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much

more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognized to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahomed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church, which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European laywomen 268. The Society claims a Christian community of 2,21,359 of whom 63,655 are adult communicants.

Society for the propagation of the Gospel.—Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed in many cases manned by the S. P. G., are

entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevely-Madura. The S. P. G. also maintains an important Criminal Tribes Settlement at Hubli, in the Bombay Carnatic. There are 116,000 Indian Christians under the aegis of the S. P. G., 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres upon the Church of Holy Cross, Umarnahadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints' Sisters. Other Anglican sisterhoods represented in India are the Clewely Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries an important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of

the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican Missions.

The Bible Churchmen's Missionary Society carries on work in India in three missions—the Central Provinces, the United Provinces, and Burma. Work was begun in all of these Provinces in 1924. The work of the Society is primarily Evangelistic and this work is carried on by means of Hospitals, Dispensaries, Schools, and Camps. The Society has 17 principal Stations of which 5 have Hospitals and 7 Schools, the latter including the School for the Deaf in Rangoon. The number of Ordained European missionaries of the B. C. M. S. in India and Burma is 11, Doctors 4, European laymen 11 and European laywomen 61. There are 54 Indigenous workers including 3 Doctors. Statistics of the Christian community from all Stations are not available.

An interesting development has lately taken place in the Anglican communion. In 1922 the foundations were laid of a new Religious community called the Christa Seva Sangh or the Society of the Servants of Christ. The aim of its members is to enable Indians and Europeans to live together a common life based upon the three-fold vows of poverty, chastity and obedience and by living together to develop the Religious life along lines peculiarly suited to India. Indians appreciate fully the value of "renunciation". The Sangh hopes to commend Christianity to India by presenting it with a concrete illustration of Christian asceticism. The first Ashram of the Brotherhood was consecrated by Dr. Palmer, Bishop of Bombay, in 1928. It is situated in Poona and it contained at the time of consecration 13 Brothers, of whom 6 were Indians and 7 Europeans. It shows every sign of life and growth.

Bengal Ecclesiastical Department.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India* gives the following tables —

	1911	1921	1931
1. British India and Indian States—			
(a) Latin Rite ..	1,614,620	1,851,408	2,164,918
(b) Syriac Rites ..	364,666	440,488	540,981
2. French India ..	25,918	25,480	25,492
3. Portuguese India ..	296,148	288,741	326,690
Total, India ..	2,301,346	2,606,117	3,067,081
4. Ceylon ..	322,163	393,986	394,993
Total, India and Ceylon ..	2,623,509	2,970,103	3,462,074

NOTE (1) :—In 1860, the total for India and Ceylon was 1,170,854. In 1880 it had risen to 1,610,465 and in 1900 to 2,201,674.

NOTE (2) :—In 1860 there were 1,504 priests. In 1921 there were 3,158. In 1931 there were 3,625.

the Catholic community as thus existing is composed of the following elements:—

- (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
- (3) European immigrants at all times, including British troops.
- (4) Modern converts from Hinduism and Animism in recent mission centres.
- (5) Recent converts from the Jacobite community in Malabar, of which 2 Bishops, 50 priests and some 10,000 laity have been "united" to the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows—

Under the Sacred Congregation of **Extraordinary Ecclesiastical Affairs**:—

The archbishopric of Goa and Daman (having some extension into British territory) with suffragan bishoprics at Cochin and Mylapore (both in British territory).

Under the Sacred Congregation of **Oriental Churches**—

The archbishopric of Ernakulam, with Suffragan bishoprics of **Changanacherry, Kottayam and Trichur.**

Immediately subject to the Holy See.—

The archbishopric of Trivandrum, with suffragan bishopric of **Thiruvella.**

Under the Sacred Congregation of **Propaganda Fide**:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calcut, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna, and Shillong and the Prefecture Apostolic of Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam and Nagpur, the Prefecture-Apostolic of Jubulpore, and the Missions of Cuttack and Bellary.

The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam, Salem and Malacca.

The archbishopric of Simla, with suffragan bishopric of Lahore and the Prefecture-Apostolic of Kashmir.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar and Vijayapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregation or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,300 besides which there is a body of secular clergy mostly Indian, etc., numbering about 2,200, and probably about 2,000 nuns. The first work of the clergy is parochial ministrations to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people, their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,061 boys and 73,164 girls, later figures being unavallable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplains are derived mainly from Europe, that is, from the collections of the *Society for the Pro-*

agation of the Faith and of the Holy Childhood, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism except for infants or at point of death, is administered except after careful instruction

and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Church of Scotland and the United Free Church have become one. The Union, effected in October 1929, has already exerted a profound influence upon the life of the Church of Scotland in India. The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated: Calcutta, 1914; Bombay, 1919; Madras, 1921. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built, in all considerable military stations, e.g., Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1819 and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seven missionaries. The baptised Chris-

tian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1910 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Its two Churches in Bombay have six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports the school for poor children. The Ayrfield Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Report of the Schemes of the Church of Scotland," Blackwood & Sons; "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

Though the former Churches of the United Free Church now belong to the Church of Scotland they remain independent of the establishment recognised by Government. They have only three purely European congregations in India, two in Calcutta, and one in Bombay.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura); the Santal Parganas, with five stations; Western India (Bombay, Poona and Alibag); Hyderabad State (Jalna, Bethel and Parbhani); Madras (Madras City, Chingleput, Sripurumbudur and Conjeevaram); the Central Provinces (Nagpur

Bhandara, Wardha, and Amraoti); Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's

Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is well known. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, and Hilslop College, Nagpur.

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar and Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 206 missionaries and about 978 Indian and Singhalese workers. Connected with the Society are 376 Indian and Singhalese Churches, 299 Primary Day School, 20 Middle and High Schools, and 1 Theological Training College. The Church membership at the close of 1933 stood at 23,245 and the Christian community at 59,812. The membership during the past ten years has increased by about 53 per cent. and the community by 50 per cent. in the same period. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College with its Royal Charter granted by His Danish Majesty in 1827, confirmed by the British Government in the Treaty of Purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, in Arts and Theology. It was affiliated in 1857 to the newly formed Calcutta University; reorganised on the lines of its original foundation in 1910, and the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to the students of all Churches.

In Arts and Science the College prepares for the Calcutta Examinations. *Principal:* Rev. G. F. C. Angus, M.A., B.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 7 Hospitals, and 12 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev. D. Scott Wells, 44, Lower Circular Road, Calcutta.

The Headquarters of the Mission are at 19, Funnival Street, Holborn, London. The total expenditure of the Society for 1934 amounted to £172,031 of which £90,690 was expended in India & Ceylon.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 22 stations and 608 outstations with a staff of 102 missionaries including 10 qualified physicians, and 1,371 Indian workers, with Gospel preaching in 1,536 villages. Organised Churches number 123, communicants 26,885 and adherents 19,000 for the past year. Forty-six Churches are entirely self-supporting. In the Educational department are 564 village day schools, with 19,284 children, 15 boarding schools, 3 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an industrial school. There are 6 Hospitals, two leper asylums and an Orphanage. The Mission publishes a Telugu newspaper Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 65 per cent., the Christian community by 20 per cent., and scholars by 105 per cent. Indian Secretary is the Rev. A. Arthur Scott, Tuni, East Godavari.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1818; Assam 1836; Bengal and Orissa 1836, South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 32 main stations in Burma, 13 in Assam, 10 in Bengal-Orissa 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-Women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages and large efforts are made amongst the employees of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

In the year 1932 the field staff numbered 387 missionaries, 6,876 indigenous workers. There were 2,732 organised Churches of which 1,079 were self-supporting. Church members numbered 2,80,964. In the 2,414 Sunday Schools were enrolled 95,949 pupils. The Mission conducted 2,739 schools of all grades, one of which being Judson College, Rangoon, with 97,322 students enrolled. 13 hospitals and 33 dispensaries treated 8,389 in-patients and 1,22,254 outpatients. Christians of all communities among whom the Mission works contributed over Rs. 6,75,055 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION, was opened in 1836, and has 12 main stations staffed by about 50 missionaries. There are 1,038 native workers, 891 organized churches, 53,186 baptised members, 342 schools of all grades including 2 High, 2 Normal, 3 Bible and 14 station schools. 4 Hospitals and 5 Dispensaries treated 1,561 in-patients and 21,147 outpatients during the year. Mission work is carried out in 10 different languages.

Treasurer and Corresponding Secretary Miss Marion G. Burnham, Gauhati, Assam.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION commenced in 1836. Area of operation—Midnapore district of Lower Bengal, Balasore district of Orissa and Janshedpur Mission staff 36, Indian workers 310. Two English Churches and 32 Vernacular Churches, Christian Community 2,680. Educational Two Boys' High Schools and two Girls' High Schools and 115 Elementary Schools, pupils 4,220. One Industrial School, known as Balasore Technical School,

for carpentering, iron work and motor mechanics. The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary—Mr W. S. Dunn, Bhudrak, Orissa.

THE AMERICAN BAPTIST TELUGU MISSION—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Decan and an important work in Madras and the surrounding vicinity. Its main work is evangelism, but there are also Educational and Medical Institutions of importance. Industrial departments are maintained also in connection with the Mission High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 337, with 110,690 baptised communicants. There are 78 missionaries and 2,720 Indian workers. The mission maintains a Theological seminary at Ramapatnam for the training of Indian preachers. A Bible Training School for the training of Telugu women is located in Nellore. A total of 37,077 receive instruction in 1,270 primary schools, 16 secondary schools and 4 high schools. In Medical work 7 Hospitals and 11 Dispensaries report 5,391 in-patients, 95,108 out-patients, and 115,073 treatments during the year.

Secretary—Rev T. Wathne, Ongole, Guntur District.

THE AUSTRALIAN BAPTIST FOREIGN MISSION—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 35 Australian workers. There are 3,081 communicants and a Christian community of 5,697.

Secretary, Field Council The Rev W. G. Crofts, B.A. Biri Siri Mission House, P. O. Hat-hibganj, Dist. Mymensingh.

THE STRICT BAPTIST MISSION—Has 21 European Missionaries, and 222 Indian workers in Madras, Chingleput, Salem, Ramnad and Tinnevely Districts. Communicants number 1,487, organised churches 54, elementary schools 85, with 2,905 pupils.

Treasurer and Secretary Rev D. Motling, Kovilpatti, Tinnevely District.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION—Operates in Gujarat and Kathiawar with a staff of 36 Missionaries, of whom 13 are clerical, 11 Educationalists, 6 are Doctors and 2 Nurses. The Indian staff numbers 524, of whom 15 are Pastors, 87 Evangelists, 4 Colporteurs, 41 Bible-women, and 348 are Teachers. There are 19 Organised Churches, a communicant roll of 2,358, and a Christian Community of 7,739. In Medical work there are 4 Hospitals and several Dispensaries, with 1,714 in-patients, 17,377 new cases, and a total attendance of 67,819. The Mission conducts 3 High Schools, 1 Anglo-Vernacular School, 1 Preparatory School at Parantij and 131 Vernacular schools affording tuition for 6,724 pupils; also 1 crèche, 4 Orphanages, an Industrial School at Borsad, a Teachers' Training College for Women at Borsad,

a Divinity College at Ahmedabad, and a Mission Press at Surat. The Mission has made it a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 7 missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kanth districts with Farm Colonies attached.

Secretary Rev. George Wilson, B.A. Ahmedabad.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA—The Sikot Mission of this Church was established at Sikot in the Punjab in 1855. It is now carrying on work in ten civil districts in the Punjab and two in the

North-West Frontier Province Its missionaries number 113, including married ladies and its Indian workers 316. Its educational work comprises one Theological Seminary, one College, four High Schools, one Industrial school, seven Middle schools and 134 Primary schools. The enrolment in all schools in 1930 was 13,209. Medical work is carried on through five Hospitals and four Dispensaries. The communicant membership of the Church which has been established was 41,753 in 1931 and the total Christian community 95,216.

General Secretary Rev H C Chambers, D.D., Gordon College, Rawalpindi

THE AMERICAN PRESBYTERIAN MISSION operates in three main sections known as the Punjab, North India and Western India Missions. The American staff, including women, numbers 256, and the Indian staff 1,135. There are thirty-four main stations and 229 out-stations. Organised churches number 100, of which thirty-two are self-supporting. There are 13,826 communicants and a total baptised community of 61,187.

Educational work as follows - Two men's colleges and an interest in the Isabella Thoburn and Kinnaird Colleges for women, students about 1,820, one Theological College, students thirty-four, two Training Schools for Village Workers, students about 180, twelve High Schools, students about 3,400, three Industrial Schools, three Agricultural Demonstration Farms, five Teachers' Training Departments, The Miraj Medical School and an interest in the Ludhiana Medical College for Women, students about 170. 230 Elementary Schools, 241 Schools of all grades, pupils about 12,023.

Medical Work - Seven Hospitals, twenty-four Dispensaries.

Evangelistic Work - 331 Sunday Schools, with an attendance of 11,503 pupils. Contributions for church and evangelistic work, on the part of the Indian church, Rs. 71,254.

The Hospital at Miraj, founded by the late Sir William J. Wankless and now under the care of C. E. Vail, is well-known throughout the whole of S.W. India, and the Forman Christian College at Lahore, under the principalship of Dr. S. K. Bhatta, is equally well-known and valued in the Punjab. The Ewing Christian College (Dr. C. H. Rice, Principal) has grown rapidly in numbers and influence.

Secretary of Council of A. P. Missions in India - Rev J. L. Dadds, D.D., "Lowriston", Dehra Dun, U.P.

Secretary, North India Mission - Rev W. L. Allison, B.A., B.D., Gwalior, C.I.

Secretary, Punjab Mission - Rev J. B. Weir, M.A., Ewing Hall, Lahore.

Secretary, Western India Mission - Rev D. B. Updegraff, M.A., D.D., Nipani, Belgaum District.

THE NEW ZEALAND PRESBYTERIAN MISSION - Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary Miss B. J. Hardie, Jagadhri, Dist. Amballa.

THE UNITED CHURCH OF CANADA MISSION - Commenced in 1877 has 14 main stations in Indore, Gwalior, Rutlam, Dhar, Jaora, Sitamau, Bhopal and Banswara States. The Mission staff numbers 80, Indian workers 200. This Mission works in conjunction with the Malwa Church-Council of the United Church of Northern India, which reports for this part of its territory - Organised churches 22, Unorganised churches 8, Communicants 2,241, Baptised non-communicants 5,836, Unbaptised adherents 821, Total Christian Community 8,898.

Educational work comprises Elementary and Middle Schools for boys and girls, a High School for girls, an Arts College for students of both sexes (The Indore Christian College), a Normal School for girls, and the Malwa Theological Seminary. Women's industrial work is carried on in Mhow and Rutlam, and Vocational Training for boys is a feature of the Rasputa Boys' School, where training is provided in printing, tailoring, carpentry and motor mechanics.

The Medical work is large. There are three General Hospitals, where both men and women are treated, and five Women's Hospitals, and also a number of dispensaries in central and out-stations.

General Secretary of Mission Rev A. A. Scott, M.A., B.D., B. Paed., Indore, C.I.

Associate Secretary of Mission Miss F. E. Cleithure, Khanna, C.I. (Via Meladpur Rd. Station).

Secretary of Malwa Church-Council Rev F. H. Russell, M.A., D.D., Rutlam, C.I.

The Canadian Presbyterian Mission operates in two sections, the Northern Section with headquarters at Jhansi in the U.P., and the Central India Section, known as the Southern Bhil Field.

In Central India the five central stations are located in the States of Aligarh and Jobat and Barwani, but the Mission comprises within its area the States of Jhabua and Kathiawara, also part of Chhota Udaipur in the Bombay Presidency and parts of Dhar, Indore and Gwalior States bordering on the Jobat-Barwani Road. The Staff in Central India consists of 20 missionaries and 42 Indian workers. There are several elementary schools in the area and a central and vernacular School for boys and girls at Amkhut and Aligarh States. At Amkhut also there is a Children's Nursery Home and dispensary and a General Hospital for the area is located at Jobat. In the district there are five organised and 3 unorganised churches with 273 communicant members and a baptised community of over 1,300.

Secretary - Thomas Draper, M.R.C.S. (Lond), M.R.C.P. (Ed) Jobat, Via Dohad, Central India.

The Jhansi Section formerly known as the Gwalior Mission was founded by the late Dr. J. Wilkie in 1905. There is now a staff of twelve missionaries and twenty-five Indian workers who are engaged in Jhansi city, Esagarh, Baragaon and the surrounding villages.

Activities include Anglo-vernacular middle schools for both boys and girls and hostels for Christian pupils in each. There is also an orphanage for children under school age, a

dispensary and an industrial school for boys. There is an agricultural settlement at Esagarh where the Mission has a farm of 1,200 acres.

There are two organised churches having a communicant membership of 150.

Secretary—The Rev A. A. Lowther, M A, B D

THE WELSH CALVINISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 40 Missionaries, 950 Indian workers, occupies stations in Assam in the Khasia and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khasia language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicants number 35,396; the total Christian community 92,923; organised Churches 721; Elementary schools number 678, Scholars 20,243; in addition to Industrial Schools and Training Institutions 3, Theological Seminaries, Sunday Schools 822 and Scholars 54,047. Four Hospitals and several Dispensaries provide annually for more than 10,000 patients.

Secretary: Rev F. J. Sandy, Durtlang, Aijal

THE ARCOT MISSION OF THE REFORMED CHURCH—In America organised in 1853 occupies most of the North and South Arcot and Chittoor districts in S India with a staff of 55 Missionaries and 801 Indian workers. Churches number 16, Communicants 7,452, Total Christian Community 26,442, Boarding Schools 17, Scholars 1,129, Theological School 1, students 31; Voorhees College, Vellore, students 137, High Schools 4, Scholars 1,887, Training Schools 2, students 120, Industrial Schools 2, Agricultural Farm and School 1, total pupils 280, Elementary schools 225, Scholars 9,716. Two Hospitals and 4 Dispensaries with a staff of 68 provided for 2,617 in-patients and 29,571 out-patients excluding the Union Medical College Hospitals and Dispensaries, Vellore.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarters of the Mission. The Union Mission Tuberculosis Sanitarium for S India is near Madanapalle Aroglavaram, P O, Chittoor District.

Secretary—Rev W. H. Farrar, Aml, S India

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS—Has two large Missions, the American Marathi Mission, and the Madura Mission. The Marathi Mission covers a considerable part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur. It was commenced in 1813, the first Amerige Mission in India. Its activities are large and varied. The staff for 1933 consisted of 52 missionaries in all, and 504 Indian workers operating in 9 stations and 90 outstations. Organized churches number 69 with 6,739 communicants, and 1,831 unbaptized adherents. There is a work for lepers at Sholapur. The educational work includes 10 secondary and training schools, with 1,151 pupils, and 68 primary schools, with 4,145 pupils three fifths of whom are non-Christians. Zenana work and industrial work are vigorously carried on, the latter embracing carpentry and lace work. A school for the blind is conducted in Bombay on both educational and industrial lines. In the hospitals and dispensaries of the Mission last year, 57,797 patients were treated. This Mission was the first to translate the Christian scriptures into the Marathi tongue. At Sholapur a settlement or Criminal Tribes is carried on by the Mission under the supervision of Government. *Secretary* Rev. W. Q. Swart, Ahmednagar.

MADURA MISSION—The Madura Mission celebrated its centenary in January, 1934, and at that time turned over administration of work under its control to the Madura Mission Sangam. The Mission still exists to deal with certain matters relating to the maintenance of missionaries. The *Secretary* is Rev W. W. Wallace, Madura.

MADURA CHURCH COUNCIL—The Madura Church Council is a branch of the South India United Church, and is in charge of the Christian community that has developed through the work

of the Madura Mission. The Madura Church Council is in charge of 33 parishes, about 250 village schools, and five large Elementary Higher Grade Co-educational Boarding Schools. The *Secretary* of this organization is Rev Paul, Raj Thomas, Punalai.

MADURA MISSION SANGAM—The Madura Mission Sangam was formed in January, 1934, to take over work in the Madura and Kannad Districts which had hitherto been under the control of the Madura Mission. This work consists of a Hospital for men and a Hospital for women and a large High School and Training School for girls in Madura a school, for girls at Rachanyapattam three miles from Madura, a High School, Training School, Trade School and Theological Seminary at Punalai, together with some responsibility for the village work under the immediate control of the Madura Church Council.

The Madura Mission Sangam consists of a little over forty members more than half of whom must by constitution be Indians. The *Secretary* of the Madura Mission Sangam is Rev. R. A. Dudley, Tirumangalam.

THE AMERICAN COLLEGE, MADURA—The American College, then located at Punalai, was affiliated with the University of Madras as a second Grade College in 1881. In 1901 the College Department was removed to Madura where for five years it was accommodated in what is now the Union Christian High School building. In 1909 the College was removed to its present site in Tallakulam on the north side of the Vaigai river. It was affiliated as a First Grade College in 1913.

In 1934 at the time of the centenary of the Mission, the American College became organically independent under its own Governing Council. In the same year it was granted affiliation as an Honours College.

The present College site comprises about forty acres. On the College grounds are located the Main College Hall, the Ellen S. James Hall of Science, Binghamton Hall, the Chapel, Daniel Poor Memorial Library, Main Hostel, Zumbo Memorial Hostel, Dining Halls, Principal's residence, Warden's Lodge, four additional bungalows, and athletic fields.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—The mission staff in Khandesh is represented by sixteen missionaries, and 39 Indian workers. There are 292 church members in good standing with 741 in Sunday Schools. 14 Elementary Schools provide for 368 pupils.

Secretary—Miss Olga E. Noreen, Amalner, East Khandesh.

THE SWEDISH ALLIANCE MISSION—Working among Buis, Hindus and Muhammedans in West Khandesh, has 22 missionaries and 49 Indian workers. There are 8 congregations with a total membership of 1,021 of whom 466 are communicants. There are 12 Elementary Schools, 2 Training Schools and 5 School Homes. The pupils in all schools are 507.

Secretary—The Rev. S. Ohlsson, Mandalwar, Vin Taloda, W. Khandesh.

FREE CHURCH OF FINLAND MISSION—Total Mission staff is represented by 6 Missionaries: 1 native pastor, 2 Catechists, 3 teachers. There are about 118 communicants and total community 200. Three day schools, 1 evening school, 3 dispensaries and weaving industry.

Secretary—Rev. E. A. Ollila, Ghum, D. H. Railway.

THE LONDON MISSIONARY SOCIETY—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore. The Mission engages in every form of Missionary activity.

The European staff numbers 87, Indian workers 2,450, Organised Churches 520, Communicants 25,311 and Christian Community 177,795. There are 1 Christian College, students 159; 2 Theological Institutions, students 70; 4 Training Institutions, pupils 114; 12 high schools, pupils 4,849. 25 Boarding schools, scholars, 1,167 and 862 Elementary schools with 46,371 scholars. In medical work Hospitals number 6, Nurses 7 Europeans and 33 Assistants, 14 qualified doctors, 9 Europeans and 62 Assistants and 10,413 in-patients and 206,276 out-patients for the year.

The main centres of the Mission in N. India are at Calcutta and Murshadabad District, Bengal; L. M. S. work in the United Provinces has been closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. has been opened in Benares City with the Rev. J. C. Jackson of the L. M. S. as Superintendent. This Mission concentrates especially on work amongst pilgrims and students. Special efforts are made amongst the Nana Sudras. The S. India district and Travancore are divided into the Kanarese, Telugu, Tamil and Malayalam fields with 19 stations and 959 outstations. At Nageroll (Travancore) is the Scott Christian College and High School with 985 students, a Church and congregation said to be the largest in India and a Printing Press, the centre of the S. Travancore Tract Society.

Bengal Secretary—Rev. H. A. Wilson, B. A., 16, Ashutosh Mukerji Road, Calcutta.

South India—Secretary and Treasurer—Rev. George Parker, M. A., B. D., 18, Lavelle Road, Bangalore.

Benares Superintendent—Rev. J. C. Jackson, Raikatora, Benares Cantonment U. P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1803 under the name of the International Missionary Alliance, but in number of its missionaries were at work Berar Province much earlier. Work is carried on in the Provinces of Berar, Khandesh and Gujarat. There is a staff of 50 missionaries and 80 Indian workers. The number of mission stations is 16 with additional outstations. THE INDIAN MISSIONARY SOCIETY OF TINNEVELLY (DORNAKAL MISSION)—Opened in 1903 operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Pallars in the British and Travancore Hills. It is the missionary effort of the Tamil Christians of Tinnevely. There are now nearly 8,020 Telugu Christians in 135 villages and 416 Malay Christians in the hills. The Society publishes monthly *The Missionary Intelligence* containing information about the Society's work in both the fields. *Secretary*—Rev D. S. David, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874, is an interdenominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 20 countries but largely in India, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India alone the Mission now has 36 Asylums of its own with

upwards of 6,500 inmates and is aiding or has some connection with work for lepers at 22 other places in India. Altogether in India over 8,005 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India is received from Britain, although the provincial Government give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which H. E. Lady Brabourne, who represents the Bombay Presidency, is a Vice-President.

Hon. Treasurer—P. B. Morris, Esq., P. O. Box 161, 6, Church Lane.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the Schleswig-Holstein Evangelical Lutheran Mission, Madras, the Gosner Evangelical Lutheran

Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Behar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council."

Methodist Church.

THE METHODIST MISSIONARY SOCIETY commenced work in India, in 1817. The Mission in India apart from Ceylon is organised into 7 Districts with their separate District Synods working under 2 Provincial Synods. In connection with these Synods there is a large English work with 22 ministers giving their whole time to Military and English work.

The Districts occupied include 149 Circuits in Bengal, Madras Mysore, Bombay, Punjab, North West Frontier Provinces, Baluchistan, Central Provinces, United Provinces and Nizam's Dominions. The European staff numbers 130 with 74 Indian ministers and 903 catechists. There are 349 Churches with a Christian community of 151,296 and 26,133 Communicants. There are a number of Circuits with their Churches thoroughly organised and self-supporting. Educational work comprises 3 Christian Colleges with 89 teachers and 1,763 students, 5 Theological Institutes with 42 teachers and 373 students, 9 High Schools with 206 teachers and 4,539 students, 6 Industrial Institutes with 29 teachers and 263 students, 7 Boarding Schools with 103 teachers and 1,856 scholars, 1,141 Elementary Schools with 1,982 teachers and 38,282 scholars.

Medical work is represented by 12 Medical Institutions with 6 European and 10 Indian doctors, 3,090 in patients and 139,567 Out patients.

The Women's Department of the Society also carry on an extensive work in the places occupied by the Methodist Missionary Society. There are 104 Women Workers, including 16 doctors and 181 Bible Women, 115 Girl Day Schools with 473 teachers and 12,095 scholars, while there are 45 Boarding Schools and Training Institutions with 190 teachers and 2,505 boarders. The Women's Department is responsible for a very extensive Medical Work and have 15 Hospitals and 16 Dispensaries with 12,695 In-patients and 393,702 Out-patients.

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1936, at first confining its activities to what is now the United Provinces. From that centre it spreads until the outposts of its work were found in Baluchistan, Burma, Malaya, Netherlands, India and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of 525,668.

The avowed task of the Church has been the uplift of the depressed classes, and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive, it having in this area a total of 1,100 schools of all grades, including three colleges, twenty-two high schools, and numerous normal training and theological institutions. The registered attendants in these schools number 10,000.

Special effort is made for the instruction and development of the young people of the Church, there now being 336 chapters of the Epworth League with 13,394 enrolled members, and 4,021 organized Sunday Schools with an enrolment 139,422.

The publishing interests of the Church are represented by the Lucknow Publishing House at Lucknow doing work in English, Urdu, Hindi and other Vernaculars. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Christian Education being in English, while the *Kaukab-i-Hind*, and other periodicals are issued in several of the vernaculars.

The governing body of the Church is the General Conference held quadrennially in America in which the eleven conferences now existing in India are represented by twenty-four delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being but about two hundred American men and women as compared to 800 ordained and 4,000 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by three Bishops, elected by the General Conference, and residents as follows: Bishop John W. Robinson, Delhi, Bishop Brenton T. Badley, Bombay and Bishop Jashwant Rao Chitambar, Jubbulpore.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters. Stations with Missionaries, Dandi Maroli, *via* Naigole, District Thana. Paidi, District Satal. Eight Missionaries on field. Two on turlough. Four main stations. Two Boarding schools. One industrial school. One Bible School. One village farm project. Eight village schools. Chairman of Field Committee, Rev P. D. Doty, Sanjan, District Thana.

THE METHODIST PROTESTANT MISSION began work in India in 1919, has a staff of six missionaries. The work is confined to Dhulla Taluka, with one Main station, Dhulla. There are two boarding schools, district evangelistic work and medical work. *Secretary* Mrs Paul Cassen, Dhulla, West Khandesh.

THE FREE METHODIST MISSION of North America - Established at Yeotmal, 1893, operates in Berar with a staff of 11 Missionaries and 10 Indian workers. Organised churches 5, 1 Theological school, 1 Girls' Boarding School, 1 Vernacular Middle school, 8 Elementary Schools, 1 Dispensary and 5 centres for clinical and village health work.

Secretary: Persis M. Phelps, Yeotmal, Berar.

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker, and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander, and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Malras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Pondicherry, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Territory, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory -- The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformatory work was commenced), and also in the Punjab, great progress has been made. A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces, and also in one dispensary.

Other institutions include, Day and Boarding Schools, Weaving Schools, Agricultural Colonies, a Hospital for British Military Soldiers, and Civilians at Delhi.

Village centres at which the S. A.

Works 1,776

Officers and Employees 580

Social Institutions 22

Territorial Headquarters Ferozepur Road, Lahore, Punjab

Territorial Commander Commissioner N Muthiah.

Chief Secretary Lt.-Colonel W D Pennick

Western Territory—The Western Territory comprises Bombay, Gujarat, Panth Mahals and the Maharastra.

Territorial Headquarters The Salvation Army Morland Road, Bynulla, Bombay

Territorial Commander Colonel Ghana Dasen (Alfred H Barnett)

Corp. 283, Outposts 259, Societies 478, Social Institutions 16

Besides the distinctly evangelistic operations, there are established a large General Hospital—Emery Memorial, Anand—and several Dispensaries, 222 Day Schools, 4 Boarding Schools, a Home for Juvenile Criminals, Industrial and Rescue Home for Women, conditionally Released Prisoners' Home, the management of the Bombay Helpless Beggars' Camp, Weaving Schools, Factory for the making of Weaving, Warping and Reeling Machines, and a Land Colony having a population of about 390 Salvationists

Madras and Telugu Territory.—This Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency

There are the following agencies at work, viz., places in which work is systematically done, both evangelic and education and social—290 Corps and Outposts, 116 village primary schools; 1 Criminal Tribes Settlement, 2 institutions for the training of Officers, 1 Leper Colony at Bapatla taken over by us in 1928, a Women's Industrial Home in Madras, a Boarding School for girls, and another for boys of the Salvation Army.

Territorial Headquarters The Salvation Army, Broadway, Madras. (G. P O Box 206)

Territorial Commander Colonel Herbert B Colledge

General Secretary Brigadier H H Rawson

The South India Territory.—The South (India) Territory embraces the whole of Travancore which has a population of more than 5,000,000, the work penetrating Cochin State in the North and the Tinnevely District of British India in the South.

Definite efforts are being made from more than 1,300 centres for the salvation and social uplift of the people

The erection of two Central Halls, six village Halls and a number of improved Officers' Quarters, during recent months have provided increased facilities for service and make for consolidation. Operations in 20 new villages have recently been commenced

A highly successful work is conducted in 3 Boarding Schools, where under the guidance of experienced Officers some 150 Boys and Girls are cared for. Many trained in these schools have become successful Officers and Local Officers

In nearly 300 Day Schools primary education and religious instruction are given to a large number of children while activities at the English and Vernacular Middle Schools at Nagercoil, and the English Middle School in Trivandrum are highly appreciated

Medical work at the Catherine Booth Hospital and 7 Branch Hospitals is attended with increasing success and is of vital importance to the State. At the Catherine Booth Hospital a splendid new administrative Block has just been opened by the Hon Sir C P Ramaswamy Iyer, Constitutional and Legal Advisor to His Highness the Maharaja of Travancore. The Sankaran Thampi Memorial Tuberculosis Block has just been completed, also other extensions which make for more effective service

Last year more than 12,000 patients were treated at the Catherine Booth Hospital, representing all sections of the Hindu, Mohammedan and Christian communities

Some 300 patients in the Leper Hospital at Adoor, Cochin State, are happy and show marked improvement resulting from expert treatment. State and other visitors have expressed their unqualified appreciations of the management and general care exercised at the Hospital

A new Leper Colony is now in course of erection in North Travancore which will meet a very real need in this region.

An Industrial Department at Nagercoil, producing lace, fancy and other needlework, continues to function satisfactorily and are received as boarders and others are benefited. Boarding School boys are taught book-binding at Trivandrum Industrial Department

Copies of Vernacular 'Wai Cry' are distributed in the Central Prison Trivandrum, and meetings held weekly are attended with encouraging results

The Home League has recently been launched and is making a splendid contribution toward the spiritual and social advancement of women and the general home-life of the people.

Territorial Headquarters The Salvation Army Kuravancanam, Trivandrum

Territorial Commander Lieut. Commissioner Priya (Mrs Trounce)

Chief Secretary Lieut.-Colonel Anand Singh (Bowyer).

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled

in 1908 and the Code of Criminal Procedure in 1898. These Codes as amended from time to time are now in force.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This

provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans. . . . Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown, they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in India or lawyers, qualified in India. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Sindh, N. W. F. Province and the Central Provinces and Berar the principal legal tribunal is known as the Court of the Judicial Commissioner. Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Berar.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial

Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates, in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in those original or appellate Criminal Jurisdictions. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district as District Judge he presides in the principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As in

solveny Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency towns of Calcutta and Bombay elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts, and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex officio*, by the Advocate General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts, similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Councils Act, XXXVIII of 1926. The aim and purpose of this Act is to abolish as far as practicable the distinctions between the various classes of legal practitioners and promote the creation of a uniform Bar.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development. "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached

to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian." Besides to say that this position has been still further accentuated during the 20 years that have elapsed since 1914 both in the direction of expansion and of Indianisation of the legal profession.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the secretariat a Legal Remembrancer and an Assistant Legal Remembrancer drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister). The United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate, the Punjab has a Legal Remembrancer Government Advocate and a Junior Government Advocate, and Burma a Government Advocate, besides a Secretary to the Local Legislative Council. Under the Government of India Bill it is proposed to appoint an Advocate-General for each of the more important provinces.

Shriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy shriffs, who are officers of the Court.

Law Reports

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice, however, this power is little used; there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the

principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.) To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bengal Judicial Department.

Derbyshire, The Hon'ble Sir Harold, Kt., K.C., M.C.,	Chief Justice,

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the semindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police, and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only "to the general control" of the Governor-General.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D. S. P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector-General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarters Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarters Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head-quarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of these officers and the comments of the judge are a means for the D. S. P. to know whether his Thanadars are doing their work properly.

Out Posts—When the Police Commission of 1886 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile, the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—Ordinarily the constable may aspire to become a jamadar, or with ability and luck, a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a Thanadar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D I G after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund.

Presidency Police—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, i.e., without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures—The process of reorganisation and retrenchment goes on ceaselessly, annual administration reports for the ten major provinces and four minor administrations appeared tardily, and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly.—There are about 25,000 Military Police, chiefly in Burma, Assam, and Bengal, and these cost about one crore. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200,000 and cost eleven and a half crores or an average of over one crore per major Province.

There are about 10,000 Thanads or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty-five thousand cattle thefts, one hundred and seventy thousand ordinary thefts and as many burglaries. They place on trial every year about three-quarters of a million persons, of whom about half a million or more are convicted. The jail population of India, which is over a hundred thousand, consists of many habituals who on release proceed to prey on the public until such time as the police again secure their conviction and incarceration.

Statement (1) "Military Police" for 1932.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas, but they cannot properly be used as a basis of comparison even for larger areas without taking

into account the differences in the condition under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime —

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails** at the headquarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General, he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A *Pris. Note* issued by the Bombay Government in October, 1916, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject

to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation, of recruiting a better class of warders; of providing education for prisoners, and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents, and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial; the institution of the star-class system, and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extramural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habitués) who are over 15, and therefore ineligible for admission to the reformatory school has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1903, a special class for selected juveniles and young adults was established at the Dharwar jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Melkita jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases, a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the

Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home. The effect up to date has been to introduce a completely new outlook on life into the settlement, but it is still too soon to appreciate its potentialities. It has recently been found necessary to send to the Andamans certain convicts either sentenced to transportation for life or to long terms of rigorous imprisonment for permanent incarceration in the Cellular Jail. Such prisoners will not be released and allowed to go into the settlement, and its development will in no way be affected by their presence.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as-

certaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1932 are shown in the following table:—

—	1932	1931	1930	1929	1928
Jail population of all classes on 1st January	154,871	161,298	137,129	140,142	136,424

Released during the year	247,648	216,807	196,996	163,706	160,375
Transported beyond seas	1,492	1,685	1,509	1,821	566
Casualties, &c.	2,195	2,503	2,511	2,514	2,497
Convict population on 31st December,	139,708	126,580	136,552	116,187	118,706

More than one-half of the total number of convicts received in jails during 1932 came from the classes engaged in agriculture and cattle tending, about 190,000 out of 267,000 were returned as illiterate.

The percentage of previously convicted prisoners fell from 14 to 12, while the number of youthful offenders rose from 480 to 1,024. The following table shows the nature and length of sentences of convicts admitted to jails in 1930 to 1932 —

Nature and Length of Sentence.	1932	1931	1930
Not exceeding one month	43,196	39,284	35,773
Above one month and not exceeding six months.	120,656	89,647	109,714
" six months One year ..	54,253	39,373	40,878
" one year five years ..	38,673	30,584	29,950
" five years ten	5,598	4,740	3,935
Exceeding ten years	705	575	533
Transportation beyond seas—			
(a) for life	2,348	1,933	1,592
(b) for a term	94	100	37
Sentenced to death	1,648	1,331	1,126

The total daily average population for 1932 was 144,004, the total offences dealt with by criminal courts was 310, and by Superintendents 97,736. The corresponding figures for 1931 were 121,900, 195 and 111,545, respectively.

The total number of corporal punishments showed a slight increase, viz., from 174 to 180. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 4,669 as compared with 3,684 in the preceding year.

Total expenditure increased from Rs. 1,75,48,011 to Rs. 1,77,91,758, while total cash earnings decreased from Rs. 25,72,343 to Rs. 24,01,285; there was consequently an increase of Rs. 4,14,735 in the net cost to Government.

The death rate decreased from 12.42 per mille in 1931 to 10.19 in 1932. The admissions to hospital were higher, and the daily average number of sick fell from 23,73 to 23,12.

The Laws of 1934

BY

RATANLAL RANCHHODDAS, *Advocate, High Court,*

AND

MANHAR R. VAKIL, *Barrister-at-Law.*

1 The Indian Tariff (Amendment) Act.—During the past year certain industries which under normal conditions could not fulfil the conditions prescribed by the Indian Fiscal Commission for the grant of substantive protection were subjected to competition of an exceptional nature which proved a menace to their continued existence. The present Act affords assistance to each of the following industries by the imposition of minimum specific duties applicable against all countries. The industries concerned are: Fish oil, sugar-candy, heavy chemicals, cotton hosiery, glass globes and chimneys, paints, soap, enamelled ironware, electrical earthenware and porcelain, domestic earthenware, lead pencils, parasols and sunshades, tiles, cast iron pipes and woollen hosiery and fabrics

2. The Reserve Bank of India Act.—The Federal Structure Sub-Committee of the first Round Table Conference recommended the establishment of a Reserve Bank for India for the management of Indian Currency and Exchange. In the report of the Financial Safeguards Committee of the third Round Table Conference it was placed on record that "the Secretary of State undertook that representative Indian opinion would be consulted in the preparation of proposals for the establishment of the Reserve Bank including those relating to the reserves." A representative committee was set up in order to give effect to that undertaking. The present Act follows the recommendations of that Committee

S 3 provides for the establishment and incorporation of the Reserve Bank of India for the purpose of taking over the management of the currency from the Governor General in Council and of carrying on the business of banking in accordance with the provisions of this Act. S 4 deals with share capital, share registers, shareholders and the manner of allotment of shares. The share capital of the Bank will be five crores of rupees divided in shares of one hundred rupees each. Separate registers of shareholders will be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon. A shareholder will be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business but no person will be registered as a shareholder in more than one register. Under ss. 7 and 8 the general superintendence and direction of the affairs and business will be entrusted to a Central Board of Directors consisting of (1) a Governor and two Deputy Governors, to be appointed by the Governor General in Council, (2) four Directors, to be nominated by the Governor General in Council, (3) eight Directors elected

on behalf of the shareholders on the various registers, and (4) one Government Official nominated by the Governor General in Council. The Governor and a Deputy Governor may hold office for a term not exceeding five years as the Governor General in Council may fix when appointing them, and is eligible for re-appointment. A nominated or elected Director holds office for five years. S. 9 provides for the constitution of Local Boards for each of the five areas specified in the First Schedule, namely, the Western area served by the Bombay Register, the Eastern area served by the Calcutta Register, the Northern area served by the Delhi Register, the Southern area served by the Madras Register and the Burma area served by the Rangoon Register. A Local Board will consist of five members elected from amongst themselves by the shareholders who are registered on the register for that area and not more than three members nominated by the Central Board from amongst the shareholders registered on the register for that area. The elected members of a Local Board must elect from amongst themselves one or two persons to be Directors representing the shareholders on the register for the area for which the Board is constituted. A Local Board must advise the Central Board on such matters as may be referred to it and must perform such duties as the Board may by regulations delegate to it. S. 13 provides for meetings of the Central Board which must be convened by the Governor at least six times in each year and at least once in each quarter. Any three Directors may require the Governor to convene a meeting of the Central Board at any time. The Governor, or in his absence the Deputy Governor authorized by the Governor to vote for him, must preside at meetings of the Central Board, and in the event of an equality of votes has a second or casting vote. S. 17 enumerates the various kinds of business which the Bank may transact. Under S. 20 the Bank has the sole right to issue bank notes in British India, and may, for a period fixed by the Governor General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor General in Council. S. 30 empowers the Governor General in Council to supersede the Central Board if in his opinion the Bank fails to carry out any of the obligations imposed on it by or under this Act and thereafter the general superintendence and direction of the affairs of the Bank will be entrusted to such agency as the Governor General in Council may determine. When action is taken under this section the Governor General in Council must cause a full report of the circumstances leading to such action and of the action taken to be laid before

the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board.

3. The Imperial Bank of India (Amendment) Act.—It was recognised, since the plan of setting up a Reserve Bank for India was first considered, that, with the transfer to a Reserve Bank of the purely central banking functions which are at present performed by the Imperial Bank of India, the latter should be freed from some of the restrictions which are at present imposed upon it. The present Act secures this by amending the Imperial Bank of India Act, 1920. It modifies the control of the Governor General in Council over the management of the Bank, removes certain restrictions on the transaction of business by the Bank and provides for an agreement between the Bank and the Reserve Bank of India. S. 3 of the present Act by repealing s. 9 of the original Act removes the limitation on the business which the Bank may transact at its London office and s. 5 empowers the Bank to open branches outside India, in London and elsewhere. S. 4 authorises the Bank to enter into an agreement with the Reserve Bank of India to conduct Government business as agent of the Reserve Bank. S. 12 substitutes a new section for s. 28 of the original Act regarding constitution of the Central Board. The number of Directors to be nominated by the Governor General in Council is reduced from four to two. The right of the Governor General in Council to appoint the Controller of the Currency to be a member of the Central Board is removed. The Governor General in Council must nominate an officer of Government to attend the meetings of the Central Board and to take part in its deliberations but without any right to vote on any question arising at any meeting.

4. The Wheat Import Duty (Extending) Act.—The present Act extends the life-time of the Wheat (Import Duty) Act, 1931, so as to continue the existing duties on wheat and wheat flour for a further period of one year, viz., up to the 31st March 1935.

5. The Indian Medical Council (Amendment) Act.—S. 2 of the present Act makes the Rangoon University a British Indian University within the meaning of s. 2 (a) of the Indian Medical Council Act, 1933, and enables persons enrolled in the Provincial Medical Register of Burma and possessing medical qualifications granted by the University, to exercise the privilege of participating in an election to the Council under s. 3 (1) (c) of the Original Act. S. 8 enables the Council of the University to elect one member from amongst the members of the Board of Studies in medicine to the Indian Medical Council, under s. (1) (b) of the Act.

6. The Cotton Textile Industry Protection (Amendment) Act.—This Act continued the protection granted to the industry by the Cotton Textile Industry (Protection) Act, 1930, as subsequently amended, for a further period up to the 30th April, 1934.

7. The Steel and Wire Industries Protection (Extending) Act.—This Act continues the protection granted to the industry by the Steel Industry (Protection) Act 1927, as subsequently

amended, the Wire and Wire Nail Industry (Protection) Act, 1932, and the Indian Tariff (Ottawa Trade Agreement) Amendment Act, 1932, for a further period up to 31st October, 1934.

8. The Khaddar (Name Protection) Act.—This Act regulates the use of the words "Khaddar" and "Khadi" when applied as a trade description of woven materials. Under s. 2 these words when applied to any woven material are deemed to be a trade description within the meaning of the Indian Merchandise Marks Act, 1889, indicating that such material is cloth woven on hand-looms in India from cotton yarn handspun in India.

9. The Indian Finance Act.—This Act continues for a further period of one year certain duties and taxes imposed under the Indian Finance Act, 1933. Ss. 2, 5 and 6 provide for the continuance for a further period of one year of the existing provisions regarding salt duty, rates of income-tax and super-tax and the credit to revenue of interest on securities forming part of the Paper Currency Reserve. S. 3 provides for a uniform duty of 25 per cent. *ad valorem* and in addition either eight rupees and two annas per thousand or three rupees and four annas per pound whichever is higher. The import duty on manufactured tobacco is raised by rupee one and annas four per pound, the standard rate of duty will thus be Rs. 3-4-0 per pound and the preferential rate for British Colonies Rs. 2-12-0 per pound. Under s. 3 the import duty on silver is reduced to five annas per ounce without any surcharge. Section 3 (1) abolishes the export duty on hides. S. 4 reduces the postage on letters not exceeding half a tola in weight from one anna and three pies to one anna and increases the minimum charge on book, pattern and sample packets from half an anna to nine pies. S. 7 provides for the reduction of the excise duty on silver corresponding to the reduction in import duty.

10. The Salt Additional Import Duty (Extending) Act.—This Act gives effect to the recommendation made by the Salt Industry Committee of the Legislative Assembly by extending the life of the Salt (Additional Import Duty) Act, 1931, for a further period of thirteen months.

11. The Indian States (Protection) Act.—The forthcoming constitutional changes make it desirable that the authorities in British India should have power to protect units of the Federation from agitation directed against them from British India. Such agitation may involve (1) attacks in the press, (2) the organization of the activities directed against State authority, and (3) the organization of movements for the entry into a State of bodies of persons from British India. The present Act affords protection against such activities to the Administration of States in India which are under the suzerainty of His Majesty.

S. 2 prescribes punishment which may extend to imprisonment for seven years for a conspiracy to overawe by means of criminal force the Administration of a State in India. S. 3 provides for protection against attacks in the press which bring into hatred or contempt or excite disaffection towards the administration

established in any State in India. Statements of facts made without any malicious intention and without attempting to excite hatred, contempt or disaffection are exempt from the operation of this section. § 4 empowers a District Magistrate or in a Presidency-town the Chief Presidency Magistrate to prohibit within a specified area the assembly of five or more persons when he is of opinion that attempts are being made within his jurisdiction to promote assemblies of persons for the purpose of proceeding from British India into the territory of a State in India and that the entry of such persons into the said territory is likely to cause obstruction to the administration of the said State.

12. Indian Tariff (Textile Protection) Amendment Act.—By the Cotton Textile Industry (Protection) Act, 1930, the Indian industry was given a temporary measure of protection. In accordance with the undertaking given when the Act was passed, the claims of the industry to substantive protection were examined by a Tariff Board. The Tariff Board found that the Indian cotton textile industry had established a claim to substantive protection, but the Government of India, while accepting this conclusion, have found it necessary to review the measures of protection recommended by the Tariff Board in the light of events subsequent to the submission of its report—the denunciation of the Indo-Japanese Trade Convention and the subsequent conclusion of a new trade agreement with Japan together with the unofficial agreement between representatives of the Indian and the United Kingdom textile industries. The present Act gives statutory effect to these agreements. The Act also incorporates the decisions of the Government of India on the recommendations of the Tariff Board appointed to investigate the claims of the sericultural industry to protection.

13. The Trade Disputes (Extending) Act.—The Trade Disputes Act, 1929, expired on the 7th May, 1934. The present Act converts it into a permanent measure.

14. The Sugar (Excise Duty) Act.—This Act provides for the imposition and collection of an excise duty on sugar produced in factories in British India. § 2 is concerned with definitions. "Khandasari sugar" is defined as sugar in the manufacture of which neither a vacuum pan nor a vacuum evaporator is employed and "palmyra sugar" is sugar manufactured from jaggery obtained by boiling the juice of the palmyra palm. § 3 provides for the imposition of an excise duty on sugar at the following rates, namely—(1) on *Khandasari* sugar at the rate of ten annas per cwt., (2) on all other sugar except palmyra sugar at the rate of one rupee and five annas per cwt., (3) on palmyra sugar at such rate as may be fixed by the Governor General in Council. § 4 deals with the recovery of duty with penalty for non-payment of duty. § 6 empowers the Governor General in Council to impose a customs duty on sugar brought into British India from the territory of any Native State in India equivalent to the excise duty imposed by this Act on sugar produced in British India. Under § 8 the penalty for evasion of duty or failure to supply information which a person is required by any rule under this Act to supply or knowingly supplies false

information, is imprisonment which may extend to six months, or fine which may extend to two thousand rupees. § 9 empowers the Courts to order forfeiture of sugar in respect of which an offence under this Act has been committed. § 11 empowers the Governor General in Council to make rules to carry into effect the purposes and objects of this Act. The Governor General in Council may delegate all or any of his powers under this section to a Local Government.

15. The Sugar-cane Act.—This Act enables Provincial Governments to apply schemes for enforcing a minimum price for cane to be paid by the factory to the grower. This is consequential upon the imposition of an excise duty on factory sugar. As initiative in the matter of fixing prices for cane must be left to Provincial Governments so as to suit local conditions, § 13 of the Act provides that it comes into force in any province on such date as the Local Government may direct. Under § 3 (1) the Local Government may by notification declare any area specified in the notification to be a controlled area for the purposes of this Act. Under clause (2) of the same section, the Local Government may by notification subject to the control of the Governor General in Council, fix a minimum price for the purchase in any controlled area of sugar-cane intended for use in any factory. Under § 4 not less than thirty days before the issue of any notification under § 3, the Local Government must publish in the local official Gazette a draft of the proposed notification specifying a date on or after which the draft will be taken into consideration, and must consider any objection or suggestion which may be received from any person with respect to the draft. Under § 5 the penalty for purchase of sugar-cane in contravention of a notification under § 3 is fine up to two thousand rupees. § 7 authorises the Local Government to make rules for the purpose of carrying into effect the objects of this Act.

16. The Matches (Excise Duty) Act.—The present Act imposes an excise duty on matches manufactured in British India. Under § 2 "match" includes a firework in the form of a match, and where a matchstick contains more heads than one capable of being ignited by striking, each such head is deemed to be a match. "Splints" are defined as undipped splints such as are ordinarily used for making matches and "vencers" means vencers such as are ordinarily used for making matches. Under § 4 the rates of duty payable are levied at the following rates, namely—(a) on matches in boxes or booklets containing on an average not more than eighty—(1) if the average number is forty or less, at the rate of one rupee per gross of boxes or booklets, (2) if the average number is more than forty, but not more than sixty, at the rate of one rupee and eight annas per gross of boxes or booklets, and (3) if the average number is more than sixty, at the rate of two rupees per gross of boxes or booklets, and (b) on all other matches at such rates as the Governor General in Council may prescribe. § 8 empowers the Governor General in Council to direct use of banderoles or stamps of such nature and affixed in such manner as may be prescribed by rule made under this Act. § 9 prohibits manufacture of matches and manufacture and import of splints and vencers without a license to manufac

ture or import issued under this Act. Under s 13 the penalty for contravening the provisions of s 9 is imprisonment which may extend to six months or fine up to one thousand rupees. s 20 brings into accord the customs duty on matches with the excise duty imposed by this Act.

17. The Negotiable Instruments (Amendment) Act. The present Act by amending s 85 of the Negotiable Instruments Act, 1881 provides that cheques originally drawn to bearer do not lose their bearer character notwithstanding any endorsement thereon whether in full or in blank and whether such endorsement purports to restrict or exclude further negotiation or not.

18. The Indian Trusts (Amendment) Act.—Certain Provincial Governments were desirous that the status of trustee securities should be extended to debentures issued by Land Mortgage Banks and similar corporations, provided that both the principal and interest of such securities were fully and unconditionally guaranteed by the Local Government concerned. The present Act gives effect to this by adding a proviso to clause (n) of s 20 of the Indian Trusts Act, 1882.

19. The Indian Dock Labourers Act.—The International Labour Conference at its twelfth session held in 1929 adopted a Draft Convention concerning the protection against accidents of workers employed in loading or unloading ships. At its sixteenth session held in 1932 the Conference adopted a Revised Draft Convention which is of exactly the same scope and character as the original draft convention adopted in 1929 and differs from it only in certain matters of technical detail. The present Act ratifies the Revised Draft Convention on behalf of India.

S 2 defines "the processes" as including all work which is required for or is incidental to the loading or unloading of cargo or fuel into or from a ship and is done on board the ship or alongside it. Under s 3 the Local Government may appoint Inspectors who are empowered by s 4 to enter any premises of ship where the processes are carried on and make such examination of the premises and ship and the machinery and gear used for the processes, and of any prescribed registers and notices, and may take on the spot or otherwise evidence of any person for carrying out the purposes of this Act. S 5 empowers the Governor General in Council to make certain regulations, e.g., regulations (1) providing for the safety of working places on shore and of any regular approaches over a dock, wharf, quay or similar premises which workers have to use and for the lighting and fencing of such places and approaches, (2) providing for the fencing of machinery, live electric conductors and steam pipes, (3) regulating the provision of safety appliances on derricks, cranes and winches.

20. The Indian Carriage by Air Act.—An International Convention for the unification of certain rules relating to international carriage by air was signed at Warsaw in October, 1929, by certain Governments. The Convention defines the liability of air carriers for injury or damage caused to passengers or goods. The

Convention was not signed on behalf of India but its provisions were examined by the Government of India and were found suitable to Indian conditions. The present Act gives effect to the Convention in British India (s 2). The Convention applies only in respect of international carriage by air, i.e. carriage between two States signatory to the Convention, but as there is no law on the subject in India, beyond the general law of contract and the law relating to carriers on land the Act empowers the Governor General in Council to make rules extending the provisions of the Convention also to internal carriage by air (s 4). The rules contained in the First Schedule to the Act are the provisions of the Convention relating to the rights and liabilities of carriers, passengers, consignors, consignees and other persons. Under rule 17 the carrier is liable for damage sustained in the event of the death or wounding of a passenger or any other bodily injury suffered by a passenger if the accident which caused the damage so sustained took place on board the aircraft or in the course of any of the operations of embarking or disembarking. The carrier is liable under rule 18 (1) for damage sustained in the event of the destruction or loss of or damage to any registered luggage or any goods if the occurrence which caused the damage so sustained took place during the carriage by air. The carrier is liable for damage occasioned by delay in the carriage by air of passengers, luggage or goods. The carrier is not liable if he proves that he and his agents have taken all necessary measures to avoid the damage or that it was impossible for him or them to take such measures. In the carriage of goods and luggage the carrier is not liable if he proves that the damage was occasioned by negligent piloting or negligence in the handling of the aircraft or in navigation and that, in all other respects, he and his agents have taken all necessary measures to avoid the damage (r 20). Under r 21 if the carrier proves that the damage was caused by or contributed to by the negligence of the injured person the Court may exonerate the carrier wholly or partly from his liability. In the carriage of passengers the liability of the carrier for each passenger is limited to the sum of 1,25,000 francs. By special contract, the carrier and the passenger may agree to a higher limit of liability. In the carriage of registered luggage and of goods the liability of the carrier is limited to a sum of 250 francs per kilogram. As regards objects of which the passenger takes charge himself the liability of the carrier is limited to 5,000 francs per passenger (r 22). The sum in francs to be converted into rupees at the rate of exchange prevailing on the date on which the amount of damages to be paid by the carrier is ascertained by the Court [s 2 (5)]. Under r 23 any provision tending to relieve the carrier of liability or to fix a lower limit than that which is laid down in these rules is null and void. The rules contained in the Second Schedule determine the persons by whom and for whose benefit and the manner in which the liability of a carrier in respect of the death of a passenger may be enforced.

21. The Sea Customs (Amendment) Act.—Under s 42 of the Sea Customs Act, 1878, a drawback of seven-eighths of the customs duty paid on goods on importation is repayable at the

time of re-export of the goods subject to certain conditions. This provision was originally intended to apply to merchandise imported for sale in order that goods remaining unsold in this country might be sent for disposal in other markets without the handicap of a tax. In practice, however, the concession was allowed even in respect of goods which have passed into use after import in violation of the ordinary accepted principle that customs duty is a tax on consumption. In many cases—e.g., cars and cinematograph films the goods spend much or most of their useful life in this country within the period allowed before re-exportation under claim for drawback. The Government of India felt that the grant of drawback on used goods was wrong in principle and they decided that the payment of such drawback should be discontinued except in special cases to be prescribed by rules made in this behalf. The present Act gives effect to this decision by amending the original Act. The Governor General in Council, under s. 2, may make rules, in respect of goods which have been taken into use between importation and re-exportation, (a) modifying the amount of duty to be paid as drawback or (b) prohibiting the repayment of duty as drawback or (c) varying the conditions for the grant of drawback by restricting the period after importation within which the goods must be re-exported.

22. The Indian Aircraft Act.—Aerial navigation in British India, before the passing of the present Act, was governed by the Indian Aircraft Act, 1911. In 1919 an International Convention was signed by the plenipotentiaries of 27 countries, with the object of establishing regulations of universal application and of encouraging peaceful intercourse with nations by means of aerial communications. To this Convention India was a signatory. The Convention deals with all questions relating to international aerial navigation, and also provides for the institution of a permanent International Commission for Air Navigation, with very wide powers as regards the formulation of rules, the marking of aircraft, the grant of certificates, rules of the air and so forth. This Commission meets from time to time to amend the annexes of the Convention, which contain the detailed rules to be observed by the aircraft of all signatory States and by all aircraft when within the borders of those States. The present Act enlarges the rule-making powers of the Governor General in Council in order to meet modern developments, enables Government to give full effect to the provisions of the International Convention and its annexes and provides for certain other matters on which legislation has become necessary. The Indian Aircraft Act 1911, is repealed.

23. The Mechanical Lighters (Excise Duty) Act.—With the imposition of a considerable duty on matches an abnormal development of the use of mechanical lighters is anticipated. This would mean a loss of duty and interference with the business of the Indian match manufacturing industry. The present Act therefore imposes an excise duty, at the rate of one rupee and eight annas per lighter on every mechanical lighter manufactured in British India. The customs duty leviable on these is also correspondingly enhanced.

24. The Repealing and Amending Act.—The present Act makes some necessary amendments of a formal nature in certain enactments specified in the First Schedule to the Act and repeals certain enactments to the extent mentioned in the Second Schedule.

25. The Factories Act.—The Royal Commission on Labour in India made a number of recommendations for the amendment of the Indian Factories Act, 1911. These were published with their Report in July 1931. After examining these in detail, the Government of India drafted a bill to replace the Indian Factories Act, 1911, which embodied the great majority of the proposals and included some other alterations that experience had shown to be desirable. The present Act is based on the Labour Commission's recommendations and the suggestions offered by associations of employers and employed and like organizations. The following are some of the recommendations of the Labour Commission which have received legislative sanction. S. 16 is designed to protect workers against the effects of excessive heat. The Chief Inspector may serve or give the Manager of a factory an order in writing specifying the measures which should be adopted if it appears to him that the cooling properties of the air in the factory are at times insufficient to secure workers against injury to health or against serious discomfort. S. 34 reduces the working hours of adult workers to 54 hours in a week in non-seasonal factories and to 60 hours in seasonal factories. In the proviso a special exception is made in favour of factories where the processes must go on throughout the day, such as factories providing electric power and light, waterworks, etc. S. 36 reduces the hours for adult work in non-seasonal factories from 11 to 10 hours in a day. S. 54 imposes restrictions on the working hours of a child. A child cannot be allowed to work in a factory for more than five hours in a day. The hours of work of a child must be so arranged that they do not spread over more than seven and a half hours in any day.

26. The Bengal Criminal Law Amendment Supplementary (Extending) Act.—The Bengal Criminal Law Amendment (Supplementary) Act, 1932, empowers the Local Government, with the previous sanction of the Governor General in Council, to make an order committing to custody in a jail outside Bengal any person against whom an order under s. 2 of the Bengal Criminal Law Amendment Act, 1930, might be made. The Supplementary Act expires in April 1935. The present Act removes the time limit in the original Act and makes it permanent.

27. The Assam Criminal Law Amendment (Supplementary) Act.—S. 15 of the Assam Criminal Law Amendment Act, 1934 purports to give jurisdiction to the High Court of Judicature at Port William in Bengal to entertain appeals from persons convicted by Commissioners under that Act, and to provide for the disposal of such appeals in that Court and for the confirmation by that Court of sentences of death passed by Commissioners. S. 29 of the Act purports *inter alia* to bar the exercise in respect of persons arrested or detained in custody under the Act of the powers exercisable by the High Court under s. 491 of the Code

of Criminal Procedure, 1898. As a local Legislature cannot affect the jurisdiction of a High Court established under the Government of India Act, the present Act re-enacts these provisions

28. The Indian Rubber Control Act.—In view of the catastrophic fall in the price of rubber in recent years and the consequent difficulties with which rubber producers have been faced, representatives of the industry in the main rubber-producing countries, namely India, Ceylon, Malaya, British North Borneo, the Dutch East Indies, French Indo-China, Sarawak and Siam formulated an international scheme for the restriction of the export, production and stocks of rubber. The Governments of the territories concerned also entered into an agreement to take effective steps to put the scheme into operation. The main features of the scheme were—(1) that the restriction scheme should remain in force in the first instance up to the 31st December 1938, and its continuation thereafter should be subject to a review of the position by the Governments concerned, (2) that, during the currency of the scheme, the exports of rubber should be restricted to certain percentages of predetermined basic quotas; (3) that the import of rubber should be prohibited except under license, (4) that the stocks of rubber held by owners should be restricted, (5) that existing areas under rubber should not be extended except for exclusively experimental purposes, and in such cases only up to a maximum of one quarter of one per cent of the areas under rubber at the date of commencement of the restriction scheme and (6) that the replanting of areas under rubber should be restricted to a maximum of ten per cent of the area under rubber at the date of commencement of the scheme during each control year, and to 20 per cent during the whole currency of the scheme. The present Act gives legislative sanction to this scheme.

29. The Indian Income-tax (Amendment) Act.—In accordance with s. 27 of the English Finance Act, 1920, the United Kingdom grants a refund to a doubly taxed assessee (a) at a rate equal to one half of the United Kingdom rate of tax, or (b) at a rate equal to the Indian rate of tax, whichever is less. The relief given by British India is regulated by s. 49 of the Indian Income-tax Act, 1922, which provides that where the relief obtained in the United Kingdom is at a rate less than the Indian rate of tax, the assessee obtains a refund to cover the difference subject to a minimum of one half the Indian rate of tax. Owing to recent increases in the Indian rate of taxation coupled with the recent reduction in the British rate of Income-tax from five shillings to four shillings six pence in the pound, in certain cases the effective rate of Indian income-tax is greater than the effective rate of United Kingdom income-tax. In these cases s. 49 of the Indian Act has the effect of leaving the assessee after he has obtained refunds both in the United Kingdom and in India, liable to an amount of tax which is less than if he had been taxed singly at the higher rate. The present Act therefore provides that when the income doubly taxed has obtained relief in the United Kingdom the balance of relief obtainable in British India does not exceed the

difference between the rate at which relief was obtained and the rate at which the tax was paid in that one of the two countries in which the rate of taxation was lower.

30. The Petroleum Act.—The Indian Petroleum Act, 1899, was passed at a time when the use of petroleum, particularly of dangerous petroleum or petrol was limited and with the great developments in the use of petroleum that have taken place in the last thirty years it became unsuitable in several ways. As early as 1903 the attention of the Government of India was drawn to the inconvenience arising from the existence in different provinces of separate sets of rules to regulate the importation, possession and transport of petroleum. The original Act did not permit the issue by the Government of India of a set of rules applicable throughout British India and the only way in which it was possible to secure uniformity was by the issue by Local Governments from time to time of similar rules with the sanction of the Central Government. The present Act transfers the rule-making powers to the Central Government.

The Act applies to the whole of British India [S. 1 (2)]. S. 2 defines "petroleum" as any liquid hydro-carbon or mixture of hydro-carbon, and any inflammable mixture (liquid, viscous or solid) containing any liquid hydro-carbon. "To transport" petroleum means to move petroleum from one place to another in British India, and includes moving from one place to another in British India by sea or across territory in India which is not part of British India. Ss. 3 and 4 provide for control over the import, transport and storage of petroleum by empowering the Governor General in Council to make rules in this behalf. Under s. 8 no license is needed for the import, transport or storage of dangerous petroleum not intended for sale if the total quantity does not exceed six gallons. S. 9 contains exemptions intended for owners of motor conveyances and stationary engines. Clause (a) exempts petroleum kept in a tank in a motor conveyance or an internal combustion engine from the requirement of a license. Clause (b) allows the owner of a motor conveyance or engine to keep a stock of spare petroleum not exceeding 20 gallons. Ss. 14 to 22 deal with the testing of petroleum. Ss. 23 to 28 contain the necessary penal provisions. Under s. 23 the punishment for contravening the provisions of this Act is a fine of five hundred rupees for the first offence and a fine up to two thousand rupees for every subsequent offence.

31. The Iron and Steel Duties Act.—The protection offered to the steel industry in India by the Steel Industry (Protection) Act, 1927, as subsequently amended, expired on the 31st October 1934. In accordance with the provisions of that Act an enquiry as to the extent, if any, to which it was necessary to continue protection to the industry and as to the manner in which any protection found necessary should be conferred, was made by the Tariff Board. The present Act gives effect to the protective measures recommended by the Board. The recommendations of the Board involved a very considerable reduction in the level of import duties in certain important cases with a resultant reduction in the revenue derived

from duties of customs. S. 4 of the Act therefore, imposes an excise duty of four rupees per ton on all steel ingots produced in British India and s. 6 provides for a countervailing customs duty equivalent to the excise duty on steel ingots. This countervailing duty is additional to the protective duties recommended by the Board and alternative to the *ad valorem* revenue duties on articles in respect of which protection was not proposed. The new duties came into operation on November 1, 1934.

32. The Indian Tariff Act.—The present Act consolidates the existing provisions of law into one measure thereby enabling the whole or parts of some fifty Acts to be repealed. The schedule of import tariffs exhibits as far as possible the actual rate of duty payable on each article under the tariff law for the time being, the only duties not included being those imposed by the Salt (Additional Import Duty) Act, 1931. The items subject to duty have been re-arranged upon a scientific plan enabling any particular item to be found without the use of an index and affording a suitable basis for future modification or supplementary legislation.

33. The Indian Army (Amendment) Act.—This Act, by amending the Indian Army Act, 1911, provides for the changes in the constitution of the Indian Army rendered necessary by the progressive Indianization of the Defence Forces of India. A new class of Indian Officer commissioned from the Indian Military Academy is about to appear. These officers, designated "Indian Commissioned Officers," will possess with respect to the Indian Army all the powers and privileges of the British Officers whom they will gradually replace. The original Act is so amended that complete provision for the whole

Indian personnel of the Indian Army, including this new class of officers, is contained in the Indian Army Act, in the same way that provision for the Indian Air Force is contained in the Indian Air Force Act, 1932. In order to distinguish this new class of officer from the officers designated "Indian Officers" in the original Act under s. 3 of the present Act they are known as "Viceroy's Commissioned Officers."

34. The Indian Navy (Discipline) Act.—S. 66 of the Government of India Act empowers the Indian Legislature to apply the British Naval Discipline Act (29 & 30 Vic. c. 109) to the naval forces raised by the Governor General in Council. It further empowers the Indian Legislature, in applying the British Naval Discipline Act to the forces and ships raised and provided by the Governor General in Council, to make such modifications and adaptations in the Act as it may think fit in order to adapt the Act to the circumstances of India. The present Act contains the changes in the British Naval Discipline Act that appear necessary to carry out this object and render its provisions suitable to Indian conditions. The Act also provides for the discipline of the members of the Volunteer Reserve hitherto provided for by the Indian Marine (Amendment) Act, 1933 which is now repealed.

35. The Amending Act.—This Act is the outcome of the previous enactment which provides for the application of the British Naval Discipline Act to the Indian Army. It is essential that members of the Indian Army should have the same civil rights and liabilities as the personnel of His Majesty's Military and Air Forces. The present Act, therefore, makes formal amendments to certain existing laws to attain this object.

COPYRIGHT.

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material

modifications of them in their applications translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, i.e., written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, printed, reduced to writing or otherwise graphically produced or reproduced."

India and the League of Nations.

India is a Founder-Member of the League of Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923 and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty the King Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self-Governing Dominions. India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire she joined in the Paris Peace Negotiations in 1918-19. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para. 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexes may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para. 11 of article I, on the admission of members other than original members. She will so long as the present constitution of the League endures, remain the only member which is not self-governing. As a member of the League, India was for the first time brought into direct and formal contact with the outside world as a separate entity.

She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude.

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1920 at the Genoa Maritime Conference when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929 showed, "It has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it. "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred in some instances, it brings her into conflict with His Majesty's Government. In 1923, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M.'s Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts. If he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League, International Conferences, including the Washington Conference on Naval Armaments in 1921, in Geneva Economic Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, e.g. the governing body of the International Labour Office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. It is interesting to note that since 1921 Sir Atul Chatterjee has been acting as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932.

The **Personnel of the Indian Delegation** has from the outset largely been Indian in race, though owing to the constitutional organization of the Indian administration it has frequently been necessary for her to be represented by Englishmen. This has especially been the case when specialized experts were required. The Indian character of the personnel has as rapidly as possible been increased and in 1929 the Indian Delegation to the annual Assembly of the League was for the first time led by an Indian (The Hon'ble Sir Mohammed Habibullah, Member for Education, Health and Lands in the Executive Council of His Excellency the Viceroy and Governor-General). In the following year the delegation was led by the Maharaja of Bikaner in 1931 by Sir B. L. Mitter, in 1932 by H. H. the Aga Khan, and in 1933 by Sir B. L. Mitter again. A convention has been established for the leadership being held by an Indian. While the delegations to the International Labour Conference are becoming almost entirely Indian in personnel, the workers' delegations always have been Indian. This is merely an expression of the general policy of the Secretary of State that an increasing

number of Indians should be given the opportunity of being trained in the international field. An example of the increasing part being played by Indians in League work occurred in 1930 when, during the Assembly of that year and at the instance of Sir Jehangir Coyaji, a member of the Indian delegation, an important resolution was passed in reference to the need for an inquiry into world depression. The Indian Delegation to the League Assembly in 1932 consisted of H. H. the Aga Khan (Leader), Sir Prabhushankar Pattani (President of Bhavnagar State Council), Sir Denys Bray (Member of the Council of India), Members, and Sir Johangir Coyaji (Head of the Department of History, Economics and Politics, Andhra University). In 1933, the Indian Delegation consisted of Sir B. L. Mitter (Leader), Sir Denys Bray, Sir Abul-Hasan Ali Khan of Rampur and Sir Hormusji Mehta of Bombay. The 1934 Delegation included H. H. the Aga Khan (Leader), Sir Denys Bray, Sir V. P. Krishnamachari (Member of Baroda) and Sir Homi Mehta, M.C.S. (Substitute Delegate).

The Secretary of State in his Memorandum to the Parliamentary Statutory Commission wrote—"India's membership of the League has had the effect of stimulating her national self-consciousness and has laid the foundations of an informed public interest in international affairs. India's representatives have not confined themselves merely to the role of spectators, but have played a prominent part in many of the meetings which they have attended. She has fully justified her position as a separate Member of the League by her co-operation in the economic and social spheres which form so large a part of its activities. But in certain questions where special Indian interests are involved, the Indian Delegation can and does take an independent line, and may even find itself in opposition to other parts of the Empire. But sometimes on non-political questions the British and Indian Delegations have remained in opposite camps. On such questions, when special Indian interests are at stake, India's right of independent action extends to speaking and voting against the views advanced on behalf of His Majesty's Government." Lord Reading, in a note at the end of his Viceroyalty, stated his conclusion that the system of consultation between the Secretary of State and the Government of India had worked satisfactorily and that the Government of India, without any definition of its problematic rights, already in practice obtained all the advantages which it might claim.

The year 1932 saw the opening of a League of Nations **Bureau in Bombay** in response to the demands of successive delegations to Geneva. Its purpose is to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together. The Bureau is maintained by the League of Nations without any contribution by the Government of India.

In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva.

Labour in India.

Growth of the Labour Problem. India is and has always been a pre-eminently and predominantly agricultural country and over 70 per cent of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks its contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphasised. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary occupation during periods of prolonged industrial disputes. The figures for the 1911 Census show that the number of persons gainfully occupied in the whole of India amounts to 154 millions or 43·8 per cent of the total population. Of this number 68 per cent are men and 32 per cent women. The proportion of the working population, i. e. earners and working dependants, engaged in agriculture is over 102 millions or 66·4 per cent.

The emergence of Indian industrial labour, as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided, for purposes of broad generalisation, into four periods: (1) from 1880 to 1915; (2) from 1916 to 1921; (3) from 1922 to 1927, and (4) from 1928 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 58 to 275 and the number of persons employed from 40,000 to 260,000. The total number of jute mills rose from 22 to 65 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immobile, earnings in agricultural pursuits were extremely low, commodities were comparatively cheap, and industrialists were able to get all the labour they wanted by tapping the adjacent villages at any rates of wages they liked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory, child labour was exploited, and little thought was given to the human element behind the machine. Hours of work were excessive. No amenities were provided because the only thing that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The Factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a

factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from the capital invested.

The second period emerged soon after the outbreak of the great war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and materials to the various seats of war. Heavy demands were made by the belligerent countries for raw products. India secured the opportunity for which she had been looking for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices soared. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of India. Labour was still considered to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an Utopia. Big commercial and industrial enterprises were floated. Agriculturists were securing high prices for their produce. Labour was in great demand not only in agriculture but also in commerce and industry. The successes which labour met with during the war in demands for increases in rates of wages impelled them to demand further increases with each increase in the cost of living. Where demands were not granted strikes were threatened. The influenza epidemic of 1918 which swept away large masses of the population of the country created a big gap in the available supply of labour, and almost all the strikes of the period for increases in wages were successful owing partly to the necessity for speeding up production and partly to the shortage in the available supply of labour.

The gradual demobilisation of the Armies of the War and the closing up of the various Munitions Works disbanded tens of thousands of men and women who rapidly spent the savings secured during the War. The pre-war industries in the belligerent countries could not be reorganised at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of this period of reaction and depression and the beginning of the third period in the history of Indian industrial labour. Labour all over the world demanded an improvement in the conditions of life and work. The creation of an International Organisation to deal with all questions connected with labour from an

International point of view and the commitment of India, as one of the signatories to the Treaty of Versailles, to the ratification and acceptance, as far as possible, of the Conventions and Recommendations adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating labour conditions. The beginning of this period, therefore, saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1923 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1926.

The depression in trade and industry which set in in 1922 continued, interspersed with a few short spells of transitory revivals, almost right down to the middle of the year 1934 since when there are apparent the beginnings of a definite return to prosperity. Various attempts were made by all classes of Industrialists to reduce the wages of labour in order to reduce costs of production. Co-ordinated action taken by the Ahmedabad Mill-owners' Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cent with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent being agreed to after a general strike lasting more than two months. A similar attempt made by the Bombay Mill-owners' Association in 1925 to reduce wages by 14 per cent was, however, frustrated by a strike lasting for nearly three months which was eventually settled in favour of the workers by a maintenance of the existing rates on the removal of the Excise Duty of 3 per cent on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Council. Similar attempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were made to effect reductions in wages. There were several reasons for this. The most important of these was that after the period of the decline in prices had set in after 1920 real wages, in comparison with the standard of life of the year 1914, began to improve and labour was determined not to let go the advantage gained in the struggles immediately following the end of the War. This period was one in which a considerable number of Acts in connection with labour were placed on the Statute Book. In addition to these, the Government of India had asked Provincial Governments to consider proposals for legislating with regard to prompter payment of wages. The enquiries held in 1926-27 into the question of Deductions from Wages or Payments in respect of fines indicated legislation on the lines of the Truck Acts. It was becoming obvious to the Industrial Employer that Government were most anxious to do all they could to improve labour conditions in India. The employers, as a whole, therefore, did not desire to precipitate matters by insisting on reduction in wages. It was imperative, however, that something should be done, and done quickly to reduce costs of production. The only way to do this without reducing wages was, in the view of the employers, to ask the

worker to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce his Wages Bill.

The fourth period beginning with the year 1928, therefore, saw the advent of **Rationalisation** or more efficient methods of working. Employers, particularly those in Cotton Mills in Bombay city, proposed to ask workers to mind more machines in return for a compensatory increase in wages. Some advanced firms controlling cotton mill agencies actually introduced various efficiency measures in their mills. The introduction of these measures necessitated reductions in the numbers employed. The beginning of this period coincided with the entry of the Communists into the Trade Union movement in India.

When the so-called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress, they formed in January 1927 a **Workers and Peasants Party**, one of whose objects was "to promote the organisation of trade unions and to wrest them from their alien control." Communist emissaries were sent out to India by the Third International to further war against Imperialism, to secure destruction of capital and to sow the seed of revolution. The Workers and Peasants Party started a paper called the "Krant" (Revolution) in May 1927 which, however, had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928, but their attempts to bring about a general strike in the cotton mills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr. N. M. Joshi in January, 1926. When another great group of mills in Bombay under the agency of Messrs. Currimbhoy Ebrahim and Sons sought to introduce efficient methods of work, the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the 16th April 1928, and the Communists, with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing, intimidation and stone throwing in all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal discussions in another Union of cotton mill workers called the Girm Kamgar Mahamandal, they secured the support of Mr. A. A. Alwe, its President, and formed a new Union called the **Bombay Girm Kamgar Union** on the executive of which several prominent Communists were appointed. The Communists revived the publication of their paper the "Krant" and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand-bills, in capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal-Nagpur Railway at Kharasahi. They actively associated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipal

lities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 6th October, 1928, they endeavoured to paralyse the cotton mill industry in Bombay by calling several lightning strikes in individual mills on the flimsiest of pretexts, even though the terms of the settlement of that strike required that all disputes between the employers and employed on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 3rd February 1929 and which resulted in the death of 149 persons and the destruction of property. The **Riots Enquiry Committee** appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Girm Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the Girm Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike, although not so complete in character as the strike of 1928, nevertheless lasted from 20th April to 18th September, 1929, and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Girm Kamgar Union. But the Communist group was able to capture the **Indian Trade Union Congress** at the 11th Session held in Nagpur and to force the moderate elements, consisting of Messrs. Diwan Chaman Lal, N. M. Joshi, B. Shiva Rao, V. V. Giri, R. R. Bakhale, etc., to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and the International Labour Conference, by appointing the Workmen's Welfare League, a Communist organisation in England, as their Agents for Great Britain, for the declaration of Independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the **Communist menace in India**. The object of the Communists is not so much the welfare of labour as the spread of evolution. Their ultimate aim is the destruction of capital and the replacement of the established Government by a dictatorship of the proletariat. The manner in which they achieve this is by penetrating trade unions, by calling strikes in industries, by unduly prolonging them, by putting up strings of preposterous and absurd demands, by refusing conciliation or arbitration; and by sending masses of workers seething with discontent into the districts to preach their gospels of class

hatred and class war to the ignorant masses in the villages of India. Fortunately for industry thirty of the more prominent and avowed Communists all over India were arrested in March 1929 under Section 121-A of the Indian Penal Code for organised conspiracy, under the direction of the Communist International and other Associated bodies, to deprive the King of the Sovereignty of British India. The trial of these 30 persons in what is now historically known as the famous Meerut Conspiracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr. Justice, the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison, three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. All the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Sessions Judge of Meerut reduced to three years' imprisonment. The convictions of three persons were maintained to the extent that their sentences were reduced to the terms of imprisonment already undergone by them and they were ordered to be released from jail. The convictions of nine persons were set aside and they were ordered to be released forthwith. Some of the prisoners who were released have made frantic efforts to regain their hold on Labour Unions. The good sense of the workers has prevailed in most cases, but the Communists have again succeeded in getting into some of the more important Unions—notably the Railway Unions, and they are again endeavouring to capture the workers in the Textile Industry in Bombay. In the absence of strong leadership there are, however, several factions in their camps and different groups are working in the same industry.

The depression in trade which set in about ten years ago reached its zenith during the year 1933. The industry most affected was the Textile. Several cotton mills in Bombay were closed down—some of them permanently and their machinery was scrapped. The failure of Messrs. Currimbhoy Ebrahim & Sons who controlled ten Mills, aggravated the position and tens of thousands of workers were thrown out of employment as a consequence of the closure of the Mills under this agency. In many other cases, the alternative to closure was reduction in the wages in the operatives and over fifty cotton mills of Bombay City reduced their dear food allowances of 80 per cent for male piece workers and 70 per cent for men time workers and all women by an average of about 25 per cent. One or two mills attempted working more machines to an individual with shorter hours of work, and, where workers refused, gave them the alternative of pre-war rates of wages for pre-war standards of work or more machines with higher pay. Strikes of comparatively short duration occurred in a few individual mills as a protest against these cuts in wages, but the absence of trade union organisation in the industry coupled with a fear of unemployment sent the workers back to work within a few days of their going out on strike.

The beginning of the year 1934, however, was darkened by threatening clouds presaging stiff fights between Capital and Labour in connexion with actual and threatened wage cuts. A Labour Committee was formed on an all-India basis to call a general strike in all Cotton Mills in India. This Committee, however, did not meet with much success except in Bombay and in Sholapur. In Sholapur all textile Mills were closed on account of this strike for over three months. In Bombay City more than half the Mills were affected for over two months. The Government of Bombay, as a result of the considerable amount of agitation carried on by labour leaders for a full enquiry by an impartial tribunal, decided that the Commissioner of Labour should hold a Departmental Enquiry into the whole question of wage cuts in textile Mills in the Bombay Presidency, and the institution of this enquiry was announced in the Bombay Legislative Council by the Hon'ble Sir Ghulam Hussain Hidayatullah, Leader of the

House, on the 26th February 1934. The Report of the Departmental enquiry was published on the 21st June of the same year and the strike in the Bombay Mills was called off practically simultaneously. This Report will be dealt with in some detail in several subsequent sections of this note.

The outstanding events of the year 1934 in the field of Labour were (1) the passing by the Government of India of the New Factories Act, (2) the first Asiatic Labour Conference held at Colombo, Ceylon on May 10th, 1934, attended by Labour representatives from India, Japan and Ceylon, (3) the publication of the Report of the Bombay Departmental enquiry into wage cuts, and (4) the passing by the Government of Bombay of the Trade Disputes Conciliation Act providing for the appointment of a Labour Officer to look after the interests of textile Mill workers and for conciliation in disputes by the Commissioners of Labour.

ROYAL COMMISSION ON INDIAN LABOUR.

The British Government, in consultation with the Government of India, appointed on 24th May, 1929, a Royal Commission "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on health, efficiency and standard of living of workers and on relations between employers and employed, and to make recommendations." The Royal Commission consisted of the late Right Honourable Mr J. H. Whitley as Chairman with the Rt Hon Mr Srinivasa Sastry, P.C., Sir Alexander Murray, Kt., C.B.E., Sir Ibrahim Rahimtoola, Kt., K.C.S.I., C.I.E., Sir Victor Sassoon, Bart., Dewan Chaman Lal, M.L.A., Miss Beryl M. Le Power Power, Deputy Chief Inspector, Trade Boards, England, and Messrs N. M. Joshi, M.L.A., A. G. Clow, C.I.E., I.C.S., G. D. Birla, M.L.A., Kabeer-ud-din Ahmed, M.L.A., and John Cliff, Assistant General Secretary, Transport and Railway Workers Union, England, as members, and with Messrs S. Lall, I.C.S., and A. Dhillon from the India Office, London, as Joint Secretaries. Mr J. H. Green, M.B.E., was Assistant Secretary. Lt.-Col. A. J. H. Russell, C.B.E., I.M.S., was subsequently appointed as a Medical Assessor and Mr S. R. Deshpande B. Litt. (Oxon), Assistant Commissioner of Labour, Government of Bombay, was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the Railways and Associations of Employers and Employed left for England on the 22nd March 1930. The Commission returned on the 11th October 1930 and after touring Ceylon and Burma went to Delhi in November.

The Report of the Commission was published in June 1931 and is a document of first rate importance which will be the text-book of social legislation and labour welfare in India for many years to come. Moreover, the value of its recommendations is enhanced by the fact that they are practically unanimous and represent the considered opinion of employers, workers

legislators and officials, all of whom were represented on the Commission. Every aspect of the labour problem in India has been considered and discussed and the recommendations number many hundreds and cover a very wide field.

A summary containing the principal recommendations of the Royal Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India, in the Department of Industries and Labour, classified these recommendations under six different groups according as they involved or required (1) Central legislation, (2) Administrative action by the Government of India, (3) Provincial legislation, (4) Administrative action by Local Governments and Administrations, (5) Action by public bodies, e.g., Municipalities, Universities, etc., and (6) Action by employers and their organisations or by Workers, Unions, and the recommendations so grouped were forwarded by the Government of India to all Local Governments and Administrations under cover of a circular letter, dated the 30th September 1931, with a request that Provincial Governments should give careful consideration and examination to those recommendations in connexion with which they were required to initiate provincial legislation or to take administrative action and to bring such recommendations as fell within the last two groups to the attention of public bodies and organisations of the employers and the employed concerned. The Government of India published about the end of the year 1932, a first Report showing the action taken by the Provincial Governments up to the 15th July 1932, and by the Central Government up to the 30th September 1932 on the recommendations made by the Commission. A second Report showing the action taken by Provincial Governments up to the end of July 1933 and by the Central Government up to the end of October 1933 was published in February 1934. Owing mainly to financial stringency, Provincial Governments have so far attempted little local legislation implementing the Commission's recommendations.

but the Government of India have not only passed nine Acts—(1) Act II of 1932 repealing the Employers and Disputes Act, 1860, (2) the Tea Districts Emigrant Labour Act, 1932 which replaces the Assam Labour and Emigration Act, 1901, as amended by the Amending Acts of 1908, 1915 and 1927, and which came into force on the 1st April 1933, (3) the Trade Disputes Amendment Act, 1932 (4) the Children (Pledging of Labour) Act, 1933, (5) the Land Acquisition (Amendment) Act, 1933, (6) the Workmen's Compensation (Amendment) Act, 1933 (7) The Factories Act, 1934 consolidating and amending the law regulating labour in factories, (8) the Trade Disputes Amendment Act, 1934, and (9) the Indian Dock-Labourers Act, 1934, giving effect in British India to the convention adopted at Geneva in 1912 concerning the protection against accidents of workers employed in loading or unloading of ships, but they have also drawn up two other Bills for (1) securing prompter payments of wages and for controlling deductions from wages in respect of fines, and (2) amending the Indian Mines Act, 1923, for certain purposes, especially for reducing the statutory limits of hours of work in Mines. The Government of India have also submitted proposals to Local Governments and Administrations for instituting new legislation in connexion with the following matters—

- (1) Employees' Liability (Re "Common Employment" and "Assumed Risk"),
- (2) Extension of Workmen's Compensation to Agriculture and Forestry,
- (3) Making illegal the Besetting of an Industrial Establishment for the recovery of debts,
- (4) Fixation of Hours of Work for Dock Labourers,
- (5) Allotment of Seamen's Wages,
- (6) Exemption of Salaries and Wages from Attachment
- (7) Shortening wage periods, and
- (8) Arrest and Imprisonment for Debt

The Royal Commission made several recommendations for the control of those factories which do not use power and which are at present not regulated. The Government of India are at present engaged in formulating proposals for a new and a separate Act for the regulation of such factories. Other matters are to be shortly taken up. For a more detailed knowledge of the action taken administratively by the Provincial Governments, Public Bodies and Employers' and Workers' Organisations, the reader is referred to the two reports referred to above published by the Government of India as it is obviously impossible to give a recital of such matters in a compact book of reference such as the *Indian Year Book*. But, as it might be of considerable interest to the users of the *Year Book* to have a summary of the legislative proposals already put through or at present under consideration readily available, we propose to substitute in place of the summary referred to above, summaries of the more important changes already effected or proposed to be made in the near future. Other important recommendations made by the Royal Commission have

also been included in the various chapters into which this note is divided. The changes effected in connexion with the Workmen's Compensation Act, 1923. The Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1928 and 1931 and the changes proposed in connexion with other existing labour legislation and Recruitment for Assam will be dealt with under the various headings into which this chapter is divided. Summaries of the proposals for new or other legislation already enacted are given below—

New and Proposed Labour Legislation.

Proposal to make Besetting an Industrial Establishment for the purpose of collecting debts a criminal and cognisable offence—

One of the several recommendations of the Royal Commission is that the besetting of an industrial establishment for the purpose of collecting debts should be made a criminal and cognisable offence. In this connexion the Government of India invited the views of all Local Governments and Administrations in the Department of Industries and Labour. Circular letters, dated the 27th August, 1932. The Government of India pointed out that the proposal aims at preventing two practices associated with the recovery of debts from industrial workers. One of these is the system whereby money-lenders are permitted by some employers to enter the factory and to collect their dues before the workman receives his pay. The other practice is for the money-lender to wait outside the factory gate and to secure payment before the workman can put with any portion of his wages. The objection to both these practices is that they tend to make the payment of interest and the repayment of debts the first charge on wages. When the dues are collected within the factory the workman has, as a rule, no means of resisting the deduction, and when the dues are collected at the gate an element of intimidation not infrequently enters into the transaction. The Government of India recognise that the Commission's proposal does not go far enough as it relates only to action in or near an industrial establishment, but it appears to them to offer the possibility of stamping out the practice of recovering private debts at the pay desk and of checking at least the power of the money-lender to make his demands a first charge on industrial wages. As such the Government of India were disposed provisionally to support the proposal. Replies from the Local Governments were asked to be submitted by the 1st January 1933. After a careful consideration of the views of the local Governments and the interested public the Government of India have come to the conclusion that central legislation on the subject is not called for. The Government of India, however suggested to the Government of Bengal, where both official and non-official opinion is strongly in favour of the proposed measure, to undertake provincial legislation on the lines recommended by the Commission restricted to a typical industrial area in the first instance. The Government of Bengal, accordingly, introduced a Bill in the Bengal Legislative Council in December 1934 with a few to giving to this recommendation. The Principal Section of the Bill provides that "whoever offends at or near

any Mine; dock, wharf or jetty; railway station or yard, or premises whereon any manufacturing process is carried on, in such manner or in such circumstances as to afford just grounds for suspicion that he is so loitering with a view to recover any debt from any workman employed in such Mine, etc., shall be punished with imprisonment which may extend to six months or with fine of both. Proposals to undertake similar legislation in other Provinces are under the consideration of some other local Governments.

The Prohibition of the Pledging of the Labour of Children.—The Royal Commission found evidence in such widely separated areas as Amritsar, Ahmedabad and Madras of the practice of pledging child labour, that is, the taking of advances by parents or guardians on agreements, written or oral, pledging the labour of their children. In some cases the children so pledged were subjected to particularly unsatisfactory working conditions. The Commission considered that the State would be justified in adopting strong measures to eradicate the evil. The Government of India accepted this recommendation and introduced a Bill in the Legislative Assembly in 1932, proposing to impose penalties on parties to agreements pledging the labour of children and on persons knowingly employing children whose labour has been pledged. The Select Committee on the bill introduced an important modification by providing that "an agreement to pledge the labour of a child which is made without detriment to a child and not made in consideration of any benefit other than reasonable wages to be paid for the child's services, and terminable at not more than a week's notice will not be an agreement within the meaning of the definition of such an agreement. The Bill was passed by the Central Legislature in February 1933, under the title of "Children (Pledging of Labour) Act." Sections 2 and 3 of the Act were to be brought into operation at once and the whole of the Act with effect from 1st July 1933.

Employers' Liability (Re: "Common Employment" and "Assumed Risk").—At page 315 of their Report, the Commission recommend that a measure should be enacted abrogating for all workmen the defences of "common employment" and "assumed risk" in civil suits for damages arising out of employment. Persons injured by accident may have a remedy by a suit for damages against their employers in the civil court, and it has been suggested that the law there applicable is inequitable because two defences may be evolved by the employer to defeat claims which he should justly be called upon to meet. One is the defence of "common employment" by which an employer can plead that an accident was due to the default of a fellow-workman and the other is the defence of "assumed risk" by which an employer is not liable for injury caused to workmen through the ordinary risks of employment, and a workman is presumed to have assumed risks which were apparent when he entered upon his occupation. When the Indian Workmen's Compensation Act was first introduced, it had, in addition to the provisions for workmen's compensation,

clauses designed to abrogate these defences in certain cases; but the Joint Select Committee of the Legislature deleted the clauses in question apparently because they were not satisfied that the doctrines, which were derived from the British Common Law, would be accepted by Indian courts. They observed at the same time that if the doctrines in question were so accepted and were regarded as inequitable, they should be removed for all workmen and not for the limited classes to which the Workmen's Compensation Bill was to apply. There is little evidence to show that the existing position gives rise to hardship, but it is possible that suits are not pursued because of the admitted ambiguity of the law, and the Royal Commission were of opinion that, as the defences in question are inequitable, there is need for ensuring that they cannot be invoked. The majority recommended that a measure for this purpose should be enacted and that it might follow the lines of the clauses deleted in 1923, but should, of course, be applicable to all workmen.

The Government of India in the Department of Industries and Labour issued a circular letter, dated the 3rd February 1932, addressed to all Local Governments of Governors' Provinces and the Chief Commissioners of Delhi and Ajmer-Merwara on the subject. The Government of India pointed out that the two main objections taken by the majority of the Select Committee to the proposal were (1) that it was uncertain that the Courts would accept the defences which the doctrines were designed to remove; and (2) that if the defences were inequitable they should be removed for all workmen and not only for specified classes. The latter objection, in their opinion, is met by the Commission's proposal. As regards the former, they state that the cases of the kind to which the proposed law would be applicable are naturally rare, but that in the only reported case which they have been able to trace (9 A L J 173) the doctrine of common employment was unhesitatingly applied. The Government of India incline to the opinion that the defences in question are inequitable and they are therefore not disposed to attach much weight to the fact that they are seldom likely to be invoked or to any remaining doubt that there may be as to the readiness of the Courts to apply them. The clarification of the law would in itself be, in their view, an advantage and they were disposed to favour legislation on the lines proposed by the Commission. The Government of India however requested that Local Governments should consider the possibility of limiting the scope of the law so as to exclude all workmen covered by the Workmen's Compensation Act, or, alternatively, to include only such of these workmen who are in receipt of more than Rs 300 per month. The whole question was re-examined by the Government of India in light of the replies received from local Governments and they have decided to defer legislation on the subject for the present.

Amendment of the Land Acquisition Act, 1894.—A Bill further to amend the Land Acquisition Act, 1894, for certain purposes was introduced in the Legislative Assembly on the 12th September 1932. It was decided during

the debate that the Bill should be circulated for purpose of eliciting opinion thereon. The Government of India, accordingly, circulated a Bill for opinion to all Local Governments and Administrations under cover of Legislative Assembly Department Letter, dated the 29th September 1932. It was based on the proposal of the Royal Commission on Indian Labour that the Land Acquisition Act be so amended as to enable land to be acquired when it is intended for the housing of labour either by companies or by other employers. The Royal Commission stated that in a number of instances brought to their notice land suitable for the development of housing schemes had been held at ransom by the owners, and that fantastic values were placed upon it as the result of the construction of factories and other industrial concerns in the neighbourhood. The provision of adequate housing for workmen is one of the urgent needs of industry and this Bill sought to give effect to that recommendation. The Bill was passed by the Indian Legislature in September 1933 under the title of the 'Land Acquisition (Amendment) Act 1933.'

Hours of Work of Dock Labourers—

There is at present no legal restriction on the hours of work of dock labour in India, and the Royal Commission who examined this question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 33 1/3 percent over ordinary rates. The Government of India have not been able to arrive at any definite conclusions regarding the practicability of controlling the hours of work in the present conditions of dock labour in India and feel a difficulty as to the form which the necessary legislation should take if the recommendations are finally accepted. They therefore addressed a circular letter in November 1932 to Local Governments who control Ports, major or minor, asking them to examine the question and to furnish the Government of India with their views. The Government of India have pointed out in their circular letter that if the necessary legislation takes the form of an amendment or an amplification of the Indian Ports Act, 1908, it would be straining the scope of the Act thereby, and that if it be framed as a separate Act there would be difficulties in the use of the term "employer" and in framing penal sections. They are disposed to the view that the most suitable method of giving statutory effect to the recommendations would be to amend the Indian Factories Act on the analogy of the Factory and Workshop Act, 1901, of the United Kingdom, expanding the scope of the term "factory" so as to include docks, wharves, quays, etc.

The circular letter of the Government of India also raises the question of minimum age for the employment of children in ports. As a result of the consideration given to the Washington Convention fixing the minimum age for admission of children to industrial employment, the Indian Legislature passed an Act in 1922 making it obligatory on Local Governments to frame rules under the Indian Ports Act of 1908 prohibiting the employment of children

under the age of 12 years "upon the handling of goods at piers, jetties, landing places, wharves, quays, docks, warehouses and sheds." This enactment did not prevent children below the prescribed age being employed on the waterside of the ship as it was not clear whether the Act prohibited such employment or not. The matter was put beyond doubt by a subsequent amending Act which covered all employment in handling of goods in any port subject to this Act. The Royal Commission considered that work of this kind is not suitable for children and a system of half time working is not practicable. They therefore recommended that the minimum age should be raised to 14 years. The Government of India are provisionally in agreement with this recommendation and also with another which suggests that the enforcement of these provisions should be entrusted to the factory inspection staff. Local Governments with major or minor Ports were asked to submit opinions after consulting the interests concerned. The majority of bodies consulted were not in favour of legislation regarding hours of work for dock labourers but favoured the raising of the minimum age of children employed within the limits of Ports. The whole matter is still under consideration of the Government of India in the Department of Commerce.

Exemption of Salaries and Wages from Attachment

The Royal Commission have made several recommendations in connexion with the indebtedness of industrial workers and have suggested various methods not only for reducing such indebtedness but also to protect the workers from unnecessary harassment in the matter of the repayment of their debts. Their first recommendation in this connexion refers to the recovery of debts through employers. The Commission state that under the Civil Procedure Code it is possible for a money-lender to secure the attachment of the wages of any one who is not a labourer or a domestic servant and they understand that the majority of workers in industry would not be regarded as labourers within the meaning of the Act. But in respect of certain classes of employees, particularly railway servants and the servants of local authorities, the law allows the money-lender to use the employer as his debt collector to a much larger extent. In such cases it is possible to attach half of the employee's salary or the amount by which that salary exceeds twenty rupees a month whichever is less. In some cases private employers are required to make similar recoveries although the legality of this is doubtful. Thus in the case of an employee in receipt of a regular salary, the money-lender can secure an order directing the railway administration to hand over, month by month, a large part of the employee's salary until the whole decree has been covered—a period which extends in some cases to years rather than months. The comparative security of railway service further increases the attraction of the railway servant for the money-lender, and all the evidence received by the Commission goes to show that the level of indebtedness in terms of wages is higher among railway servants than among industrial employees as a whole. The Commission, therefore, recommended that the

salary and wages of every workmen receiving less than Rs 300 a month be exempted entirely from the possibility of attachment. II, on examination, there are found to be objections to applying this exemption to every one employed on a salary less than Rs 300 a month, the Commission consider that the definition of "workman" in the Workmen's Compensation Act might be suitable.

The Government of India in the Department of Industries and Labour issued a circular letter dated the 25th November 1932 to all Local Governments and Administrations inviting an expression of their views on the subject. The Government of India are of opinion that the Commission were disposed to favour the grant of such exemption to all persons receiving less than Rs. 300 a month, and they, therefore, consider that it is desirable to review the questions generally, and not solely with regard to industrial employees. Replies to their letter were asked to be submitted by the 1st April 1933. The opinions received have been examined and the question of undertaking legislation is under consideration.

Arrest and Imprisonment for Debt--

On page 232 of their Report, the Royal Commission recommend that, at least so far as industrial workers in receipt of wages or salary amounting to less than Rs 100 per month are concerned, arrest and imprisonment for debt should be abolished except where the debtor has been proved to be both able and unwilling to pay. The terms of the recommendation suggests that the Commission would have favoured a more general abolition for arrest and imprisonment for debt had their terms of reference been wider.

The present law on the subject is contained in Sections 51 and 55 to 59 of the Civil Procedure Code read with rules 37 to 40 in Order XXI. Under the substantive provisions of the Code a judgment-debtor other than a woman may be arrested and detained in prison in execution of a decree. But under rule 37, Order XXI, a court may, in lieu of issuing a warrant of arrest, issue a notice calling upon the judgment debtor to show cause why he should not be detained. Under rule 40 the Court may disallow his arrest and detention. There is thus no obligation on the Court at any stage to order either the arrest or the imprisonment of a debtor who is genuinely unable to pay, but when a judgment debtor is brought to court the burden of proving that he is unable to pay rests on him.

The important question for consideration is whether imprisonment for debt (where there is no contumacy) should be abolished generally. This question has been considered on various occasions in the past notably in the years 1881-83. Opinion on the subject was deeply divided but the Government of India reached the conclusion that imprisonment for debt where no fraud was proved should disappear from the Indian Statute-book as soon as the conditions of the country permitted it. This consideration led to the passing of the Debtors Act, 1888 by virtue of which imprisonment for debt was abolished in the case of female debtors and in

the case of other debtors the courts were granted a discretion which they did not previously enjoy to refuse to issue a warrant of arrest at the pleasure of a decree-holder and also to order the release of debtors who were genuinely unable to pay. No appreciable advance has been made since 1888 for the elimination of imprisonment of debt.

Following the recommendations of the Royal Commission the Government of India have given careful consideration to the various questions involved and they issued a comprehensive circular letter on the subject to various local governments for their opinions. Replies were asked for by the 30th November 1933 and the question whether arrest and imprisonment for debt where no contumacy is proved should be abolished either generally or for particular classes of persons is being considered by the Government of India.

The Government of India is examining the possibility of undertaking legislation on an experimental scale restricted to the province of Delhi in the first instance regarding the Labour Commissions' recommendation that legislation should be enacted providing a summary procedure for the liquidation of workers' unsecured debts. The proposals are that (a) the court should be required to estimate the probable income and reasonable expenditure of the worker during the ensuing two years; (b) the amount of the debt should be based on the difference between the two sums; (c) it should not be possible to keep the decree alive for more than three years in all; (d) debts should rank preferentially in order of their age; and (e) the possibility of appointing special courts for summary liquidation proceedings should be considered.

Bombay Money-Lender's Bill.—The Bombay Legislative Council at its meeting on 16th March 1934 granted leave to Mr Syed Munawar to introduce his Bill to regulate the money lending business. In the Statement of Objects and Reasons, Mr Munawar stated that despite the steady growth of the Co-operative movement in the Bombay Presidency, professional money-lenders known as "Sowcars" flourish in every town and village. Except for a small proportion of them who are honest a very big number has acquired a reputation for dishonesty, usury and other malpractices easily practised on the poor and illiterate labouring classes. It is common knowledge that interest at unconscionably high rates ranging from 24 to 300 per cent is charged. That the first months interest is deducted from the principal before issuing the loan and that the dues are recovered under threats of violence. The Usurious Loans Act, 1918, provides a legal remedy but this applies only to such cases of usury as are referred to courts of law and consequently many money-lenders manipulate accounts of loans in such a ingenious manner as to evade the provisions of the existing law on the subject. The purpose of the Bill is to be an adjunct to the usurious Loans Act by imposing both a legal check upon unscrupulous money-lending as also upon reckless borrowing. Its main object is to provide a satisfactory method of accounting and submission of periodic statements to the debtors. The Bill only

covers loans upto Rs 1,000. A motion for the reference of the Bill to Select Committee was put during the Budget Session of the Bombay Legislative Council in 1935 and was lost.

Extension of Workmen's Compensation to Agriculture and Industry.—In their recommendation No 234, the Royal Commission suggested that the question of the inclusion of persons employed by the larger agricultural employers and of those employed in reserved forests deserves examination. The Government of India addressed a circular letter dated the 21st December 1931 to all Local Governments and Administrations inviting their views on the subject after consulting the interests concerned. Replies were requested by the 1st June 1932. In the light of the replies received, the Government of India arrived at the conclusion that no action is desirable at present on the question of the inclusion in the Workmen's Compensation Act of persons employed by the larger agricultural employers. The proposal for the inclusion of fresh employees is still under consideration.

Payment of Wages and Deductions. The recommendations of the Royal Commission on Indian Labour in connection with the disbursement of wages fall under three distinct categories: (1) Prompter payments, (2) a legal limitation of the wage period, and (3) the control of deductions from wages in respect of fines. The Government of India have implemented the Commission's recommendations under the first and the third heads and they introduced the Payment of Wages Bill in the Legislative Assembly on the 1st February 1933. A motion for the circulation of the Bill was moved on the 14th February and was adopted. The Bill was then forwarded to all Local Governments and Administrations for opinion after consulting the interests concerned. A motion for the reference of the Bill to a Select Committee was tabled during the Delhi Session of 1933-34 but was not reached and the Bill lapsed. The Government of India took this opportunity of revising the original Bill throughout in the light of the criticisms received when the original Bill was circulated and a new Bill was introduced in the Legislative Assembly on the 13th February 1935. A motion for the reference of the Bill to a Select Committee was adopted on the 18th February 1935. The new Bill, if passed by the Legislature will be one of the most important pieces of Social Legislation put through in India. We reproduce below the more important provisions of the Bill.

(1) The whole Act is proposed to be applied to all factory workers and the whole Act except the clauses relating to prompt payment of wages to all railway employees. Local Governments are, however, to be empowered to extend the Act, subject to such relaxations as they may consider necessary to any class of persons employed in any industrial establishment or in any class or group of industrial establishments.

(2) The operation of the Act is limited to persons whose earnings in any one month amount to less than Rs 100.

(3) The definition of "wages" has been amplified to cover all remuneration which is capable of being expressed in terms of money and which is, in accordance with the terms of employment or by any contract express or implied, to be paid to any person employed in

consideration of his employment or of any work done in his employment but does not include (a) the value of any housing provided by the employer, (b) employer's contributions to Provident funds, (c) travelling allowances and gratuities payable on discharge and, (d) any terms paid to an employee for defraying Special expenses entailed on him by the nature of his employment. This definition will prevent employers from endeavouring to get round the Act by setting aside certain portions of wages as bonuses for good attendance or for good work.

(4) Section 5 of the Payment of wages Bill requires that wages in all factories controlled by the Indian Factories Act shall be paid before the expiry of the seventh day from the last day of the wage period in which the wages have been earned, unless the seventh day is a non-working day in which case wages should be paid on the first working day subsequent to such non-working day. Where the employment of any person is terminated by or on behalf of the employer, the wages due are to be paid before the expiry of the second day from the day on which his employment terminated.

As several factories, particularly cotton and jute mills, require considerable time to calculate earnings from piece rates of wages. The Bill empowers Local Governments, if they are satisfied that owing to special difficulties relating to the calculation or distribution of wages any employer or class of employers cannot with reasonable diligence make payment within the time specified, to exempt, by general or special order to such extent and subject to such conditions as it may think fit such employer or class of employers from the operation of this Section, provided, however, that, notwithstanding any such exemption, such portion of any wages due as can be paid without undue risk of overpayment shall be paid within the period fixed for payment. No provision is made in the Bill for the prompt payment of wages to those workers who terminate their employment themselves with or without giving notice, nor have the Government of India accepted the recommendation made by the Labour Commission that a week's notice on either side should be made legally binding both for the employers and the employed. Omission to provide for these matters raises a moot point as to whether the Common Law of Master and Servant with regard to contracts of employment is to stand or whether the new Bill is intended to set such law aside.

(5) The deductions which an employer can make from the wages due to his workmen are defined in Section 6 of the Bill which states that notwithstanding the provisions of sub-section (2) of Section 47 of the Indian Railways Act, 1890, or of any other law for the time being in force, the wages due to an employed person shall be paid to him without deductions of any kind except those authorised by the Act. Deductions which are authorised by the Act may be of the following kinds:

(a) deductions by way of fine, permitted only under special notices to be posted in all factories, limited to six pias in every rupee of earnings during the month in which the fine or fines were imposed and not recoverable more than 60 days from the time a fine has imposed

(b) deductions for damage to or loss of goods expressly entrusted to the employed person for custody, or for loss of money for which he is required to account where such damage or loss is directly attributable to his neglect or default. Deductions under this head must not exceed the amount of the damage or loss caused to the employee by the neglect or default of the employed person. It is also not intended to permit deductions under this head in respect of damage or loss occurring in the course of a manufacturing process, e.g., in respect of Spoilt cloth.

(c) deductions in respect of housing accommodation provided by the employees.

(d) deductions in respect of such other services supplied by the employees as the Government in Council or the Local Government or the prescribed authority may by general or special order authorise.

(e) deductions in respect of recoveries of advances given before or during employment, the former being permitted only from the first wage payment.

(f) deductions on account of Income Tax, prohibitory orders from Courts of law, subscriptions to and repayments of advances taken from Provident Fund accounts, and

(g) deductions on account of payments to Co-operative Credit Societies approved by the Local Government, subject to such limits as the Local Government may impose.

(h) In accordance with rule-making powers Local Government may prescribe the acts or omissions on the part of an employed person for which fines may be imposed, and all deductions by way of fine and all realisations thereof are to be recorded in a register to be kept by the employees in such form as may be prescribed. All realisations of fines are to be expended only on such purposes beneficial to the persons employed in the factory or establishment as are approved by the prescribed authority. No deductions can be made for housing accommodation provided by the employer unless such accommodation has been accepted by him and it must not exceed an amount equivalent of the service rendered. No deductions by way of fine are permitted in case of children under fifteen years of age. No deductions are also permitted for tools and materials unless a Local Government specially authorises them under rule 4.

The Act in the first instance is intended to cover all factory workers and railway employees but the latter are to be exempted from the operation of that part of the Bill

which deals with prompter payment of wages. Local Governments, however, have power to extend the Act to any class of industrial undertakings. The administration of the Act is to be in the hands of the Factory Department for factories and the Supervisors of Railway Labour for railway employees. Regarding procedure and penalties, Local Governments are authorised to appoint Magistrates or other persons as primary courts for the hearing of complaints regarding claims. These primary courts can award compensation up to ten times the amount of the claim in respect of fine or deduction and up to Rs. 10 in the case of undue delay in payment of due wages. Penal proceeding against an employer can only be launched with the sanction of the prescribed authority and only if the claim in the past instance has been successful. The penalties for offences under the Act are fines up to Rs. 500 and for offences under the Rules to be framed under the Act up to Rs. 100. No contracting out of the Act is to be permitted and appeals are permitted.

With regard to the fixation of shorter wage periods of a week or a fortnight, the Government of India did not feel that they were on the same ground as they were with regard to prompter payments and the control of deductions and they have therefore made no provision in the Payment of Wages Bill to cover this matter. Instead, they addressed a circular letter to all Local Governments, asking for opinions on the subject of the advisability of legislating for shorter wage periods. Replies to this circular letter were required to be submitted by the 30th October 1933. It is understood that where the monthly wage period exists the workers themselves are against the introduction of a shorter period as they are afraid that unless there is a universal change in accounting from monthly to fortnightly or weekly the shorter wage period will not be of any material benefit and that on the other hand weekly or fortnightly rents might be higher in total incidence than monthly rents and that in large towns like Bombay the flittier workers will squander away their earnings more rapidly with quicker payments. The replies submitted by the various Local Governments to the Government of India are under consideration by that Government.

The modifications and amendments suggested by the Royal Commission on Indian Labour with regard to existing labour legislation and the extent to which they have been implemented will be dealt with in the respective sections dealing with the separate subjects.

INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief Industrial States in the world. The grounds on which this claim was based are stated in the Memorandum prepared by the India Office which gave the following figures to illustrate the industrial importance of the country —

“28,000,000 agricultural workers (excluding peasant proprietors), 111,000 maritime workers, lascars, etc., a figure second only to that for the United Kingdom; over 20,000,000 workers in industries, including cottage industries, mines and

transport; railway mileage in excess of that in every country except the United States.”

The figures for the 1931 Population Census for India show that the number of Agricultural Labourers has increased to nearly 3½ million. This figure excludes cultivating owners (27 million), Cultivating Tenants (34 million), Landlords (3½ million) and others (6½ million). The number of earners plus working dependants, in Industry, Trade, Transport and Mines amounts to twenty six millions. Nearly eleven Million persons are employed as domestic servants.

Factory Labour.

489

The latest figures for the numbers employed in factories are those available in the All-India Report for Factories for 1933, which are reproduced in summary form in the tables given below —

Growth of Factories.

Year	Number of Factories	Average Daily Number of Persons Employed.
1922	5,144	1,361,002
1923	5,985	1,409,173
1924	6,406	1,455,592
1925	6,926	1,494,958
1926	7,251	1,518,391
1927	7,515	1,533,382
1928	7,863	1,520,315
1929	8,129	1,553,169
1930	8,148	1,528,302
1931	8,143	1,438,487
1932	8,241	1,419,711
1933	8,452	1,403,212

Age and Sex Distribution of Factory Labour

Year	Men	Women	Children	Total.
1922	1,086,457	206,887	67,658	1,361,002
1923	1,113,508	221,045	74,620	1,409,173
1924	1,147,729	235,332	72,531	1,455,592
1925	1,178,719	247,514	68,725	1,494,958
1926	1,208,628	249,669	60,094	1,518,391
1927	1,222,662	253,158	57,562	1,533,382
1928	1,216,471	252,933	50,911	1,520,315
1929	1,249,165	257,161	46,843	1,553,169
1930	1,225,425	251,905	37,972	1,528,302
1931	1,373,372	231,183	26,932	1,431,487
1932	1,172,296	225,632	21,783	1,419,711
1933	1,167,244	216,837	19,091	1,403,212

Statistics for 1933 (1) By Provinces.

Province	Number of Factories	Average Daily Number of Persons Employed.
Madras	1,503	137,775
Bombay	1,610	354,637
Bengal	1,528	455,018
United Provinces	476	112,693
Punjab	576	47,972
Burma	942	86,433
Bihar and Orissa	289	72,254
Central Provinces and Berar	735	61,781
Assam	649	44,309
North-West Frontier Province	26	1,312
Baluchistan	16	2,318
Hyderabad-Merwara	39	13,259
Delhi	41	11,726
Bangalore and Coorg	22	1,725
Total	8,452	1,403,212

Statistics for 1933 (2) By Classes of Concerns

Class of Concerns	Number of Factories		Average Daily Number of Persons Employed	
	Perennial	Seasonal	Perennial	Seasonal
Government and Local Fund Factories	337	6	115,370	312
Textiles	513		627,761	
<i>Cotton (Spinning and Weaving)</i>	315		360,424	
<i>Jute Mills</i>	98		257,175	
Engineering	631		115,133	
<i>Railway Workshops</i>	84		48,782	
Minerals and Metals	139		44,671	
Food, Drink and Tobacco	1,027	2,295	53,829	157,686
Chemicals and Dyes, etc	397	41	43,585	1,034
Paper and Printing	385		30,962	
Processes relating to glass, wood and stone	367	1	33,147	91
Processes connected with Skins and Hides	45		5,975	
Gins and Presses	3	2,169	107	160,688
Miscellaneous	89	7	10,089	172
Total	3,933	4,519	1,082,629	320,583

In 1931 for the first time since the publication of the above statistics the figures for the number of factories and the persons employed are classified according to perennial and seasonal

factories. In 1932, the total number of perennial factories amounted to 3,802 with 1,120,510 workers and the number of seasonal factories amounted to 1,439 with 299,201 workers.

MIGRATION.

The principal occupation of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high it is generally in the small units. Thus Delhi has 41 per cent of immigrants and Ajmere-Merwara 19, while in Ajmere City itself there are as many immigrants as there are natives.

Immigration influences the population of India as a whole very little. The 1931 census shows only 730,562 persons as born outside the country as against 603,526 in 1921. As against this must be set off on account of emigration about one million persons who are estimated to have migrated during the decade 1921-1931.

As between the different provinces of India however migration is of more importance, varying in British India from 1,244,249 (net) immigrants into Assam to 15.5% (net) immigrants grants into the North West Frontier Province. In Assam immigration is the highest among all the provinces in India. On the other hand immigration from Bihar and Orissa is the greatest. In the past the tendency was for migration to take place from the Native States to British India but during the decade 1921-1931 this position has been reversed and the trend of migration has been on the whole from British India to the States, where the density is generally lower. Among the States, Bikaner provides a most striking example of immigration from British India. In 1931, the number of immigrants in Bikaner was 161,303 or 58 per cent of its increase in population. Of the immigrants about 54 per cent, were from British India.

Internal migration is of several kinds: (1) *casual migration*, involving minor movements between neighbouring villages, (2) *Temporary migration* which is mainly due to demand for labour on canals and public buildings and to

pilgrimages and fairs, (3) *Periodic migration* which is caused by recurring seasonal demands, (4) *Semi-permanent migration* is that of persons who maintain constant contact with their homes, although earning their livelihood elsewhere, such persons often leaving their families at their native places during the period of migration where they themselves ultimately return from the place of migration, and (5) *Permanent migration* is that in which the migrants leave one place for another for good. In addition mention may be made here of another form of migration which may be called *daily*.

The best example of casual migration is furnished by the Punjab and Delhi. Periodic migration is particularly heavy at harvest time and also at the changes of season when traders, herdsmen, graziers and labourers from Kabul, Baluchistan, Kashmir and the hills move down to the plains for the winter months. Temporary migration continues throughout the year.

Within the Provinces—It is neither necessary nor feasible to deal with the various streams of migration between district and district of the same province or within a district. These movements vary according to times and seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centres draw their labour force.

Assam's immigration is generally speaking of the permanent type. There have however been some changes since 1921 in respect of the sources of Assam's labour supply. Madras is the only province showing any increase in emigration to Assam while there has been a great decrease in emigration to Assam from Bihar and Orissa. There has been a steady increase in labour obtained locally, indicating greater freedom of

fluidity. On the other hand the whole complexion of the population of Assam is being altered by the permanent immigrants from Mymensingh in Bengal. The third class of immigrant in Assam is the *Nehali* but their numbers are decreasing.

Bihar and Orissa is typical of the rest of India in its immobility of labour, 959 persons out of every 1000 being born therein. It has, however, a higher emigration figure than any other province. The net loss to the province by emigration is 17,58,000. As in the case of Assam here also a change is however taking place and the loss by emigration is considerably less than in the previous decade. Emigrants have decreased by 1,97,000 and immigrants have increased by 79,000.

In the case of the United Provinces emigration has increased by a net balance of 1,58,000.

Madras is the third highest province so far as emigration is concerned but its emigration is

mostly overseas. The 1931 figures show a very marked increase in emigration to Malaya.

In the Central Provinces there is a growth in 'Daily Migration'.

As between British and State Territory migration in 1921 was against the States and in favour of British India but this position was reversed in 1931. Whereas in 1921 the net loss to the States was 1,24,000, in 1931 the States gained 4,90,935 from British India.

As between British India and the French and Portuguese settlements the balance of migration is greatly in favour of British India.

The two most important countries for Indian emigration are Malaya and Ceylon. Recruiting of Indian labour to Malaya was however stopped in 1930. None the less in 1931 over 6 lakhs Indians were found in that country. In the case of Ceylon immigration of Indian labourers continued in spite of the slump in the tea and rubber industries.

OCCUPATIONS OF THE PEOPLE.

At the 1931 Census several changes were made as regards the collection and presentation of occupational statistics. The principal amongst these was that a complete compilation of figures of subsidiary occupations was attempted for the first time. The Census however shows that instead of the proportion of non-working dependants to workers having been reduced by the new distinction between earners and working dependants, the proportion of non-working dependants has actually increased. Thus, while in 1921 out of every 100 persons 46 were workers and 54 dependants, in 1931, 44

were workers and 56 dependants. This increasing dependence is attributed partly to the difficulty of finding employment.

The proportion of earners to working dependants is about nine to two, i.e., of the total working population 81.4 per cent. is in direct receipt of wages or other sources of income and the other 18.6 per cent. are helpers of the wage-earners.

The following table shows the distribution of occupations per 10,000 livelihoods according to classes and sub-classes.

Class and sub-classes	Means of subsistence	Total	Principal Occupation.		Dependent Occupation		Subsidiary Occupation.	
			Males	Females	Males	Females	Males	Females
A, B, C & D	All Occupations	10,000	5,772	1,649	454	1,242	673	211
A	Production of raw materials	6,584	4,081	1,103	344	610	375	71
I	Exploitation of animals and vegetation	6,560	4,066	1,099	343	610	372	70
II	Exploitation of minerals	24	15	4	1		3	1
B	Preparation and supply of material substances	1,756	1,054	305	54	104	202	37
III	Industry	1,038	610	193	30	76	108	21
IV	Transport	165	118	10	7	4	24	2
V	Trade	553	326	102	17	24	70	14
C	Public administration and liberal arts	286	210	18	11	4	38	2
VI	Public force	56	49				6	
VII	Public administration	69	55	2	2	1	9	
VIII	Professions and liberal arts	161	106	16	11		23	2
D	Miscellaneous	1,371	427	223	42	523	58	102
IX	Persons living on their income	16	9	2	1		4	
X	Domestic service	751	107	53	17	169	14	91
XI	Insufficiently described occupations	503	280	142	12	46	34	9
XII	Unproductive ..	104	51	26	12	8	6	1

The following table compares the distribution of occupations in 1931 with that disclosed by the 1921 census —

Class of sub-class	Means of subsistence	Distribution of 10,000 workers in	
		1921.	1932
A	Production of raw materials	7,241	6,734
I	Exploitation of animals and vegetation	7,217	6,711
II	Exploitation of minerals	24	23
B	Preparation and supply of material substances	1,759	1,665
III	Industry	1,075	997
IV	Transport	134	153
V	Trade	550	515
C	Public administration and liberal arts	289	269
VI	Public force	71	55
VII	Public administration	69	64
VIII	Professions and liberal arts	143	150
D	Miscellaneous	717	1,332
IX	Persons living on their income	13	14
X	Domestic service	173	708
XI	Insufficiently described occupations	406	505
X	Unproductive	125	105

Some of the differences revealed by the above table between 1921 and 1931 are no doubt due to changes in classification. But it is possible that the greater prevalence of unemployment in 1931 as compared to 1921 has contributed to the diversion of returns from definite to indefinite categories. A close examination of the detailed figures in the report however tends to show that there is a general tendency towards increase in what may be described as modernized occupations.

Among careers in principal occupations the number of females per 1,000 careers is 222. Among working dependants on the other hand females number 733 to 267 males, while if principal and dependent occupations are taken together, the proportion of actual female workers to male is 317 to 683 in every 1,000.

During the 1931 census special returns from factories were not called for. It is seen, however, that the number of workers employed in organized factories is extraordinarily low for a population of the size of that of India, being only 15,53,169. The All-India figure for persons

occupied in plantations, mines, industry and transport in 1921 was 21,239,555 while in 1931 it was 26,187,689.

Pasture and agriculture occupies 71 per cent of the actual workers of India, or, if those who follow it only as a subsidiary occupation are excluded it accounts for 67 per cent. Industry occupies 10 per cent of India's workers as compared to 11 per cent in 1921. The one industrial order in which a marked increase has taken place is production and transmission of physical force. Trade shows a decrease and so do 'professions and public force'. There has however been an increase in the categories 'private income' and 'domestic service'.

The 1931 census report contains an interesting analysis of castes by occupation. It shows that in the majority of cases about half the males retain their traditional occupation. About a quarter or less of the half of those that have abandoned their hereditary occupations as their principal means of subsistence retain them as subsidiary.

RECRUITMENT OF LABOUR.

The methods adopted for the recruitment of labour in India have received general condemnation even from employers and the Whitley Commission has much to say on the subject.

Recruitment, except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors, or direct at the mill or factory gates. The difficulties in connexion with recruitment are due (1) to the want of a stable labour force at any particular town or centre, (2) to the general illiteracy of the Indian labourer, and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home.

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebtedness of the peasant and also by occasional bad harvests, but in addition he not infrequently indulges in fraud and misrepresentation by painting a rosy picture of the future that awaits the peasant in a town with its crowded bazaars and other amusements which are absent in the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himself from his pecuniary difficulties. The contractor retains some form of control over his recruits and takes good care to recover the amount of the advance together with interest, which is

generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump-sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported that labour is actually purchased from private contractors at so much per head. The system of recruitment by contractors is most in use in Burma, owing to the scarcity of labour in that province and the necessity of recruitment from distant places.

The method of recruitment through Sardars is also dependent on the payment of advances which are however made at the cost of the employer. The Sardar is an operative already at work in the mill or plantation and is sent out to recruit labour from among his relations, acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. On the other hand, it does not infrequently happen, especially in the Tea Gardens in Assam, that the Sardar remits persons who are lured away from their homes by prospects of a bright future and who, on arrival, find that conditions of work and wages are not so bright as they imagined. It is, however, only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill-gate or at the pithead in the case of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very much higher rates of wages paid in towns (which to the villager sounds fabulous as he has no idea of the higher cost of living) spreads throughout the countryside and draws large crowds of would-be workers. They are to be found at convenient gathering places on the thoroughfares waiting to be picked up for employment. The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation an easy matter. The employer does not recruit himself the men required for his establishment but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of the contractor and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him, and the labour brought by him forms his gang. He has to pay the labour *bucksheesh*, *khoraki* and travelling expenses, and for this purpose he frequently receives advances either

from the contractor or from the Company concerned. At the Bhowra Colliery advances varying from Rs. 3 to Rs. 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 pies per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 pies per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintain an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment is done in the literal sense of the word, but in the event of special qualifications being required and no applicants being available, the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recruitment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshopmen, a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

The Royal Commission on Indian Labour has made several recommendations with regard to the employment of the factory worker for the guidance of employers in general. We reproduce below some of the more important of these recommendations—

(a) Jobbers should be excluded from the engagement and dismissal of labour.

(b) Whenever the scale of the factory permits it, a Labour Officer should be appointed directly under the General Manager. His main functions should be in regard to engagements, dismissals and discharge.

(c) Where it is not possible to appoint a whole time Labour Officer, the Manager or some responsible officer should retain complete control of engagements and dismissals.

(d) Employers' Associations in co-operation with trade unions should adopt a common policy to stamp out bribery.

(e) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision throughout the factory.

(f) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to resume their old work. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

Messrs E D Sassoon & Co, who control eleven cotton textile mills in Bombay and the Burma-Shell Corporation, have appointed Special Labour Welfare Officers to recruit labourers and look after their welfare. The acute trade depression has, however, prevented a more general adoption of this system but several firms are making noteworthy attempts to improve existing methods of recruitment in factories.

Following the appointment, by the Government of Bombay, of a special Labour Officer (Mr W B Gilligan I.C.S.) under the Bombay Trades Disputes Conciliation Act, 1934, to watch the interests of workmen employed in cotton textile mills in Bombay City and the Bombay Suburban District with a view to promote harmonious relations between employer and workmen and to take steps to represent the grievances of workmen to employers for the purpose of obtaining their redress, the Millowners' Association Bombay, appointed, with effect from November 1st 1934 a special Labour Officer [Mr C A Dalal, B.Sc. (Econ.) (London)] to look after the interests of the Association.

Recruitment for Assam. The Assam Labour and Emigration Act, 1901, was designed mainly to regulate the recruitment and engagement of indentured labour. It had not been possible for some years for any worker in Assam to be subjected to a penal contract and, in consequence of this and other changes, the law became entirely unsuited to present conditions. Attempts were made by amending Acts in 1908, 1915 and 1927 to adapt the Act to meet altering conditions. Substantial parts of the original Act were repealed and large numbers of rules framed in an endeavour to use the Act to regulate the recruitment of emigrants who are subject to no indenture. These changes proved inadequate and they made the law extremely confused. Large parts of the surviving provisions of the Act became completely ineffective and those provisions which were operative were open to weighty criticisms.

During the years 1926-1928 the Government of India carried on consultations with the Local Governments in regard to amending the law governing recruitment of labour for the Assam tea gardens. In the meanwhile, the Royal Commission on Labour had been appointed and they collected a large amount of evidence on the subject. The Commission recommended the replacement of the existing legislation by a new enactment and suggested that the power conferred by section 3 of the Assam Labour and Emigration Act of 1901 to prohibit recruitment for Assam in particular localities should be withdrawn immediately. They recommended that the new Act should provide (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the Tea Industry or by suitable groups of employers and approved by the Local Government or by such authority as it may appoint; (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals, and (c)

that in the event of the recurrence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruiters. Another recommendation of the Commission was that the Assam Labour Board should be abolished and in its place the Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces. With regard to the question of repatriation, the Commission recommended that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense and that the Protector should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the ground of health, unsuitability of the work to his personal capacity or for other sufficient reason.

The Government of India framed a Bill called the Tea Districts Emigrant Labour Bill, based mainly on the recommendations of the Commission but with variations in respect of minor details. The Bill was introduced in the Legislative Assembly on the 11th March 1932 and was circulated to all Local Governments for opinion. It was then referred to a Select Committee who presented their Report to the Assembly on the 5th September 1932. The Bill as amended by the Select Committee was passed by the Indian Legislature in September 1932 and received the assent of the Governor-General on the 8th October 1932. The new Act came into operation from the 1st April 1933.

The Tea Districts Emigrant Labour Act, 1932, extends to the whole of British India including the Southall Parganas and repeals the Assam Labour and Emigration Act, 1901, and the subsequent amending Acts. The first object of the Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam Tea Gardens as may be justified and required by the interests of emigrants and potential emigrants, and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (Chapter III) or over both their recruitment and their forwarding as occasion may dictate (Chapters III and IV). Employers will be prevented from recruiting otherwise than by means of certificated *garden sirdars* or licensed recruiters. It is made unlawful to assist persons, under 16 to emigrate unless they are accompanied by their parents or guardians. With regard to the question of repatriation (Chapter II), every migrant labourer, on the expiry of a period of three years from the date of his entry into Assam, will have the right of repatriation as against the employer employing him at such expiry (Section 7), and any emigrant labourer who before the expiry of three years from his entry into Assam is dismissed by his employer otherwise than for wilful and serious misconduct will also have the right of repatriation (Section 8 (1)). It will also be possible to claim repatriation within three years in the event of the emigrant falling in health, not being provided

with suitable work or having his wages unjustly withheld or for any other sufficient cause (Section 10 (1)). Further, repatriation can be ordered at any time by a criminal court in the case of a labourer who has been assaulted by the employer or by his agent (Section 11). Where an employer fails to make all the necessary arrangements for the repatriation of a labourer working under him within fifteen days from the date on which a right of repatriation arises to an emigrant labourer the Controller may direct the employer concerned to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (Sections 13 and 15).

Section 3 of the Act makes provision for the appointment of a Controller of immigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish, and the charges are to be met from

an annual cess called the Emigrant Labour cess which shall be levied at such rate not exceeding Rs. 9 per each emigrant as the Governor-General in Council may, by a notification in the "Gazette of India," determine for each year of levy.

The provisions of the Act are intended to apply only to emigration for work on tea plantations in the eight specified districts in Assam in the first instance; but power is retained to extend its application to other industries and to other districts in Assam if necessary (Section 38).

Latest Statistics—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 1933 is the latest available. The Report shows that the total number of persons who immigrated into Assam during the year was 39,901, as against 50,997 in the previous year.

The following tables shows the number of immigrants into the province of Assam by age and sex groups for the last five years :-

Sex and age of Labourers	1928-29	1929-30	1930-31	1931-32	1932-33.
Men	37,161	33,510	30,245	23,247	15,412
Women	16,548	14,117	13,362	14,986	12,552
Children	15,191	12,699	9,912	12,764	11,917
Total	68,900	59,796	53,519	50,997	39,901

The birth rate in the Assam Valley Division was 36.41 as against 31.97 in the previous year and in the Surma Valley and Hill Division 32.82 as against 36.26. The death rates were 21.30 as against 22.10 and 19.69 as against 21.43 respectively. The total garden population rose by 17,000 during the year under report and stood at 1,080,490.

Reforms in the Bombay Cotton Mill Industry—In a circular letter dated the 8th January 1930 the Bombay Millowners' Association instructed all mills affiliated to the Association to introduce, wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service was also recommended. The certificates are to contain a record of the service of the operative concerned and in all cases of recruitment, the men presenting themselves for employment will be asked to produce their Discharge Certificates. Notices are to be posted at all mills stating (a) that all persons will be engaged by the Manager or by the head of the department concerned, and (b) that any heads of departments, assistants or jobbers

accepting bribes from the workpeople will be instantly dismissed.

Several groups of mills are considering the possibility of employing labour officers who will be responsible for the direct recruitment of labour and for welfare work generally. The action taken by Messrs. E. D. Sassoon & Co. in this connexion has already been referred to above.

As far as employment of substitute labour is concerned most concerns outside cotton textile mills keep a five to ten per cent. force of spare hands in addition to the regular numbers required on the musters. In textile mills substitute labour is engaged every morning at the gates. It is interesting to observe that Messrs. E. D. Sassoon & Co., for their ten mills in Bombay, and a few other employers in India have started the practice of "Dequalification" by which employment tickets are issued to a number of workers, generally about ten per cent. of the standard muster, and substitutes are engaged only from those who have such cards. By the adoption of this system the influence of the jobber is minimised and bribery made difficult. The system is one which deserves to be more generally adopted.

ABSENTEEISM AND LABOUR TURNOVER.

Though there is meagre statistical information available on this subject, it may be stated with a fair amount of accuracy that the Indian worker is more habituated to absent himself from work than his prototype in other countries. He has yet to get himself thoroughly adapted to the industrial environment in which he finds himself. The reasons for his absence are not always connected with his love of rest but in many cases absence is due to causes beyond his control such as sickness, domestic difficulties, etc. The effects which poor and indifferent housing have on his work will be dealt with in the section on Industrial Housing.

The Factory Labour Commission of 1907 made an inquiry into the number of absent workers and came to the conclusion that the average worker took 2 days off every month and a further holiday of from 3 to 7 weeks every year. In addition, he receives the weekly holiday and from 4 to 10 Indian holidays during the year. The question of absenteeism received the attention of the Indian Tariff Board (Cotton Textile Industry) and it was urged in evidence before them that the efficiency of labour in Bombay was greatly reduced by the high percentage of absenteeism among the operatives. The Board came to the conclusion that Ahmedabad had a great advantage over Bombay in the matter of absenteeism, both in respect of a

low rate throughout the year and also of the absence of the wide seasonal variations which were apparent in other centres of the textile industry. They therefore recommended that in order to minimise the effect of absenteeism there should be a general adoption of a system already in force in a few mills in Bombay under which a certain number of spare hands are entertained in each department, except the weaving. The Board said "The percentage of extra men in each department is not necessarily the same, but we were given to understand that spread over the whole of the mill, it usually worked out at about 10 per cent."

The Labour Office of the Government of Bombay publishes in the *Labour Gazette* every month statistics of absenteeism in the textile mills at the important centres of the cotton industry in the Bombay Presidency and in Engineering workshops of the Bombay and Karachi Port Trusts. If figures of absenteeism for each day during any month are examined it is found that they are higher on days immediately following pay day. The following table gives the figures for percentage absenteeism month by month for the year 1933 with averages for the whole year for cotton textile mills in three important centres of the Bombay Presidency.

PERCENTAGE ABSENTEEISM IN THE TEXTILE INDUSTRY DURING 1934.

Month	Bombay	Ahmedabad	Sholapur.
January	8 43	3 58	10 33
February	9 48	3 53	17 53
March	11 81	4 11	
April	8 56	3 91	
May		4 02	
June		3 80	20 10
July	6 93	3 76	17 19
August	8 10	4 02	12 31
September	8 46	4 35	13 16
October	7 84	4 08	14 46
November	7 32	3 52	14 57
December	7 40	3 77	15 14
Average for year	8 43	3 87	15 98

* Owing to the unsettled condition at these centres, no figures were compiled

Whereas the figures in the above table show monthly variations which depend upon seasonal conditions. The annual averages for the last ten years are as follows:

Year	Bombay	Ahmedabad.	Sholapur.
1925	13 78	2 98	11 48
1926	10 91	2 44	14 59
1927	8 54	3 04	13 07
1928	8 72	3 97	14 20
1929	9 79	3 53	14 79
1930	9 25	3 53	15 40
1931	9 31	4 20	16 26
1932	9 14	3 74	14 69
1933	9 23	3 61	14 29
1934	8 43	3 87	15 98

In the Electrical and Mechanical Departments of Railways, absenteeism generally amounts to 10 to 11 per cent. As in cotton mills, absenteeism is greater immediately after pay day. In Railways in Burma, absenteeism is lower and roughly amounts to 2 to 50 per cent.

Labour Turnover—A charge is very often levelled against the Indian worker that owing to his migratory character, he changes his place of employment very frequently and that this results in a high rate of labour turnover. There is, however, very little information available regarding the average period of service or the rates of turnover at important industrial centres in India. In the case of the Empress Mills at Nagpur, it has been estimated that since 1908, the average period of continuous service of the employees amounted to 7.89 years. In another cotton mill in the Central Provinces the average duration of employment worked out at about 40 months while in the case of other factories it roughly amounted to about 30 months. Out of a total number of 3,700 workers engaged in the Pench Valley Coal Mines it was found that 1,550 workers were in employment for less than a year, 650 from 1 to 2 years, 700 from 2 to 3 years and 800 workers had more than 3 years' continuous service to their credit. In the manganese mines in the Central Provinces the average duration of employment comes to about 9 to 10 months for the whole of the labour force in any one year. One to two years is on an average the period of employment of workers in the Tata Iron and Steel Works. The total labour turnover during normal working for three years in the same Works amounted to 36.6 per cent, 31.3 per cent and 21.1 per cent, respectively. In the Indian Cable and Construction Company in Bihar and Orissa, however, skilled labour has remained practically unchanged during the last five years but the unskilled workers recruited from the aboriginal class had changed to the extent of about 30 per cent. annually. In one of the mills at Cawnpore the average period of continuous service amounted to 8.87 years.

The Labour Office of the Government of Bombay recently conducted a special enquiry into the length of service of cotton mill workers in Bombay City. A sample of 1 in 10 tenements was decided upon and the information was collected in suitable schedules by the Lady Investigators of that Office from the inmates of such tenements who were reported to be cotton mill workers. Only the predominant working class localities were visited for the purposes of the enquiry and the total number of schedules accepted for final tabulation was 1,348.

Of the 1,348 workers, 988 or 73.29 per cent. were men and 360 or 26.71 per cent. were women.

Nearly 21 per cent of the operatives began work in the mills before the 15th year, 38 per cent. between the 15th and the 20th year, 32 per cent. between the 20th and the 30th year and the remaining 9 per cent. joined the first mill after they had attained the age of 30.

Sixty-three per cent of the workers were born in the Konkan and 27 per cent in the Deccan while the rest came from different parts of the country. It is very significant that not a single worker gave his place of origin as Bombay City.

About 48 per cent of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent served in two or three mills and 18 per cent. had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was "for going to native place" in 26 per cent cases, "low wages and for bettering prospects" in 21 per cent cases, "absence due to illness" in 14 per cent. cases and "retrenchment" in 10 per cent. cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non-attendance) was reported to be less than 5 years in 37.54 per cent cases, 5 to 10 years in 23.37 per cent cases, 10 to 15 years in 15.88 per cent cases, 15 to 20 years in 9.13 per cent cases and more than 20 years in 14.08 per cent cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years' service and 42 for workers with 5 to 10 years' service. In the other service groups, the percentage of operatives working in the same mill varied between 25 and 45.

The actual active service was reported to be less than 5 years in 46.51 per cent cases, 5 to 10 years in 21.26 per cent cases, 10 to 15 years in 13.95 per cent cases and 15 to 20 years in 7.20 per cent cases. In the remaining 8.08 per cent cases the actual service was more than 20 years.

A large number of workers in the age groups 15-20 and 20-25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent. of the workers had served for less than 5 years and 19 per cent for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those falling in each of the first five service groups was between 16 and 20 per cent.

LABOUR IN FACTORIES.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half, their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to 7 and their employment at night-time was forbidden; children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

The next Factory Act to be passed into law was Act XI of 1911. This Act extended the definition of "factory" so as to include seasonal factories working for less than 4 months in the year, shortened the hours within which children, and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton spinning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act, for the first time, applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than 12 hours in any one day." It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no women may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during 1921 and the Indian Factories Amendment Act, 1922, introduced a series of important reforms including the adoption of a 48-hours' week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions, etc. The principal object of the amending Act of 1923 was the removal of a difficulty which had arisen in con-

nection with the law relating to the weekly holiday. The Factories Amendment Act of 1926 was passed in order (1) to widen the definition of "factories" so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc.; (2) to prevent the issue of age certificates by Certifying Surgeons to children who are not fit for employment, (3) to make provision for the prevention of cleaning machinery in motion, even by men, in cases where Local Governments were of opinion that the work is attended by danger to the operatives, (4) to provide a clearer definition of the periods prescribed for intervals of rest, and, (5) while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

The Indian Factories Act 1911, as amended by the Acts of 1922, 1923 and 1925, prescribed a daily as well as a weekly limit to the hours of work in factories and provided for rest intervals and for a weekly holiday. Section 28 of the Act provided that no person should be employed in any factory for more than 11 hours in any one day; and Section 27 that no person should be employed in a factory for more than 60 hours in any one week. Section 21 of the Act made it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each, at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval could be reduced to half an hour for each male person provided that he was not employed for more than 8½ hours on each working day and was not required to work for more than five hours continuously. For children, Section 23 (c) provided that no child should be employed in a factory for more than 6 hours in any one day. Section 21 (b) provided that for each child working more than 5½ hours in any one day a period of rest of not less than half an hour should be given and the period of rest was to be so fixed that no child should be required to work continuously for more than 4 hours. Sections 23 (b) and 24 (a) further provided that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child could not be employed in two factories on the same day but adults could be so employed in such circumstances as might be prescribed. Under the provisions of Section 20 every Manager of a factory had to fix specified hours for the employment of each person employed in such factory and no person was allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and the Central Provinces were the only Local Governments which had prescribed the circumstances under which adults might be employed in more than one factory on the same day. The rules

framed by these Local Governments invested the Inspector of Factories with the power to sanction such employment if he were satisfied that the adults concerned were not employed for more than 10 hours on any one day and that they received the weekly holiday prescribed by Section 22 of the Act. In addition to the notice of 48 hours of work for particular periods, every factory was required to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their hours of work and the nature of their respective employment.

Amendment of the Factories Act, following the Recommendations of the Royal Commission on Indian Labour.—The Royal Commission made several very important recommendations for substantial amendments of the Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours; secondly, for the improvement of working conditions in factories; and thirdly, for a more effective observance, on the part of the factory owners, of the requirements of the Act. The Government of India, in the Department of Industries and Labour, issued a circular letter, dated the 10th June 1932, addressed to all Local Governments and Administrations forwarding a draft Bill intended to consolidate the present law regarding the regulation of power using factories and incorporating the majority of the Commissioners' recommendations. All Provincial Governments were asked to submit replies to this letter by the 1st December 1932. On receipt of the Local Government's replies, the Honourable Member in charge of the Department of Industries and Labour of the Government of India made a tour of the more important industrial centres in India to discuss various questions arising out of the draft Bill with the representatives of Local Governments and associations of employers and workmen. On the conclusion of this tour, the Government of India convened a conference of Provincial Chief Inspectors of Factories and a final Bill was then drawn up which was introduced in the Legislative Assembly on the 8th September 1933. It was passed into law at the Summer Session of the Legislative Assembly at Simla in 1934 and received the assent of the Governor-General on the 20th August of that year. The new Act was brought into effect from 1st January 1935.

The Royal Commission also made several suggestions with regard to the control of factories not using power nearly all of which are at present unregulated. The Government of India propose a new and separate Act in respect of such factories and they are at present engaged in drafting a Bill covering the Commissioners' recommendations in the matter.

The following are the more important additional matters covered by the Consolidating Act —

(a) A distinction is drawn between seasonal and perennial factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication of

groundnuts, or the manufacture of groundnut oil, or the manufacture of coffee, indigo, lac, rubber, sugar (including *gur*) or tea is to be a seasonal factory, provided that the Local Government may, by notification in the local official Gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The Local Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

(b) Factory operatives were formerly divided into two age groups (1) Adults and (2) Children, i.e., persons over 12 and under 15 years of age. The Consolidating Act introduces a third age group of "Adolescents" i.e., persons over the age of 15 years and under the age of seventeen years who have not been certified as fit for adult employment. Such "Adolescents" as have not been so certified are to be deemed to be children.

(c) The existing maximum limits of eleven hours per day and sixty hours per week continue to be permitted in the case of seasonal factories but the maximum hours of work permitted in the case of workers in perennial factories has been reduced to ten hours per day and 54 hours per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted in the case of children is five hours per day both in seasonal and in perennial factories.

(d) The New Act introduces for the first time the principle of "spreadover," i.e., the limitation of the period of the number of consecutive hours during which the daily limits of hours of work may be availed of by the owner or an occupier of a factory. The spread-over in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half consecutive hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults must include the hours between 7 p.m. and 6 a.m. in the case of women. The continuous period of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. Exemptions in the case of women are permitted in such cases as technical reasons require that work should be done at night, e.g., in the fish curing industry.

(e) The existing provisions with regard to the control of artificial humidification are expanded. The Act also gives power to Local Governments to authorise an Inspector to call upon Managers of factories to carry out specific measures for increasing the cooling power of the air where he is of the

opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort, provided that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) With regard to welfare, the Act includes provisions for the maintenance of (1) a sufficient and suitable supply of water for washing for the use of persons employed in processes involving contact with poisonous or obnoxious substances, (2) adequate shelters for rest in factories employing more than 150 persons, (3) rooms reserved for the use of children of women employed in factories employing more than 50 women and (4) first aid appliances. Powers are to be given to Local Governments to frame rules in respect of the last three matters. The Government of India, however, did not accept the recommendation of the Royal Commission with regard to giving power to Local Governments to issue welfare orders as are issued by the Secretary of State in England under Section 7 of the Police, Factories, etc. (Miscellaneous Provisions) Act, 1914. They were of opinion that the matters to be covered by such welfare orders should have the approval of the Legislature and should not be imposed on factory owners by the Executive Government.

(g) The Act gives Local Governments powers to make rules prescribing the fitness to be attained by children seeking employment in factories or in any class of factories, and when such a standard has been prescribed no child failing to attain it can be certified as fit for employment in a factory.

(h) Inspectors are granted power to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories. If they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety, and Local Governments are empowered to make rules for the furnishing, by factories, of certificates of stability.

(i) The maximum amount of overtime that can be worked by virtue of any exemptions granted under the Act is limited and a time and a half is to be paid

in all cases where a worker in a seasonal factory works for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory works for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory works for more than fifty-four hours in any week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. Where a worker in a factory works on the weekly rest day he is to be entitled, in respect of the overtime worked to pay at the rate of one-and-a-half times the ordinary rate of pay.

(j) No exemptions are to be granted in respect of the provisions for spreadover, prohibition of night work between 7 p.m. and 6 a.m. and of the weekly limits of hours of work for women and persons under the age of sixteen years, but the grant of the existing exemption in the case of women employed in fish curing and fish-cauning factories is to be permitted.

(k) Sections 26, 35 and 36 of the Old Act are entirely recast in order to provide more effective methods for the maintenance of records and registers of employment, the posting of notices, for the benefit of the workers, of their hours of employment, the prescribed abstracts of the Factories Act, weekly holidays, etc., and for the notification of these notices and any changes proposed to be made in them to Inspectors of factories.

(l) Higher penalties and fines are prescribed for occupiers or owners of factories who have been previously convicted for having committed the same offences.

At the moment of writing it is too early to offer any comments on the working of the New Act. Outside, the textile industry, factory workers are not likely to be much affected because in most cases, weekly hours of work were 54 or under. In textile mills, some owners have reduced the daily hours whereas others have taken advantage of the imposition of a shorter working week, to give a half holiday on the day preceding the weekly rest day. The effects of the reduction in hours on wage rates will be dealt with under "Wages."

LATEST FACTORY STATISTICS.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1933. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 1,847 perennial and 3,016 seasonal factories, above 48 and not above 54 in 669 perennial and 329 seasonal factories, and not above 48 hours per week in 1,369 perennial and 1,069 seasonal factories. In the case of those factories employing women 3,186 required female workers to work for more than 54 hours per week whereas 1,870 fixed their hours at below 48 per week. 631 factories had hours above 48 but not above 54. Out of the 919

factories employing children, 367 had hour below 30 for children and 552 above 30. The details in connection with the various provinces will be found in summary form in the All-India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway workshops in all provinces generally average 8 per day and 48 per week. In most cases the hours are so arranged as to provide for a half day off on Saturday provided that a total of 48 hours is worked during any particular week.

Employment of Children—By the Amending Act of 1922 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. The Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further, no child is allowed to be employed in any factory before six o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than five hours in any one day. The number of children employed in factories during the years 1922 to 1933 is shown in the following table—

Year	Total
1922	67,658
1923	74,620
1924	72,531
1925	68,725
1926	60,091
1927	57,562
1928	50,911
1929	46,843
1930	37,972
1931	26,932
1932	21,733
1933	19,091

An examination of the figures in the above table will show that the number of children employed rose from 67,658 to 74,620 in 1923. This was due to the fact that the tea factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year. Further, the amendment of the Act in 1922 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new age restrictions for children.

There has been a steady decline in the number of children employed. In the textile mills in Bombay City there are none.

Employment of Women—The number of women employed in factories during the years 1921 to 1929 increased steadily from 206,887 employed in 1922 to 257,161 employed in 1929. But the number of women employed since 1929 has fallen perceptibly, the figures for 1930, 1931 and 1933 being 231,905, 231,183 and 216,837 respectively. The increase in the employment of women was due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi-agricultural factories, for example, in the tea gardens which are dependent on female labour to a larger extent than other factories. An important change which the revision of 1922 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in ginning factories. In view of this amendment the Government of India considered that they were in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation.

LABOUR IN MINES.

The conditions of employment of labour in mines are governed by the provisions of the Indian Mines Act, 1923, which came into force with effect from the 1st July 1924 replacing the former enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff, but it contained no provisions regulating the employment of labour.

Section 23 of the Indian Mines Act of 1923 limited weekly hours of miners to 54 underground and to 60 aboveground but no limits were prescribed for daily hours. In a Bill further to amend the Act for certain purposes introduced by the Government of India in the Legislative Assembly in March 1927 it was proposed to fix the maximum limit for daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight-hour day and this was also the opinion of a minority of the Select Committee appointed by the Assembly to consider the Bill. The majority of the Committee however adhered to the principle of a twelve-hour shift as proposed in the Bill but agreed that an eight-hour shift should be

gradually worked upto. They recommended to Government that after the new provisions had been in operation for three years, the position should be again reviewed as to whether an eight-hour shift could be introduced. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 and this was to be brought into effect from April 1930.

Recommendations of the Royal Commission.

The Royal Commission on Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated the reduction of the daily limit to eight hours while the majority supported the recommendation of the majority of the Select Committee, and in addition suggested that weekly hours above ground should be limited to 54. In the meanwhile, the fifteenth session of the International Labour Conference adopted a Draft Convention concerning hours of work in coal mines, framed solely with reference to conditions in European countries. This Convention prescribes that the hours of work should be limited to 7½ per day in

underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The Convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 2nd March 1932 and resolutions were adopted by both the Chambers to the effect that Government should examine the possibility of reducing the statutory limits for hours of work in mines and that the results of this examination should be placed before them.

In pursuance of this Resolution the whole question was re-examined by the Government of India in 1932 and they addressed a circular letter in that year to all local Governments inviting their views on questions connected with reductions of hours, non-employment of children in Mines, etc. In the light of the opinions received, the Government of India drew up a Bill further to amend the Indian Mines Act 1923 and this Bill was introduced in the Legislative Assembly on the 22nd January 1933. The following are the more important provisions of the Bill—

(a) Local Government are to be empowered, by notification to direct that accidents which cause bodily injury resulting in the enforced absence from work for a period exceeding seven days shall be entered in a register in the prescribed form,

(b) No person shall be employed in a Mine more than six days in any one week,

(c) No person employed above ground in a Mine shall be allowed to work for more than

fifty four hours in any one week or for more than ten hours in any one day, and the periods of work of any such person shall be so arranged that along with any intervals of rest they shall not in any one day spread over more than eleven hours,

(d) The periods of work of a person employed below ground in a Mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to be spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work, and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface,

(e) Work above ground is not to be carried on in any Mine for a period exceeding eleven hours in any one day except by a system of relays so arranged that not more than any one relay of persons, employed in work of the same kind shall be at work in the Mine at the same time,

(f) The employment in any Mine of children under fifteen years of age is to be prohibited.

Number of Mines—The following table gives the number of mines which came under the Act during each of the last ten years, classified according to the minerals raised:—

Year.	Number of mines					Total Number of all mines.
	Coal.	Mica.	Manganese	Tin and Wolfram	Other minerals	
1924	846	513	186	87	172	1,804
1925	810	571	214	204	212	2,011
1926	722	601	221	210	143	1,897
1927	644	630	220	200	298	1,992
1928	556	674	184	203	331	1,948
1929	548	498	125	186	375	1,732
1930	549	508	82	178	352	1,669
1931	540	342	56	136	343	1,417
1932	515	315	23	138	290	1,281
1933	501	377	17	190	330	1,424

Number employed—The number of persons employed in mines during the years 1924-1933 were as follows:—

Year.	Total No. of mines which came under the Act.	Number of persons employed.		
		Belowground.	Aboveground.	Total.
1924	1,804	167,779	90,498	258,277
1925	2,011	168,554	84,303	253,857
1926	1,897	189,371	70,742	260,113
1927	1,992	196,341	72,949	269,290
1928	1,948	197,398	70,273	267,671
1929	1,732	199,908	69,783	269,701
1930	1,669	191,915	69,752	261,667
1931	1,417	170,638	60,144	230,782
1932	1,281	151,024	52,734	204,658
1933	1,424	153,942	52,565	206,507

The sex distribution of the persons employed in mines during the years 1926 to 1933 was as shown below :—

Year	Number of males employed.			Number of females employed.		
	Underground	In open workings	On the surface	Underground	In open workings.	On the surface.
1926	86,343	43,306	51,967	31,889	27,833	18,776
1927	86,786	50,028	53,903	31,850	27,697	19,046
1928	86,155	51,005	52,430	31,785	28,453	17,848
1929	92,856	54,235	51,954	24,089	28,728	17,839
1930	101,649	50,396	52,709	18,684	21,186	17,043
1931	98,885	38,833	45,157	16,841	16,079	14,987
1932	96,196	30,256	39,899	14,711	16,761	12,835
1933	99,556	30,866	40,616	12,799	10,721	11,949

LABOUR ON RAILWAYS.

All railway workshops come under the administration of the Factories Act. The Indian railways employ nearly a quarter of a million workers in other occupations for whom provision for the control of their working hours has been made under the Hours of Employment Rules, 1930, framed under the Indian Railways Amendment Act, 1929.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 48-hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories, in mines and in such branches of railway work as may be specified for this purpose by the competent authority. The Indian Factories Act which was amended in 1922 to give effect to the Conventions limited the hours of work in factories to 11 in any one day and to 48 in any one week. Provisions were also made for intervals of rest and a weekly holiday. Similar limitations were imposed under the Indian Mines Act of 1923 in respect of colliery staff. Under the amending consolidated Factory Act of 1931 weekly hours in perennial factories have been reduced to 54 and as will have been seen in the last chapter. Similar reductions are proposed in the case of hours in Mines. Both these restrictions apply to factories and mines controlled by railway administrations. The application of the Conventions to other departments of railway administrations was found to be a problem beset with many difficulties and has been a subject of prolonged investigations. Orders were issued by the Railway Board in 1921 that the 48-hour week should be adopted for station staff not employed in connection with the working of trains. The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aimed at applying the spirit of the Conventions did not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole question was therefore again exhaustively reviewed and a Bill amending the Indian Railways Act with the object of empowering the Governor-General in Council to make rules on

the subject was introduced in the Legislative Assembly in the autumn session of 1929 and was referred for consideration to a Select Committee. The Amending Act was passed in the same year and the Hours of Employment Rules were drawn up during the following year.

The Royal Commission on Indian Labour made some very important recommendations regarding hours of work and rest day for railway workers other than those employed in factories and mines. As far as the recommendation that the weekly rest day of not less than 24 hours provided under the Act of 1930 should be granted subject to the usual emergency exceptions to all continuous workers is concerned this has been accepted by the Government of India for gradual introduction on all railway systems as financial considerations permit. The Government of India have also accepted the recommendation made by the Commission that special efforts should be made to put into operation as soon as possible the regulations devised to give effect to the Washington and Geneva Conventions re Hours of work in the case of railway employees. They have also accepted the recommendation that the Railway Board should reconsider the practicability of reducing the hours for intermittent workers and of giving days of absence at reasonable intervals where weekly rest days cannot be given. The Railway Board however consider that the first step that should be taken, as soon as funds permit is to extend the application of the Regulations to the Railways to which they have not yet been applied, and that, the question of reducing the hours of work, generally, for intermittent workers will be considered comprehensively will be considered thereafter. In the meanwhile all Agents of Railways have been instructed to reduce the hours of work and provide suitable periods of rest in individual cases where humanitarian considerations require such a course.

Working of overtime on Indian railways is more prevalent on construction than on the open line due to (1) the working season in the monsoon areas being confined to eight months in the year, (2) special measures taken to speed up all heavy work to avoid the locking up of capital; and (3) wet foundation work in bridges which necessitate continuous work. Usually overtime in such cases is paid at a rate fixed beforehand,

SEAMEN.

The Indian Merchant Shipping Act, 1923, provides that no seaman shall be "signed on" for service on a ship unless he enters into a contract in the manner specified with the Master of the ship. All agreements entered into between Masters and Seamen for service on

foreign-going ships have to be signed in the presence of a Shipping Master. The agreement forms contain the rules and regulations provided for under the Act for maintaining discipline and for the fines which may be inflicted for the breach thereof.

CONTRACT LABOUR.

In most industrial concerns in India work in connection with building, loading and unloading, carting, receiving, and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile cotton industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Mixing and Waste Room and the Yarn Bundling and Baling Department, in the Drawing-in Department and Beam Carrying is given out on contract in various mills. In certain printing presses in the Bombay Presidency, composing is given out on contract. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways. This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows:

In the coal mines in Bihar and Orissa contractors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases, however, the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Jharia coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent. of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by contract labour. In some cases contractors are only employed to provide the labour for cutting the coal. The contractor is generally responsible only for raising the coal while the colliery supervising staff is responsible for seeing that the mines are run safely.

UNEMPLOYMENT.

The problems connected with unemployment in India are quite different from the problems which have arisen in highly industrialised countries like England, the United States of America and Germany. In the latter countries labour is divided into two fairly distinct classes (1) industrial, and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of concerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent. of the population of India derive their livelihood from various occupations in connection with agriculture. This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon fails. Even during those years when the monsoon is generally successful, there are usually parts of the country where the rainfall is deficient and there is not enough scope for the employment of all the labour available. Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not neces-

sary to go into the details of the questions connected with famine relief in this section. The point which it is intended to bring out is that owing to the agricultural character of industrial labour in India, the problems connected with employment and unemployment are somewhat closely related to those connected with the success or the failure of the monsoon.

Speaking generally, the Indian labourer migrates to industrial centres when he finds that the yield of the land in his native place is not sufficient to maintain all the members of his family. A certain percentage of the workers employed in industry temporarily give up their employment during the sowing, transplanting and harvesting seasons. During periods of depression in trade and industry, industrial workers released from employment fall back upon agriculture and thus add to the existing pressure of the population on the land. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour, to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of

creating Employment Exchanges in India several times during the last ten years, but opinion is unanimous that owing to the preponderantly agricultural character of Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges. A vital difficulty for the adequate consideration of this problem has always been the want of satisfactory statistics to gauge the level of unemployment at any one period. Continuous migration between industry and agriculture makes the task of collecting such statistics well nigh impossible. Desultory attempts at measuring unemployment in particular industries in limited territories have, however, been sometimes made. One of the most recent attempts in this direction has been an enquiry into the extent of unemployment in the textile industry in the Bombay Presidency and the Central Provinces conducted as a part of the Departmental Enquiries held by the Labour Office and the Department of Industries in 1934 at the request of the Government of Bombay and the Central Provinces on the general subject of wage reductions in that industry. It was found that the total number of hands displaced in cotton mills in the Bombay Presidency on account of closures of mills amounted to about 38,000. In the Central Provinces about 2000 workers had lost their jobs between 1932 and 1934.

India is a State Member of the International Labour Conference, and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt, whenever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

(i) to communicate to the International Labour Office all information, statistical or otherwise, concerning unemployment, including reports on measures taken or contemplated to combat unemployment,

(ii) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees, including representatives of employers and workers, to advise on matters concerning the operation of these agencies,

(iii) where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter.

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

(a) the abolition of employment agencies, which charge fees or which carry on their business for profit,

(b) the establishment of an effective system of unemployment insurance, and

(c) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it.

The draft Convention was ratified by India but, in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary "in order to avoid subsequent misunderstanding" to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India, in addressing the local Governments on questions arising out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points—

(i) Advisability of creating Public Employment Agencies in congested areas to facilitate the migration of surplus labour to industrial areas where there is a shortage of labour.

(ii) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam.

(iii) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment.

(iv) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies.

(v) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit.

The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand, that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to recruitment of labour for Assam, the local Governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment.

Although it has not been possible for the Government of India to take any action in the matter of unemployment either by legislation or administrative action, a few local Governments have devised schemes intended to reduce unemployment. The Government of Bengal started an unemployment relief scheme some three years for the financing of which a lakh of rupees per annum was sanctioned. The scheme contemplated the entertainment of two

Industrial Surveyors and the establishment of four demonstration parties in each of seven selected industries: jute and wool weaving, umbrella making, Cutlery, brass and bell-metal, soap making, shoe making and pottery. The scheme was to take up, in the first instance, the training of peripatetic demonstration parties, and, in order to secure non-official co-operation which was essential not only for getting recruits of the right type but also for creating an industrial atmosphere in a province, pre-eminently agricultural. The formation of a non-official association in each District to be known as Industrial Association was encouraged and the local district boards were called upon to assist. As there were only 28 demonstration parties work under the scheme could not be started in more than fourteen districts at a time, up to the end of 1933 four parties for each of the seven industries except jute and wool were working in different parts of the Province, those of the students trained by these parties have started factories of their own and in wild h considerable numbers of people have found employment.

Middle-class unemployment.—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention. In January 1926, a Resolution was passed by the Legislative Assembly in the following terms :—

“ This Assembly recommends to the Governor-General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment, or by the establishment of employment bureaux, or by all these or any other means, and that the said Committee do make a report on the latter problem as early as possible.”

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment in India. As a result of the Resolutions passed by the local Councils, Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle-class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that “ there was no unemployment worthy of mention among the uneducated classes ” ; whilst the Bengal Committee observed as follows :—

“ The labourer, if we may use the term, has not yet been divorced completely from the land, and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in times of depression. Added to this is the fact that industrial labour is still comparatively scarce in Bengal and in fact had to be imported

from other provinces. The effect therefore of trade depressions on the industrial labourer in Bengal is so far very small.”

The Assam Legislative Council passed a resolution on the 13th September 1933 recommending to the Government of Assam the appointment of a Committee to consider the problem of unemployment, specially among the educated middle class people of the Province. In the general discussion in connection with this resolution it was pointed out that extension of technical education, industrial development and concentration on agriculture to a large extent are the only means of dealing the problem in the conditions prevailing in Assam. On behalf of the government it was stated that this subject was discussed at a conference, recently held under the auspices of the Government of India, of representatives of departments of industry in all the provinces of British India and some of the Indian States, when the desirability of establishing a central industrial research for considering the question of industrialisation was emphasized. It was further stated that the Government proposed to establish agricultural colonies of educated young men, as an experimental measure, to make provision for helping technical institutions, to advance industrial loans to enable young men with the necessary training to set up small industries and to restrict, as far as possible, employment under Government to natives of the province. The Council was, however, informed that any action concerning this situation must have some reference to unemployment among the poorer classes as well.

Jute and Cotton Mill Industries.—In the jute mill industry in Bengal a large number of mills have, during the last two or three years, changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported with regard to unemployment. In the Bombay cotton mill industry, out of an average of about 140,000 workers employed during the years 1920 to 1927 approximately 20,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two or three sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three, four or six looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the findings of this Committee in the Section on Conciliation and Arbitration. Owing to depression in trade and external competition several cotton mills had compelled either to close down completely or to work with partial complements but the revival of trade which set in about the middle of 1934 resulted in several of the closed mills re-opening and work on high shift being started in several other Mills. By the end of the year the total numbers of workpeople employed in the cotton mill industry in Bombay rose to 1,35,000 and about 15,000 additional workers were able to secure work satisfactory periods as *badlis* or substitutes.

INDUSTRIAL SAFETY AND INSPECTION.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. Statistics for 1933.—The numbers of accidents classified according to fatal, serious and minor in factories in each of the British Provinces in India in the year 1933 are shown in the following table:—

Province.	Fatal.	Serious	Minor.	Total.
Madras	15	366	1,179	1,560
Bombay	38	1,129	1,050	5,125
Bengal	49	884	2,697	3,630
United Provinces ..	32	374	1,574	1,979
Punjab	10	53	886	949
Burma	19	233	1,245	1,497
Bihar and Orissa	23	391	1,507	1,981
Central Provinces and Berar	5	54	221	280
Assam	2	71	365	438
North-West Frontier Province				
Baluchistan	1		46	47
Ajmer-Merwara		17	735	752
Delhi		5	91	96
Bangalore and Coorg			72	72
Total	194	3,776	14,730	18,700
Total for the year 1932	162	3,513	14,452	18,127

The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for work-people and employers to report accidents more frequently than in the past. But the increase in the number of serious accidents suggests that the problem is a serious one and that an organised "safety first" campaign is very desirable in India. Some progress along these lines has been made in Bombay in the mills and on the railways.

Factory Inspection.—The administration of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where breaches of the Act are discovered the managers of factories are prosecuted and in most cases such prosecutions result in convictions. All provinces except Assam have Factories Departments. In the Bombay Presidency the full time factory staff consists of the Chief Inspector of Factories, three Inspectors, three Assistant Inspectors and one Woman Inspector. The Chief Inspector, two Inspectors and two Assistants have their headquarters in Bombay City. An Inspector and an Assistant are stationed in Ahmedabad. The Woman Inspector has her headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women. The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. A part time Certifying Surgeon is stationed in Bombay and a full time one in Ahmedabad. They have been appointed as Divisional Inspectors with powers under the Health and Sanitary sections of the Factories Act. They have also been granted powers under the provisions of the Bombay Maternity Benefit Act.

The Director and Assistant Directors of Public Health have also been appointed as Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who passes orders on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Reporting of Accidents.—The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious *i.e.*, accidents which prevent a person returning to work for 21 days or more, and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma.

Accident Prevention—The chief influences in the prevention of accidents are (a) the powers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents, (b) the voluntary interest of managers in safety measures and safety precautions, and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover "Safety-First" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering into certain parts of factories, etc. Steady progress has been made in the different provinces in respect of "safety first" propaganda, but with wide differences in caste and religion and with the low standard of efficiency the problem of organisation of safety services in industrial undertakings is a matter of some difficulty in India. Particular attention was devoted in Bengal to the safeguarding of crowded machinery in the smaller factories and orders were issued during the year 1932 in that province to 62 factories to alter, repair or reconstruct their buildings. Special attention was also directed during the year 1933 to the dangers connected with hydraulic rammers used in laundries and hoist factories and to the structural soundness of factory buildings. Safety pamphlets were compiled and issued by the Factory Department in Bengal and Madras. Continued progress in the fencing of machinery and in the use of safety posters is reported to have been maintained in all provinces and increasing attention is being paid by employers throughout India to safety measures and to the inoculation in the factory employee of "Safety first" ideas. In Bombay a certain amount of ground had already been broken and the Factory Department in co-operation with organisations of industrial employers produced a set of four "safety posters" some years ago and these have been very largely exhibited in the engineering workshops in the Presidency. Posters were also produced for the carding and spinning departments of cotton mills. The Red Cross Society was assisted in producing an All-India poster dealing with a universal risk connected with the wearing of loose-clothing which is ordinarily worn by the average Indian worker. Encouraged by the results of the posters introduced in Carding and Spinning sheds the Millowners' Mutual Insurance Association, Bombay, produced a set of posters for the weaving department early in 1931 and these are now in fairly general use. Little has, however, been done in the factories of the Bombay Presidency in the way of specific organisations to further the cause of safety. Factories, too, are not sufficiently large to warrant the employment of a safety engineer and reliance has almost totally been placed on the activities of the Inspectorate in this particular direction. Safety Committees have, however, been established in two cotton mills representative of the two largest groups in Bombay, as an experimental measure and in the R. M. Dockyard, the G. I. P. Railway Workshop and in the Bombay Electric Supply and Tramways repair shops in Bombay. Safety Committees have been brought into existence in more than 20 mills in Ahmedabad and the Factory Department has

secured promises from other factories to establish similar committees.

Mr A. Trollip, Deputy General Manager of the Bombay Electric Supply and Tramways Co., Ltd., started a Safety First Association in Bombay in 1933 and he is President of this Association. The Association holds frequent meetings at which subjects relating to safety first are discussed and it also publishes a safety first Magazine periodically. The office of the Association is at Esplanade Road, Bombay.

The railways are of course pioneers in the introduction and the continuance of active propaganda in "Safety-First" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. There has been marked improvement as regards minimising accidents in railway workshops as a result of the activities of safety committees which have been established in some of them. The success of safety committees which has been established at the 8.1 Railway workshops at Perambur and Golden Rock has been demonstrated by the fact that at the latter works accidents decreased by 53 per cent in 1932 as compared with 1931. A very comprehensive Safety First Organisation was established in the Patel, Matunga and Mambard Workshops of the G. I. P. Railway in 1929. The Railway administration also distributes to the employees an illustrated pamphlet on "Safety First" in which a chapter on workshop safety is included. The G. I. P. Organisation is stated to be the best of its kind. Safety Committees have also been formed in the E. I. M. Dockyard and the Bombay Electric Supply and Tramways Company. In the United Provinces no industrial undertaking has yet introduced a safety service organisation. The Welfare Committees of the E. I. Railway Locomotive and Carriage Workshops, Lucknow, do at times discuss at their monthly meetings questions of safety brought forward by members. Safety posters, published by the Railway Administration, are displayed in all their workshops and the Indian Red Cross Society posters in all factories in the province. In furtherance of the "safety first" movement in Bengal warning booters or screens have been installed in the textile factories so as to warn employees before the power plant and machinery is set in motion. An instructive handbook entitled "Safety in Factories" dealing with general matters concerning the safety of factory operatives has been compiled and published. An agreement in regard to standard guards and safety devices for jute machinery has been signed by the Indian Jute Mills Association in regard to new machinery to be installed after July 1932. Posters supplied by the Indian Red Cross Society illustrating the suitable type of dress to be worn by operatives while working on transmission machinery were distributed to factories in the different provinces, and safety propaganda of various kinds is receiving increasing attention from the large factory owners and the inspecting staff. Perhaps the best known instance where first class "safety first" work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur. The Company has since 1920 subscribed to the British Industrial Safety First Association

and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association is periodically broadcast throughout the world.

The Railway Department conducts an intensive "Safety-First" propaganda every year which embraces the following among other activities —

- (1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular. Some of these, e.g., on the Bombay, Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.
- (2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.
- (3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.
- (4) Inspecting subordinates are instructed to take the opportunity, while visiting stations, of addressing the staff on "Safety-First".
- (5) Coloured pictures showing the right and wrong way of doing a job are posted at various places for the benefit of the illiterate staff.
- (6) A "Safety-First" film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is displayed weekly by the travelling cinemas of the railways.
- (7) A "Safety-First" pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

First-Aid and Medical Relief—Some of the Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by Local Authorities but many of the larger and enlightened employers are already maintaining their own medical staff and equipment which

are easily available in cases of accidents. The Millowners' Association, Bombay, started classes for First Aid training in conjunction with the St. John Ambulance Association in 1931. These classes have been successful and facilities have since been provided for the training of men deputed by the Engineering Safety Committee also. In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons. During 1934 the Assistant Commissioners of Labour of the Government of Bombay who visited about 750 premmal factories in all parts of the Bombay Presidency Proper requested all managements to instal first aid boxes in all departments as far as possible.

Mines—The Indian Mines Act of 1923 empowers the Governor-General in Council to frame regulations for the safety of persons employed in mines (Section 29, clauses (k) to (p)). Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition, the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the Local Government, have effect as enacted under the Act. Further, Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye-laws. The Governor-General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metalliferous Mines Regulations, 1926, which apply to all other mines. These regulations provide for the proper maintenance of shafts and outlets, roads and working places, haulage arrangements, fencing and gates, for the restrictions which have to be observed in raising or lowering persons or materials, for the precautions to be taken in the use of explosives, and for adequate ventilation and lighting.

During the year 1933 at Mines regulated by the Indian Mines Act, 1923, there were 112 fatal accidents, which is 21 less than in 1932, and 58 less than the average number in the preceding five years. In addition to the fatal accidents there were 655 serious accidents involving injuries to 670 persons, as compared with 600 serious accidents involving injuries to 613 persons in the previous year. No record is maintained of minor accidents. 153 persons were killed and 702 persons were seriously injured. The latter figure includes 32 persons injured in fatal accidents. The number of persons killed is 47 less than in 1932. 130 of the persons killed were men and 23 were women. In four cases, three lives, and in two cases two lives were lost. The

causes of the fatal accidents have been classified as follows.—

	Number of fatal accidents.	Percentage of total number of fatal accidents.
Misadventure	100	70 42
Fault of deceased ..	12	8 45
Fault of fellow workmen ..	6	4 23
Fault of subordinate officials ..	13	9 15
Fault of Management ..	7	4 93
Faulty Material ..	4	2 82
Total ..	142	100 00

Deaths occurring in each class of mines were as follows—124 in coal mines, 3 in mica mines, 4 in silver-lead mines, 10 in tin and wolfram mines, 6 in limestone mines, 4 in stone mines and 2 in copper mines. Forty persons lost their lives by falls of roof, 44 by falls of side, 25 by haulage, 19 on account of suffocation by gases, 10 by explosives, 6 by explosives and ignitions of fire damp, 3 in shafts, 10 by other accidents underground and 15 on the surface.

WORKMEN'S COMPENSATION.

The Workmen's Compensation Act of 1923 which was the first piece of social insurance passed in this country, came into force on July 1st, 1924. The Act covered ten classes of workmen. Some of these, such as members of fire brigades, telegraph and telephone linemen, sewage workers and tramwaymen are small, and as the definition of seamen was limited to those employed on certain inland vessels, only a very small proportion of Indian seamen came under the Act. Compensation for seamen, however, has been secured by agreement between the Government of India and foreign steamship companies, under which the latter agree to the insertion in the ships' articles of a clause whereby the companies agree to pay compensation to injured Indian seamen on the same basis as if they were covered by the Act and all questions as to compensation are decided by Commissioners of Workmen's Compensation in India. An Indian seaman employed on a British ship legally comes under the English Act and the insertion of the clause referred to above does away with the practical difficulties which would arise if Indian seamen had to claim compensation in the English or other foreign courts. The five main classes of workmen covered by the Act are workers in factories, mines, docks and on railways, practically all of whom are included and those engaged in certain types of building work, notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs. 300 a month are excluded, except on the railways. Power was taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus declared by the Governor-General in Council as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will

usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for disease, as they will have to prove that the disease arose "solely and directly" from employment. The diseases scheduled were anthrax, lead poisoning and phosphorous poisoning, but the list was made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1926.

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for Occupational Diseases adopted at the Seventh International Labour Conference held at Geneva in 1925, which had been ratified by India, necessary changes were made in sub-section (2) of section 3 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connection with operations for winning natural petroleum or natural gas and in connection with the loading, unloading and fuelling of a ship in a harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor-General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

The Amending Acts of 1929 and 1931.—The main features of the Amending Act of 1929 were (1) the discriminating restrictions placed on workmen employed in the construction, repair or demolition of a building or bridge with regard to their ineligibility or compensation except in the case of death or permanent total disablement was removed, (2) all payments to dependants of the deceased workmen (except advances to the extent of Rs. 50 for funeral expenses of the deceased workman and to the extent of a hundred rupees on account of compensation to any dependent) and any lump sums payable to minors are to be paid through the Commissioner; (3) deposits of trivial amounts, i.e., less than Rs. 10 have been done away with (4) provision was made for the protection of lump

sums payable to a woman or a person under legal disability by empowering the Commissioner to invest, apply or otherwise deal with them for the benefit of the woman, or of such person during his disability, (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means and (6) the benefits of the Act were extended to (a) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing, cleaning or painting any ship of which he is not the master or a member of the crew, or (b) employed on a railway as defined in Sections 3 (4) and 148 (1) of the Indian Railways Act, 1890, by a person fulfilling a contract with a railway administration, or (c) employed as an inspector, mail guard, sorter or van peon in the Railway Mail Service, or (d) employed in connexion with operations for winning natural petroleum or natural gas, as a rig-builder, driller, driller's helper, oil-well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil wells or (e) employed in any occupation involving blasting operations.

In 1931 the Act was further extended to cover workmen engaged in the construction, etc., of aerial ropeways.

The Amending Act of 1933—The Royal Commission on Indian Labour made a number of recommendations for expanding the scope of the Workmen's Compensation Act, 1923, and on effecting improvements in it. The Government of India, in the Department of Industries and Labour, introduced a Bill in the Legislative Assembly on the 22nd February 1932 giving effect to the Commission's recommendations and it was passed in 1933. It came into force on 1st July 1933 but certain sections of the Amending Act were brought into operation from 1st January 1934 in order to give time to the industries covered for making the necessary insurance arrangements in view of the alterations made in the amounts of compensation payable. The principal amendments made in the Act are as follows—

(a) The definition of "dependant" has been recast so as to divide dependents into two categories, placing in the first those who are in practically all cases actually dependent and in the second those who may or may not be in that position. Widowed daughters, widowed sisters and widowed daughters-in-law as well as illegitimate children have been included in the list of dependents.

(b) The scope of the Act has been extended so as to cover as completely as possible all workmen in organised industries whether their occupations are hazardous or not and a step has been taken in the direction of extending the benefits of the Acts to workers in less organised industries when employment is subject to much risk. The distinction which existed between seamen employed in the ships registered in India and those in ships registered in foreign countries has been removed. Any person employed as the master or a seaman of any ship which is propelled by mechanical power or towed by a ship so propelled as well as in any other kind of ship whose net tonnage is 50 tons or more are

brought within the scope of the Act. Not only workmen employed within the precincts of a factory but also men engaged in any kind of work incidental to or connected with work in a factory are entitled to the benefit of the Act. Other classes of workers included within the scope of the Act are drivers of private motor cars, workers employed in handling explosives or in the construction of any building twenty feet or more in height or in the construction, working, repair or demolition of any aerial ropeway or in any occupation ordinarily involving outdoor work in the Indian Posts and Telegraphs Department, or in the operation of any ferry boat capable of carrying more than ten persons or in any estate which is maintained for the purpose of growing cinchona, coffee, rubber or tea, or in a lighthouse as defined in clause (d) of section 2 of the Indian Lighthouse Act, 1927, or in producing or exhibiting cinematograph pictures, or in the training, keeping or working of elephants or wild animals or employed as a diver.

(c) The waiting period has been reduced from ten to seven days.

(d) The scales of compensation for death and permanent total disablement which are graded according to seventeen wage classes, have been considerably enhanced and the minimum rate introduced represents an increase of over 100 per cent. on that given under the original Act, while the maximum is increased by 60 per cent. The basis of calculation of the amount of compensation in the case of death or permanent total disablement is the same as before, i.e., 30 months' wages for the former and 42 months' wages for the latter for adults. The maximum amounts of compensation for death and permanent total disablement have been increased from Rs. 2,500 and Rs. 3,500 to Rs. 4,000 and Rs. 5,600 respectively. In the case of minors there is no change in the amount of compensation for death but the maximum compensation for permanent total disablement has been prescribed at a uniform rate of Rs. 1,200 as against 84 months' wages or Rs. 3,500 whichever is less in the original Act. The maximum limit to the amount of half-monthly payments in the case of temporary disablement to both adults and minors has been raised from Rs. 15 to Rs. 30.

(e) New provisions have been inserted into the Act enabling the interests of dependents in cases of fatal accidents to be better safeguarded by ensuring that (i) in as many cases as possible, fatal accidents are brought to the notice of Commissioners, (ii) where the employer admits liability, compensation is to be deposited promptly, and (iii) where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependents get the information necessary to enable them to judge if they should make a claim or not.

(f) A contractor has the right to be indemnified by his sub-contractor if he has had to pay compensation either to the principal or to the workman.

(g) An employer may make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees, and so much of such aggregate as does not exceed

the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct Rs. 25 from the amount of compensation payable, for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

(b) The following four new industrial diseases have been added to Schedule III of the Act — (1) Mercury poisoning or its sequelae, (2) poisoning by benzene and its homologues, or the sequelae of such poisoning, (3) chrome ulceration or its sequelae, and (4) compressed air illness or its sequelae.

Statistics.—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the original Act came into force. These statistics relate to the more important classes of workers, i.e., workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 64 lakhs of rupees in 1925, 8½ lakhs in 1926, 11 lakhs each in 1927 and 1928, 12½ lakhs in 1929 and 1930, 10½ lakhs in 1931, 8½ lakhs in 1932 and 8 lakhs in 1933. The following table shows the number of cases, classified by nature of injuries, and the amounts of compensation paid in each year since 1924 —

Year.	Number of Cases			Amount of Compensation paid for.		
	Fatal.	Non-Fatal	Total	Fatal Cases	Non-Fatal Cases	All Cases.
1924 *—				Rs	Rs	Rs
Adults	249	3,898	4,147	82,085	66,248	1,48,333
Minors	2	19	21	375	1,516	1,891
1925—						
Adults	583	10,751	11,334	3,45,995	2,95,535	6,41,530
Minors	7	30	37	200	2,391	2,591
1926—						
Adults	631	13,387	14,018	4,25,935	3,94,385	8,20,320
Minors	3	4	48	460	695	1,155
1927—						
Adults	777	14,397	15,174	5,81,400	5,27,984	11,09,384

1933—						
Adults	526	14,015	14,541	3,31,357	4,82,477	8,13,834
Minors	.	18	18	.	115	115

* The figures for 1924 relate to only the six months from 1st July to 31st December.

The following tables set out the proportion of contested cases out of the total number of applications received by the Commissioners in each year —

Year.	No. of Applications disposed of	Number of contested Cases.	Percentage of contested cases to total disposed of
1924	92	14	15.2
1925	539	100	18.6
1926	835	198	23.7
1927	1,223	281	22.9
1928	1,306	309	23.7
1929	1,385	278	20.7
1930	1,438	309	21.48
1931	1,367	296	21.66
1932	1,366	328	24.01
1933	1,242	313	25.20

The details of agreements (i) disposed of, (ii) registered as filed and (iii) rejected on account of inadequacy are given below for each year.—

Year.	Number of Agreements.			
	Disposed of.	Registered as filed.	Registered after modification.	Not registered on account of inadequacy, etc.
1924	41	33	1	7
1925	399	390	3	6
1926	591	583	5	3
1927	701	682	12	7
1928	887	857	25	7
1929	1,046	1,044	14	8
1930	1,007	950	29	28
1931	1,060	1,018	18	24
1932	993	942	22	29
1933	1,033	985	18	30

Effect on Industry—A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was laced. In the Punjab the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in this country and the most important of these are the Claims Bureaux in Calcutta

and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, insurance companies were concerned with half the number of cases that came up before the Commissioner. Insurance Companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the Textile Industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers, one of whose objects is the Mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment. The Association has about 60 members and is controlled by a Board of Directors. In other Provinces accident insurance does not appear to have made much progress.

INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they employ. The importance and the urgency of providing decent housing cannot be sufficiently emphasized.

The conditions of industrial housing in India are, in many cases, appalling and the majority of buildings, tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities, Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees of inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay, other measures should be adopted such as the refusal of permission with a few exceptions, to fresh industrial concerns to be established, the setting up in places of special areas, for industrial development, the removal of the existing railway workshops from cities, supply of housing accommodation to employees by railways, Government departments and public bodies, improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of

other commissions and committees with regard to this question follow similar lines.

Labour Commission's Recommendations.—The Royal Commission on Indian Labour have made several recommendations in connexion with Industrial Housing. These recommendations fall under various categories, (1) Legislative Action by the Central Government, (2) Administrative Action by the Central Government, (3) Legislative Action by Provincial Governments, (4) Administrative Action by Provincial Governments, (5) Administrative Action by public bodies such as Municipalities, Improvement Trusts, etc., and (6) action by Employees' and Workers' organisations. The recommendations under the first head included a suggestion to amend the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers dwellings. The Government of India introduced a Bill in the Legislative Assembly to amend the Land Acquisition Act in the manner suggested and this Bill was passed into law in 1933. The Commission's recommendations under the second head mostly concern Railways, and although the Railway Board agrees on the vital urgency of providing greater facilities for adequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency

The Commission's recommendations with regard to legislative action by Provinces are of a very ambitious character. They include Town Planning Acts for the Bombay and the Bengal Presidencies providing for the acquisition and lay out of suitable areas for working class housing, the opening up and reconstruction of congested and insanitary areas, the "Zoning" of industrial and urban areas and Government grants and loans to approved schemes. For administrative action by Local Governments, the Commission recommend that they should make surveys of urban and industrial areas to ascertain their needs in regard to housing, and that they should then arrange for conferences with all interested parties in order that decisions may be taken as to practicable schemes and the methods whereby their cost should be shared. Where suitable Government land is available, Government should be prepared to sell or lease to those who agree to build houses within a specified period, and Government should announce their willingness to subsidise in this or other ways employees' housing schemes approved by them. The Commission further recommended that Government should insist that all local authorities should frame bye-laws laying down minimum standards in regard to floor and cubic space, ventilation and lighting and that the Governments themselves should draw up regulations for water supplies, drainage schemes and standards for latrines. For action by Public Bodies, the Commission recommend that the provision of working class housing should be a statutory obligation on every Improvement Trust and that it should be possible for Improvement Trusts to provide land, roads, sewers and sanitary conveniences for new areas but that street lighting and water mains should be a charge on Municipalities. Improvement Trusts

should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities. It has also been suggested that co-operative building societies and similar activities should be encouraged. In view, however, of the present acute financial stringency prevailing in all Provinces it is very doubtful whether most of the Provincial Governments will be in a position to do much in the matter of the Commission's recommendations on Industrial Housing.

Bombay Presidency.—The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 "for the work of making new streets, opening out crowded localities, reclaiming lands from the sea to provide room for the expansion of the city and constructing sanitary dwellings for the poor and the police." Owing to its limited powers and the various difficulties which it encountered the Trust had to content itself for the first few years of its existence with "slum-patching," the development of a few building sites, the construction of a few chawls and the development of main roads. In more recent years, however, the Trust has been able to do a considerable amount of good work in the direction of industrial housing and has built over 1,800 tenements for housing its own labour and 99 chawls containing about 9,000 tenements in all for housing labour in general. The Bombay Port Trust which engages on an average about 8,000 manual workers in all its departments has provided accommodation for a little over 3,000 of them. The Bombay Municipality has provided a large number of chawls for its employees as will be evidenced by the fact that nearly 75 per cent. of the seven and a half thousand scavengers employed are provided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with adequate housing. According to the information collected by the Bombay Labour Office in 1925, 28 out of the 76 textile mills in Bombay City which furnished information for the enquiry had provided housing for their operatives. 7 out of these mills provided residential accommodation only for employees in the Watch and Ward Department and the rooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 64,720 employed. The G. I. P. Railway owns 20 chawls containing 841 one-room tenements and the B. & C. I. Railway owns more than 300 one-room tenements for housing their employees. The Labour office of the Government of Bombay conducted an elaborate enquiry into industrial housing in all personal factories in the Bombay Presidency proper in 1934 as a part of the General Wage Census, but the results of this investigation were not published at the time when we went to Press.

No action was taken by the Local Government in Bombay City for housing general industrial labour till after the end of the war. A

broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay, for dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The original intention of the Directorate was to construct 625 chawls located in 8 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 5½ crores of rupees and a "town duty" of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920. The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal. By the end of 1927, 207 chawls with 16,524 tenements were constructed but only 123 chawls with 8,234 rooms were occupied. These chawls unfortunately do not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs. 16 per month but the actual rents charged were fixed, on an average at barely 50 per cent of the economic rent and accommodation can now be had in the chawls at work at Rs. 5 per single-room tenement on all floors, except for a corner room for which an extra rupee is charged. Rs. 2 extra are charged for rooms in which additional water taps are provided at the option of the tenants. The rents in the Naugum and Sewri chawls are Rs. 7 per room on all floors and for those in the chawls at De Lisle Road Rs. 8 per room per month on all floors. One rupee extra is charged for corner rooms. The rents charged prior to 1st April 1929 were, however, higher for all centres. Frequent strikes in the cotton textile mills and general industrial unrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chawls of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1934 was only 7,343 out of 16,524 rooms available as compared with 8,730 on the same date in the previous year.

Ahmedabad City.—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad. The Textile Labour Union at Ahmedabad published a pamphlet entitled "A plea for Municipal Housing for the Working Classes in the City of Ahmedabad" a couple of years ago for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,706 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,669 tenements, 3,117 tenements have a supply of some sort from wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for

a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills. 5,360 tenements had no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are miserable in quality and grossly insufficient in quantity and that urinals are conspicuous by their absence. Only a few tenements are provided with any sort of drainage. No other drainage arrangement exists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Union in the pamphlet referred to, reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overcrowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work recommended that the Municipality should take as early steps as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes one of the obligatory duties of the Municipality and a growing appreciation of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71, of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the proper classes. Owing mainly to the efforts of Mr. Guzarilal Nanda, Secretary of the Ahmedabad Labour Union, the Ahmedabad Municipality has recently decided to construct model dwellings for the working classes and considerable progress is being made on co-operative lines to provide industrial labour in Ahmedabad with better housing. In 1932-33, the Vankar Co-operative Society constructed a colony of 22 buildings each containing two semi-detached dwellings at Priyatanpur in Ahmedabad. The details of this scheme will be found at page 769 of the June 1933 issue of the *Labour Gazette* published by the Labour Office of the Government of Bombay.

A Census taken by the Bombay Labour office in the early part of 1931 showed that of 69 mills working in Ahmedabad, 34 provided housing accommodation for about 18 per cent. of their employees, the total number of tenements being 3,708 of which 3,057 are one roomed, mostly 144 square yards in area with a cubic space of 1,592 cubic feet, the average rent of which was Rs. 3-5-3 per month.

Bengal Presidency.—Housing is generally provided in Bengal by employers but the extent and quality of the housing depend on the cheap-

ness and availability of land. In the more congested areas in Calcutta, Howrah and the nearer neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at rents varying from annas 8 to Re 1 per room per month. The sizes of the rooms vary from 8' x 8' to 10' x 10' and in some cases to 12' x 10'. In nearly all cases the rooms are constructed back to back and in most *pucca* floors and tiled roofs have been provided with narrow verandahs generally 4' wide used for cooking purposes. Very often the rooms are dark and in none of them can sun light penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. If windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage, water supply and conservancy arrangements in *bastis* are abominable. Government and other public agencies do not provide housing, as in Bombay, for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Industrial Housing Scheme in Bengal are confined almost entirely to Jute Mills and a few other better organised concerns and the majority of factory owners take no active interest in the development of housing. Consequently the Improvement effected during the year 1933 have had no perceptible effect on the conditions as a whole under which industrial workers live.

Madras Presidency—As a result of the exertions of the Labour Department of the Government of Madras, Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in Madras City. Out of 1,530 registered factories a little over 280 factories are reported to have provided housing for a small number of their employees. Almost all plantation estates in the Nilgiris, Malabar and Coimbatore provided "lines" for the cool labour employed. Among recent improvements are a provision of 35 additional houses for the staff of the M & S M Railway Running shed at Pakala, and 15 additional huts at the Chrome Leather Factory at Chrompet.

United Provinces—Out of 330 regulated factories some 90 make provision for the housing of workmen and their families. Altogether about 6,300 single room and 1,400 double room tenements are provided by the employers including 1,247 tenements provided during the year 1933. The McRobertson and Allenganj settlements of the British India Corporation at Cawnpore are two important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for providing housing for some twenty thousand workmen and their families but it is still under discussion. Lines of model

dwelling recently built by the Cawnpore Improvement Trust have been much appreciated by all concerned and a steady demand for the purchase of these houses by individual workmen is reported. The Trust is arranging to build more of such dwellings to be offered on a hire purchase system at Rs 6 per month for 12 years. Except as employers the Government of the United Provinces has done very little in connection with industrial housing. The Improvement Trust of Lucknow has put up a model barrack in the area set apart as an industrial area. In the *bastis* or *hulas* where housing is provided by private landlords the type of tenement available is usually a small mud hut with a room at the back and a room or a verandah in front. The size and height vary. The usual size is 10' x 8'. The normal height is 6' to 8'. The only outlet for ventilation is the small main door. Even such tenements are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces—Housing is provided for about 7,500 workers by some of the larger factories and mills in the Central Provinces. Twenty per cent of textile labour and about 10 per cent of the labour employed in minor industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 15 acres on which the millhands are allowed to build their own houses on payment of a nominal ground rent of annas 4 per annum per 100 sq. ft. Probably the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Messrs Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mill. The scheme is based on a desire to establish a model village. The idea is to build houses of the bungalow type standing on their own ground in plots measuring 36' x 53' with the limitation that building will not be allowed on more than one-third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them.

Bihar and Orissa—All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses. Their design, construction, ventilation and general amenities are governed by the Jharia Mines Board of Health. Workers recruited from villages within five miles from the mine frequently prefer to live in their own villages and walk backwards and forwards to their work. In five collieries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one *dohora* or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licensees are not given unless the standards are complied with. If labourers are

found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built nearly 5,000 residential buildings. Of these, 201 are rented at over Rs 20 per month. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Punjab.—Housing conditions of industrial workers in this Province is reported as continuing to show steady progress. Most of the newly constructed factories have provided quarters for their permanent staff. Although at present less than 30 per cent of the total permanent labour strength of the factories are housed in factory quarters, there has been a distinct advance in this respect in 1933, and in all cases where housing was provided the accommodation was far superior to that which the workers could ordinarily obtain outside the factory premises.

Assam.—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and lives in its own houses. In the mines and oil fields free quarters are provided for the labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces indiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the oil and oil fields are reported as being quite satisfactory. In Assam the tea estates are

regularly inspected by District and Sub-Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour, still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces.—No special remarks are necessary in connection with the question of industrial housing in other provinces. Generally speaking no industrial slums as such or any big urban inflammation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor citizen.

Except in those cases where Government action has been definitely indicated, the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways.—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to nearly twenty-six crores, while the expenditure incurred during the last five years amounts to over seven crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are, however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

HEALTH.

No satisfactory statistics are available regarding health conditions of industrial workers, e.g., morbidity rates among the workers, their average weight, height, etc., and in the absence of any sound statistical data it is not possible to generalise about these matters. The problems associated with health are always difficult. They are much more so in a country where both climate and the poverty and ignorance of the people contribute to recurring outbreaks of tropical and other epidemic diseases. The main cause of ill-health particularly among the workers in Bombay and Bengal, it appears to be the prevalence of malaria in the localities in which they live. Major Covell, the Special Officer appointed by the Government of Bombay to enquire into Malarial conditions in Bombay City who submitted his report in 1928, says, "It (Malaria) is still present in certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Worli and Parel sections. In the northernmost portion of

Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of Malaria and the proximity of mills was most striking, especially in certain cases where a single isolated mill happened to be present, e.g., the Victoria Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area." The anti-malarial measures taken by the City Municipality have however resulted in a gradual reduction of the number of deaths from malarial attacks.

In the mines in the Madras Presidency, Malaria prevails in the Cuddapah district and at every change of season there is a prevalence of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the year and the cold winds during the rainy season from Sandur Hills affect the health of the labourers in the mines of Tonasigeri. Tuberculosis prevails among industrial workers in the United

Provinces and Bihar and Orissa, and *Kala Azar* is common among workers in certain tracts like Bihar and Orissa.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures, however, relate

to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality, etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the mohals.

A table showing (a) Birth-rate and (b) Death-rate per thousand of population and (c) Infant mortality for 1,000 registered births for certain important industrial centres.

Centre.	Period.	Birth-rate per 1,000 of population.	Death-rate per 1,000 of population.	Infant mortality per 1,000 registered births.
Bombay .. .	1933	26.6	23.4	269.00
Ahmedabad .	1929	47.02	49.06	331.65
Sholapur .. .	"	44.03	34.53	228.73

Working conditions.—The factory department in Bombay has done much work in investigating the efficiency of different humidifying and ventilating plants in the weaving and spinning departments of Mills in Ahmedabad. As a result, all the new textile mills which have been constructed in Ahmedabad during the last few years are equipped with efficient ventilating and cooling systems and the benefits both to the workers and the processes involved are well recognised at that centre. There has been an extensive "uplift" in the older mills and there is hardly a mill that has not made efforts in the direction indicated. There has latterly been a marked tendency to increase the pace of improvements in the spinning departments and one group of mills has installed 12 expensive plants that effectively cool and humidify the atmospheres of the spinning as well as of the weaving departments. A few mills in Bombay City have also installed new cooling and humidifying systems. A few other mills provide vacuum stripping apparatus in the carding departments. A plenum system of blowing external air near the workers in the boiling department of a soap factory produced results gratifying both to the worker and the management and it is hoped to extend the method to a few industries where the removal of surplus heat is a difficult matter. An enquiry made into the effect of employment on the health of the dhobi bleachers in Ahmedabad revealed that although there was little history of rheumatism, some are adversely affected by working with bleaching solutions. Several workers were found to be suffering from hyperæmia of the legs, but it was obvious later on that more care was being exercised by the contractors. Most of the dhobi work is done in uncovered tanks in the compounds and no shelters are provided. It is said that the men are used to working in the hot Ahmedabad sun, but even the donkeys used so freely for load carrying take advantage of the shade when they are permitted to do so. The Bengal Reports refer to the question of dust removal in Jute Mills and Tea factories and to the investigations made to determine at what stage dust or fluff impregnation may be regarded as definitely injurious. It is considered that where exhaust trunk extracting systems are deemed to be essential in all factories in an industry the necessity to install such equipment should be promulgated by rule. The continued trade depression, however, precluded the issue of a general order by Government. The majority of firms find the initial cost of such installations prohibitive but a few concerns have provided mechanical ventilation in their factories. Although some improvement in ventilation has been effected during the years 1932 and 1933, the bad design and unsuitability of the majority of the buildings occupied by the smaller factories is stated to be still the chief obstacle to all round progress. In regard to cotton ginning factories the Punjab Reports state that "ventilation is far from satisfactory but apart from a drastic alteration in the method of ginning, little can be done to improve ventilation sufficiently to dispose of the dust in ginning rooms, the cost of such alteration is at present prohibitive." The Central Provinces' Reports mention that ventilation arrangements have

on the whole, shown satisfactory improvement in most perennial factories. In the present conditions, owners of ginning factories are unable to adopt the expensive system of ducts and exhaust fans to overcome the dust nuisance. The provision of ridge ventilation in cotton ginning factories has been a standard practice in the United Provinces in respect of new factories and is reported to have proved satisfactory when combined with a reasonable height of roof. Ventilation in other factories is steadily improving though the progress is not quite rapid due to depressed trade conditions. The extended use of electricity is steadily improving the general standard of lighting and is commended on with approval in the Provincial factory reports for the year 1933. The factory department in the province of Bihar and Orissa has compiled a little guide book to "Safety, Lighting and Ventilation in small factories," based on photometric observations, in order to help interested persons and builders of factories to so adjust the window area as to secure sufficient amount of natural lighting.

Extent of Medical Facilities provided—

The results of a recent enquiry into Welfare work conducted by the Labour Office shows that the provision of facilities for medical attendance and the supply of medicines is fairly general in all the larger labour employing organisations in the Bombay Presidency. The Textile Labour Union in Ahmedabad is the only association of employers which provides medical facilities for its members. There are also Government, Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes. In the United Provinces, many of the larger employers maintain dispensaries but no hospitals. The Dufferin Fund, a private organisation aided by grants from Government and local bodies, maintains female hospitals at the more important towns. The Lady Chelmsford Maternity and Child Welfare League maintains a number of centres for child welfare and the treatment of maternity cases. Many of the employers in the Central Provinces and Bihar have provided well-equipped dispensaries, and medical facilities are within easy reach of the workers in almost all the factories and every important mining area in the Province. Some of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical facilities in the plantations are however, fairly good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. Owing to financial stringency the Indian Jute Mills Association were unable to take any action on the welfare survey conducted by a lady doctor in the mill area and leprosy survey carried out by the school of tropical medicine. In spite of the general depression, the Jute Iron Works built a hospital with up-to-date equipment. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided for all classes of employees. The medical arrangements in a large number of estates are supervised by European medical officer. Well-

equipped hospitals are also provided for the labour force in the mines and oil-fields in Assam. Part-time medical attendance and medicines are provided by the employers in the Asansol Mines Board Area. Medical facilities are also provided in the mines in Madras. In the Jharia Mining Settlement eight hospitals are maintained by employers, the number of beds varying from 6 to 12 in each ward.

All the Provincial Factory Reports for the year 1933 record a year of normal health amongst factory workers. There was no dislocation of industry anywhere on account of epidemics during the year 1933 except perhaps to some extent in Poona on account of the severe epidemic of plague in that City which lasted from July to October. Continued improvement in general sanitary conditions in the larger factories is reported in all provinces. In Bombay concentration on several factories of the bazaar type has led to considerable improvements and a rise in the standard of neighbouring smaller concerns not yet amenable to this Act. The lack of municipal facilities for the disposal of trade waste in Ahmedabad is stated to be a cause of insanitary factory surroundings in that area. Conditions in the Dhurva Tanneries in the Bombay Presidency were investigated during 1932 and considerable improvements were effected. There was marked improvement in the sanitary conditions of factories in the Titagarh area in Bengal on account of the successful installation of a sewerage scheme. The Bihar and Orissa report for 1932 states that the advisability and possibility of appointing Medical Inspectors of Factories was under consideration of the local Government. The United Provinces Report refers to occasional cases of persons suffering from obnoxious diseases being employed in food product factories and states that the Medical Officers of Health were asked to give this question attention in their capacities as Additional Inspectors of Factories with a view to stopping the practice. A Sanitary Inspector was appointed in the Western India Match factory at Thuvottizun (Madras) to be in charge of the anti-maternal campaign. A medical officer has also been appointed at a new factory established in Bombay for the manufacture of lead accumulators.

Maternity Benefits.

In September 1924, Mr N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill, the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund. The Bill, after circulation, was thrown out by the Assembly in August 1925.

The first Province in India to pass a Maternity Benefit Act was Bombay. The Act came into force on 1st July 1929. According to this Act, the payment of maternity benefits is an obligation which is imposed directly on the employer. The Annual Report on the administration of this Act for the year ending 30th June 1933 shows there were 117 claims paid per 100 women employed and the total amount of maternity benefit paid under

the Act was Rs 1,35,813. The statistics for the half year ending December 1933 show that out of an average daily number of 43,809 women employed in the areas to which the Act applies, 3,110 women applied for benefits and that 2,728 women, or 6.2 per cent of those employed, were paid benefits amounting to Rs 64,417-4-0. The Bombay Municipality has started since February 1928, a maternity benefit scheme by which benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days, including the date of confinement, as certified by the Executive Health Officer, if the birth takes place in Bombay, and by a Police Patel or by hospital authorities if it takes place out of Bombay.

An Act was passed by the Central Provinces Council in 1930 on the same lines as that in Bombay. During the year 1933 benefits amounting to Rs 9,333 were paid to 430 women workers as compared with Rs 12,394 paid to 605 women workers in the previous year.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company, the next largest employers of labour in Assam, grants six months' leave on half pay provided the women have been examined by the medical officers and attend hospital once a week. The Assam Oil Company grants leave on half pay for three months. On some estates in Coimbatore District female coolies are fed free for a month before and a month after confinement. On other estates maternity benefit ranges from Rs 3 to Rs 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is arranged.

Labour Commission's Recommendations.

Among the more important recommendations made by the Royal Commission on Indian Labour in connexion with the health of the industrial worker are the following—

(a) India should have an Institute of Nutrition (The Government of India have postponed action on this recommendation indefinitely for want of funds.)

(b) Local authorities should construct sanitary markets in all urban and industrial areas.

(c) Adulteration of Foods Acts should be in force in all Provinces.

(d) In industrial provinces Public Health Departments should be strengthened to deal with industrial hygiene and industrial diseases.

(e) Women should be appointed to public health staff particularly in the more industrial Provinces.

(f) Comprehensive Public Health Act should be passed in all Provinces.

(g) Where piped water supplies are not available special precautions as to purity should be taken

(h) Every provincial health department, every railway administration and all Boards of Health and welfare in mining areas should employ full time malarialogists

(i) A Government diploma for health visitors should be instituted as the recognised qualification required of all women aspiring to such posts

(j) In the larger industrial areas Governments, local authorities and industrial management, should co-operate in the development of child welfare centres and women's clinics, and Government should give percentage grants for approved schemes

(k) Maternity Benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all Provinces, and

(l) All methods should be explored that may lead to the alleviation of existing hardships arising from the need of provision for sickness.

Amendment of the Bombay Maternity Benefit Act It was represented to Government that the Act requires amendment in certain respects and the Royal Commission on Labour have also dealt with the question of maternity benefit. Accordingly the Government of Bombay introduced in the Local Legislative Council on the 11th August 1933

a Bill to amend the Act. The Bill was referred to a select committee on the same day and was passed in 1934. The following changes have been made in the Act —

(a) The maximum period for which a woman shall be entitled to benefit is raised from seven to eight weeks.

(b) The qualifying period of service is raised from 6 months to 9 months

(c) The benefit was payable in three instalments, one at birth of a child and the other two thereafter. The Act now provides for payments to be made either in two instalments, one before and the other after child-birth or in one lump sum payment after delivery

(d) There was no time-limit within which the benefit may be claimed. The Amending Act prescribes a limit of six months after child-birth

The Select Committee did not agree to the proposed changes in the rate of benefit and deleted the clauses in the Bill relating to this question

Under their rule-making powers under the Act, the Local Government made a new rule in December 1933 which makes an employer liable for paying maternity benefit in the event of his closing his factory. A woman entitled to maternity benefit is not to be deemed dismissed within the provisions of Section 8, if she is discharged on account of the closing of the factory in which she is employed.

WELFARE WORK.

(Excluding Health and Housing).

In 1926, the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers' spare time. The Labour Office of the Govt of Bombay conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the *Labour Gazette* for January 1927.

Apart from the few individual employers who have organised welfare work on modern lines, the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early in 1930. In a circular letter dated 8th January, 1930, addressed to the mills affiliated to the Bombay Millowners' Association, this Association requested all mills in Bombay City to give their wholehearted co-operation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it was possible, among other things, to those classes of welfare work which have been uniformly successful, *e.g.*, (a) periodical social gatherings of workpeople, (b) provision of free mill dispensaries as soon as financial considerations permit and (c) the establishment of creches at all mills.

There were in 1934 nearly 30 cotton mills in Bombay City which provided creches and in one of these mills the creche was for unfavourable only. Several of the mills which have creches have staffed the creches with both qualified nurses and *ayahs*. Light food such as milk, biscuits, etc. is given to the children in 17 cases and in 13 of them change of clothes also is provided for under the new factories Act which came into force from 1st January 1935 it is obligatory on all factories employing more than fifty women workers are ordinarily employed a suitable room shall be provided for the use of children under the age of six years belonging to such women. Local Governments are empowered to make rules prescribing the standards for such rooms and the nature of the supervision to be exercised over the children therein. Only seven working mills have no dispensaries for their workmen. A few mills keep patent medicines only. A large majority of the mills which maintain dispensaries have engaged full-time compounders. The E. D. Sassoon & Company have employed two male doctors and a lady doctor for the benefit of their employees and the company also have a staff for antimalarial propaganda. Nearly a third of the total number of the working mills in Bombay provide night schools for the education of their employees. The Sassoons also offer facilities to the workers for technical education. Facilities for recreation of a regular character such as games, wrestling, etc. are provided for by about ten mills. Occasional recreational activities like cinemas, dramas

music, etc., are arranged for in a few mills while in a few others annual social gatherings are held. Tea shops are provided in a good number of mills while cheap grain shops for the benefit of the workers are run by four mills. The Sassoon group of mills allow their workmen to make purchases from their cloth shops at 10 per cent discount on credit, recoveries being made from wages. The employees of 17 mills enjoy the benefits of provident funds while pension schemes for employees are in force in 9 mills. Co-operative credit societies are established in 23 out of the 65 working mills studied.

More complete and up-to-date information on all welfare items will be available as a result of a very comprehensive enquiry conducted by the Bombay Labour office in 1934 as a part of its General Wage Census programme covering all perennial factories in the Presidency Provinces.

The Royal Commission on Indian labour have recommended that there should be a more general extension on the part of the employer of welfare work in its broader sense; and that in the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare centre and health visitor under the supervision of a woman doctor employed by the group.

The All-India Industrial Welfare Conference of 1922 passed a resolution that social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishments was also urged but very little progress appears to have been made so far in this direction.

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholapur and the Currimbhoy Ibrahim Workmen's Institute at Bombay, no other employers have employed any special welfare officers or workers to conduct their welfare activities. But Messrs E. D. Sassoon & Co., Ltd., have appointed a Labour Officer for all their eleven Textile Mills in Bombay City.

In Bihar and Orissa, the Tata Iron and Steel Company has appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar, except at the Empress Mills, no regular staff of welfare officer and workers appears to have been appointed.

In the United Provinces, the British India Corporation employ a full-time welfare superintendent and a trained staff consisting of 4 doctors, 5 nurses, 8 matrons, 8 compounders, about a dozen midwives, 19 teachers and 2 sergeant patrols.

In Bengal, attempts have been made by some jute mills to set up day and night schools but many of these schools are reported to have been closed owing to the lack of interest shown by the employees. Except for the facilities for technical training that are provided at the Ichhapur Rifle Factory, the Cossipore Gun and

Shell Factory and the Government Weaving School at Serampore there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

The welfare centre inaugurated in Clive Jute Mills made good progress during the year 1933. The Indian Iron and Steel Company, Hirapur, established a Baby Clinic in the charge of a qualified nurse. The Burmah Shell Company's Labour Bureau and welfare department at Budge Budge continued to do excellent work. An instance of the progress made is stated to be the success of the night school conducted by the department. A number of workmen who attend the school were, until recently, absolutely illiterate but now many of them are able to fill up money order forms, write out an address, and read a telegram.

This company has also employed a full time Labour officer to look after the labour employed in their oil installation in Bombay.

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are chiefly peopled by millhands. In the Government factories at Kurkee, the Kirkee Education Society which is well supported by the factory authorities conducts six night schools. The Gokak Falls Mills Company maintains one night school for adult workers. In Ahmedabad one mill runs a school for half-timers and eight mills maintain schools for workers' children. Three mills in the Sholapur district and the Government workshop at Dapuri provide for the primary education of half-timers.

The Social Service League, Bombay, maintains several night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers. The Bombay Y M C A. conducts nearly night schools with an average daily attendance of about 200. The Ahmedabad Labour Union conducted in 1933, 10 day schools, 10 night schools, one Nursery school, one boarding school for boys and one boarding school for girls.

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certain selected students for positions in the operating departments. The Company also maintains over twenty schools for the education of the children of its employees.

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employees' children also. The Buckingham and Carnatic Mills maintain a day as well as a night school. The day school is an elementary school with 5 standards and has a technical section attached to it.

In Burma, very few firms provide facilities for education. The Burma Oil Company maintains schools in the Yenang-Yaung Oilfield for about 800 children and proposes to start a night school for its employees. The Burma Corporation makes an annual donation of Rs. 1,000 for the maintenance of the Anglo-Vernacular Middle School at Namtu and is also constructing a school at Baldwin for the education of the children of its employees.

In the United Provinces, the British India Corporation maintains four day schools for boys and girls, two night schools and two industrial classes, for employees. The Elgin Mills at Cawnpore, the United Agra Mills, Agra and the B. N. W. Railway Workshops at Gorakhpur also provide for the education of the children of their employees. The Elgin Mills have built a permanent stage for dramas and purchased a cinema machine for the entertainment of their workers. Messrs. Beggs Sutherland & Co. who are the managing agents for several large concerns, carry on welfare activities in providing schools, free milk to supply pupils, dispensaries, gymnasium and sports, library, recreational programmes, etc.

In the Punjab, only the new Egerton Woollen Mills Company, Dhariwal, maintains a school.

In the Central Provinces and Berar, the Empress Mills in Nagpur have Nursery and primary classes for the children in the crèches. During the year 1932, 552 children received primary education in factory schools as against

763 in the previous year, the fall in attendance being due to a general reduction in the number of children employed. Crèches are attached to six cotton mills and one pottery works in this province. The educational work outside the mills is conducted by the Young Men's Christian Association which has established 9 centres where the mill-workers reside. Of these, 3 centres have night schools. The Empress Mills also make annual contributions of about Rs. 3,500 to other schools where the children of the work-people study.

In Assam, some of the tea gardens maintain schools for children; but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

Welfare Work on Railways.

Recreation—Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for recreation for their employees and their children. The total number of institutes and clubs which have been provided for railway employees and their children amount to nearly 200 for Europeans and Anglo Indians and over 1,50 for Indians.

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide a reading room, indoor and outdoor games, etc., and are generally self-supporting although grants are made from fines' funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the pay-sheets and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.

Sports committees and athletic clubs have been formed on several railways, *eg.*, the G.I.P. and the East Indian Railways with the object of promoting athletic sports among the employees and organizing tournaments. The Indian Railway Athletic Association formed for the promotion and development of inter-railway athletic competitions of all kinds is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-district or inter-divisional competitions are also run by local sports' committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing, wrestling and football competitions are arranged in four groups. In 1931 the North Western Railway provided a stadium within easy reach of the living quarters of the Railway employees at Moghalpura.

The cinema shows and magic lantern lectures which have been recently organized for the recreation of railway employees are growing in popularity with the staff.

The East Indian Railway locomotive and carriage and wagon workshops, Lucknow, have Welfare Committees which meet monthly and dispose of matters brought forward by the various delegates. Such Committees have also been formed in the Perambur as well as the Golden Rock workshops of the South Indian Railway.

Education.—Almost all Railways provide facilities for the education of their illiterate staffs as well as for the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows.—

The N.W. Railway have started three experimental schools for adult workers in the running locomotive sheds at Lahore, Sibsair and Kotli. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees, the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult workmen have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B. B. & C. I. Railway has recently opened classes for imparting instruction in the three R's at 3 centres on the Broad-Gauge and 3 on the Metre-Gauge systems. As an inducement to study, a bonus of Rs. 5 is paid to each man passing a simple test. On the E. B. Rail-

way, the Locomotive Department holds classes at Lunding, Badarpur and Chittagong to assist drivers to qualify as "English speaking" which grade carries a higher pay. The only facilities given by the B. & N. W. Railway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Railway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers, shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M. & S. M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G. I. P. Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under —

About 100 schools for European and Anglo-Indian children and 130 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is about 5,000 and 16,000 respectively. The total expenditure from revenue on the European and Anglo-Indian schools is Rs. 4 lakhs per annum and on the Indian schools Rs. 1.4 lakhs. The Railway Department also aids certain schools for children of railway employees. The total number of children in railway aided schools is about 4,000 (European and Anglo-Indian) and 8,000 (Indian) and the total annual grants made by the Railway are about Rs. 50,000 to each group. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927-28 was Rs. 3.5 lakhs for Europeans and Anglo-Indians and Rs. 28.8 thousands for Indians.

Facilities are also afforded by the grant of passes and concession tickets to enable the children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo-Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr. C. E. W. Jones, C.I.E., F.E.S., on special duty in 1927 with instructions to collect all facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr. Jones' report the Board have now formulated their future policy on the following lines. —

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where necessary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and to parents who are obliged to send their children to boarding schools. The assistance would take the form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community, race or creed.

Several company managed railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Co-operation.—The Railway Administration have noticed that heavy indebtedness degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores for all grades of employees.

Co-operative Credit Societies have been formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases, the heads of the departments are required to be the chairmen of the committees and they have power to nominate some of the members of the committee.

WAGES.

It was in 1873 that one of the earliest attempts to collect wage statistics in India was made by issuing instructions to District Officers to submit half yearly returns showing the average monthly wages of certain classes of skilled and unskilled labour. The returns thus collected were utilized for compiling a series of comparable statistics of wages for selected Districts in each Province and these statistics were published in the publication "Prices and Wages" issued annually by the Director-General of Commercial Intelligence and Statistics. A reference, however, to Mr. Dut's Report on an Enquiry into Rise of Prices in India, would show that these statistics were found to be wholly unreliable and consequently these half yearly returns from District Officers were discontinued from

1910. In their place a quinquennial wage census in all Provinces was obtained except in the Central Provinces where an annual return from District Officers continued. The first quinquennial wage census was held in 1911-12 and the second in 1916-17. Statistics regarding wages continued to be published in "Prices and Wages" which gave the results of the quinquennial wage censuses in respect of a few urban and rural occupations. As the statistics were still far from satisfactory the third wage census, which was due in 1921-22, was abandoned except in Madras and the Punjab. In 1923 an attempt was made by the Government of India to hold an All-India census of industrial wages with the active and voluntary co-operation of employers, but nothing could be done partly

because a number of employers either failed to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing to financial stringency. The annual issues of Prices and Wages were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole.

In the United Provinces a scheme for a census of Industrial Wages to be taken along with the regular census was considered but was not carried through. A periodical survey of wages has been carried out every five years since 1912 in the Punjab. These surveys deal with the wages of certain classes of workers in three principal towns, in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood. Beyond the figures of average monthly wages of certain classes of labour submitted by factories in all Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available. In Madras quinquennial wages censuses have been conducted since 1908 showing the average wages of certain artisans (as well as farm servants employed as agricultural labour) in respect of homogeneous tracts and districts. These censuses, however, only relate to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour, and particularly the rates of wages on tea estates in Assam, was made in 1921-22 by a Committee appointed by the Government of that Province. The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively. Early in 1934 there was a considerable agitation among labour ranks in Bombay City for a Government enquiry into alleged large reductions in wage rates in textile mills in the Bombay Presidency, particularly in Mills in Bombay

City. The Government of Bombay decided that the Commissioner of Labour should conduct a Departmental enquiry into wages and unemployment in the Bombay Cotton Textile Industry and this enquiry covering about a dozen principal occupations in all Mills in the Presidency was launched in March and the Report of the Enquiry was published in June 1934. The Government of the Central Provinces and Berar conducted a similar enquiry on parallel lines and the report of that enquiry was published in August 1934. Apart from these enquiries the Bombay Labour Office has also conducted enquiries into (1) Wages of peoples in Bombay (2) Agricultural Wages, (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City. The results of all these enquiries have been published either in the form of special Reports or in the "Labour Gazette."

The Government of Bombay have now launched a general wage Census which is intended to cover in about two years, all factories, transport workers, workers in docks, municipalities and building trades, etc. The first part of the Census held for the month of May 1934 covered every perennial factory in the Bombay Presidency. The enquiry was conducted on the basis of the muster roll and essential information regarding the number of days worked during a pay period by each worker, his rate of wages and his earnings was called for. Seasonal factories will be covered for one month of intensive working during the winter months of 1935-36 and all non-factory industries and organisations will be covered between March and December during the next or the following year. To the best of the knowledge of the Labour Office no other country in the world has attempted an enquiry into wages on such a gigantic scale and the results of the Census will be of a far reaching character. The Labour Office hopes to publish all the reports covering perennial factories by the end of March 1936.

WAGE RATES.

Agriculture—Whether wages paid to agricultural labour in India have kept pace with the increase in the cost of living is, for several reasons, a very difficult question to answer. Firstly conditions vary so markedly between province and province that it is almost impossible to obtain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers engaged in different agricultural areas in India. For example, in the Punjab, there are four forms of wages, such as (a) purely cash wages, (b) cash wages with supplements which may consist of food, tobacco, lodging, bedding, clothing, etc., (c) purely grain wages, and (d) wages other than in cash or grain. In the Punjab the results of the last quinquennial wages survey which was held in December 1927 show that the following were the average daily

wages of the three important classes of agricultural labour in rural areas in the Punjab—

Carpenters ..	16 to 32 annas a day.
Masons ..	16 to 38 annas a day.
Unskilled labourers ..	5½ to 16½ annas a day.

As regards the last occupation it was pointed out that the most frequent wage was between 7½ to 8½ annas. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour, viz., skilled labour, ordinary labour and field labour in each of the 26 districts of the Bombay Presidency separately for urban areas and rural areas for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1933 have been published in the Bombay Labour Gazette.

and in the Bombay Administration Reports. The wages prevailing in other provinces for similar types of labour do not compare very unfavourably with wages in the Bombay Presidency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in provinces which are mainly agricultural are on a lower level than the money wages in Provinces which are highly industrialised such as Bombay and Bengal. There is no doubt whatever that wages considerably improved in all parts of India between 1918 and 1925. Taking the Bombay Presidency as a whole the downward

tendency in the level of wages which set in 1925 and continued up to the end of 1927 was checked during the year 1928 during which period wages of all classes of agricultural labour, except field labour in urban areas and ordinary labour in rural areas, either remained stationary or showed a definite upward tendency, but there has been a sharp fall in agricultural wage rates during the last four years.

Comparison of conditions in India to-day with the pre-war year shows that during this particular period the condition of the Indian labourer has undoubtedly improved. This is amply proved by the figures given below showing the index numbers of daily average wages of skilled labourers, ordinary labourers and field labourers for urban areas and for rural areas for the Bombay Presidency.

AGRICULTURAL WAGES (NOMINAL).

Index Numbers for the Bombay Presidency (including Sind) 1913=100.

Year	Urban areas.			Rural Areas.		
	Field Labour.	Ordinary Labour.	Skilled Labour.	Field Labour.	Ordinary Labour.	Skilled Labour.
1922	189	192	195	170	162	179
1923	200	200	196	171	171	187
1924	195	196	209	176	181	191
1925	221	208	224	206	181	211
1926	221	204	216	198	181	215
1927	200	192	211	176	176	206
1928	191	192	212	186	175	210
1929	188	193	206	180	179	213
1930	174	179	198	171	173	205
1931	153	157	185	139	143	172
1932	144	151	180	131	135	165
1933	137	141	178	127	127	160

The Cotton Textile Industry—The most important centres of the cotton textile industry in India are situated in the Bombay Presidency. The main sources of information as regards the wages paid in this industry are the Reports of three Enquiries conducted by the Labour Office of the Government of Bombay into Wages and Hours of Labour in the Cotton Mill Industry in the Bombay Presidency and the two Bombay and C. P. and Barar reports of the departmental enquiries into wage cuts.

It is claimed that the 1926 Enquiry as compared with the previous two Enquiries, was more satisfactory in its method, more detailed in its scope and more accurate and reliable in its results as the information collected related to each individual worker and not to groups of workers in each occupation as was the case in the previous Enquiries. The results of this Enquiry give among other things, figures for average daily earnings of all occupations of cotton mill operatives, average monthly earnings for operatives covered in Bombay and Sholapur, the average number of days worked, the number of operatives working 'Full time' i.e., working on all the working days during the Census month, the average earnings of those working full time, frequency of attendance for the mills in Bombay,

the percentage absenteeism by departments and details regarding amounts of bonuses secured by the workers.

Wages in the Bombay and the Sholapur mills are paid monthly irrespective of the fact whether they are based on time rates or piece rates or fixed on a daily or a monthly basis or in any other manner. While in the case of the Ahmedabad mills wages are paid fortnightly or by 'haptas' referring to a period generally of 14 days for piece workers and to a period of 16 days for time workers. Wage periods of a week or 'haptas' of 8 days are also to be found.

Different systems are adopted at these three centres with regard to the methods of calculating wages. In the case of the mills in Bombay City there is first a "basic" rate to which was added a dearness allowance of 80 per cent. for male piece workers and 70 per cent. for male time workers and all female workers. Those mills which grant a good attendance bonus add the amount of the bonus granted, to the gross wage from which are deducted any fines that might be inflicted before arriving at the net wages payable. The term 'basic' in the case of the Bombay mills may be generally considered to apply to the pre-war year although in the case of some

individual mills it might apply to any year between 1918 and 1918 in which year the first increase of 15 per cent. was granted as dearness allowance. This was increased to 35 per cent on the 1st January 1919. The next increase granted on 1st February 1920 was 20 per cent extra to male workers on time rates and to female workers both on time and piece rates, and 40 per cent. extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively. On the 1st November 1920 the 55 per cent. was raised to 70 per cent and the 75 per cent to 80 per cent. During the years 1932 and 1933 most of the working Mills in Bombay reduced wages by effecting cuts in these allowances. There has been no uniformity in the matter and although in some mills allowances of 50 per cent or over are granted these allowances in other mills have been reduced to 25 per cent or less. The weighted average cut for the whole industry in Bombay amounts to about 18 per cent.

As a result of the discussions between the Government of Bombay and the Bombay Millowners' Association which followed the publication of the report of the Departmental Enquiry, the Association decided to recommend to all their members the adoption of consolidated rates for workers on time rates of wages. Uniform standard rates were published and these have been adopted by most Mills in Bombay City. Individual Mills were, however, permitted to continue the dearness allowances in the case of workers on piece rates of wages but these allowances were to be increased by five per cent from 1st January 1935 in view of the reduction in Statutory weekly hours from 60 to 54.

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the different additions and deductions before arriving at the final earnings. In Ahmedabad, the millowners and the local Labour Union were engaged for over a year in examining a proposal by the owners to reduce wages by 25 per cent. After protracted discussions the question was referred to a Conciliation Board consisting of Mr Chamanlal Parekh, President of the Ahmedabad Millowners' Association and Mr Shankarlal Bunker. In subsequent discussions, Mr Mann Suhedkar replaced Mr. Bunker as the representative of Labour. On the breakdown of these negotiations the whole question was referred to Mr Patkar late Judge of the Bombay High Court, as an umpire, but in the meanwhile the employers and the workers were able through the mediation of Mr M. K. Gandhi at Delhi, to reach a satisfactory agreement acceptable to both parties and this agreement known as the Delhi Agreement was signed by both the parties in the presence of Mr Patkar in Bombay in January 1935. *Inter alia* the agreement laid down a uniform cut of 61 per cent in the wages of all workers on both time and piece rates of wages provided that the earnings of two loom weavers should not be reduced below Rs 41-4-0 for 26 working days. Standardisation of piece rates is to be effected after 1st January 1936 and with a view to provide for a prompt settlement of all wage questions on either side in future, the parties were to evolve a scheme for automatic adjustment of wages.

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad. There are five items which go to make the full wage of an operative. These items are (1) the basic rate, (2) dearness allowance which is 35 per cent in the case of all female workers and all male time workers and 40 per cent in the case of all male piece workers, (3) the number of grace days granted for which payment is made, (4) bonus, and (5) the benefit derived for the grain concession. The Sholapur Millowners decided to reduce wages by 12½ per cent with effect from 1st January 1934. The proposal was met by a violent strike which lasted for nearly Three months but the workers were forced to accept the cut.

As far as cotton textile workers in the Bombay Presidency are concerned the results of the 1926 census of wages in textile mills in Bombay, Ahmedabad and Sholapur conducted by the Bombay Labour Office would, to a certain extent still hold good if the average of the cuts effected in Bombay (about 20 per cent), Ahmedabad (61 per cent) and Sholapur (12½ per cent) are applied. The following table gives the average daily earnings for men, women, children and all adults employed in textile mills in the three centres mentioned on this basis—

Centre	AVERAGE DAILY EARNINGS FOR			
	Men	Women	Children	All adults.
Bombay	Rs a p 1 3 0	Rs a p 0 9 0	Rs a p 0 5 0	Rs a p 1 1 0
Ahmedabad	1 5 0	0 11 9	0 5 0	1 3 4
Sholapur	0 14 5	0 5 10	0 3 6	0 12 10

The average monthly earnings of workers in different age and sex groups in the Bombay and Sholapur cotton mills, it worked out on the same basis as in the above table, would be as follows—

Sex and Age group.	Average monthly Earnings* in	
	Bombay	Sholapur.
Men	Rs a p 30 1 9	Rs a p 20 15 0
Women	14 3 0	8 12 3
Children	5 0 0	5 0 0
All Adults	26 5 0	20 0 0

*Similar figures cannot be worked out for Ahmedabad owing to the absence of wage payments on the basis of monthly and fortnightly, bi-monthly or 16-day "hapta" payments.

The figures in the table give average monthly earnings after allowing for absenteeism. It is interesting however to ascertain what the average monthly earnings would be for workers putting in full time, i.e. without remaining absent. The following table gives the figures of

average monthly earnings of full time workers in textile mills in Bombay, Ahmedabad and Sholapur after applying the cuts effected in the last three years, the figures for Ahmedabad being arrived at by multiplying the average daily earnings by 27

Sex and Age group	Average monthly earnings of full time workers in					
	Bombay		Ahmedabad.		Sholapur.	
	Rs	a p	Rs	a p	Rs	a p
Men ..	36	6 0	36	2 0	23	5 0
Women	16	0 0	19	11 0	10	0 0
Children			8	11 0	6	2 0
All adults	32	3 0	32	13 0	21	0 0

The Report of the Departmental enquiry conducted by the Bombay labour office last year into Wage Cuts and Unemployment in the Cotton Textile Industry in all centres in the Bombay Presidency contains a wealth of most valuable information both on wages and the extent of "rationalisation" attempted and effected in this industry during the last few years. The enquiry was conducted on the basis of the sample method and the ten most numerically important occupations which between them cover about 70 per cent of the total number of workpeople employed in the industry were studied. The results are presented for six centres (1) Bombay City, (2) Ahmedabad centre, (3) other Gujarat centres, (4) Sholapur Centre, (5) Khandesh Centres, and (6) Southern Mahratha Centres. The average daily earnings for the ten occupations studied in these six centres are as follows —

Occupation	Bombay	Ahmedabad	Gujarat excl Ahmedabad	Occupation	Sholapur	Khandesh	Southern Mahratha
	Rs a p	Rs a p	Rs a p		Rs a p	Rs a p	Rs a p
Drawing Tentersmen	1 2 8 1	3 11 0	14 5	Drawing Tentersmen	0 12 11	0 13 9	0 11 0
Shubbing Tentersmen	1 3 10 1	5 11 1	1 8	Shubbing Tentersmen	0 11 8	0 13 10	0 13 1
Inter Tentersmen	1 3 2 1	1 5 1	0 0	Inter Tentersmen	0 13 2	0 13 1	0 12 1
Roving Tenters	1 2 4 1	3 10 0	14 6	Roving Tenters	0 12 3	0 11 11	0 11 1
Ring Riders	0 14 10 1	0 10 0	12 9	Ring Riders	0 10 7	0 10 4	0 8 1
Tarwallas*	0 13 2			Tarwallas*	0 8 0	0 8 0	0 5 7
Doffers*	0 10 10 0	11 7 0	7 11	Doffers*	1 7 3	0 6 0	0 5 2
Two Loom Weavers	0 8 10 1	14 11 1	10 6	Two Loom Weavers	0 8 0	1 4 2	0 15 3
Winders-Women	0 11 9	0 11 11	0 8	Winders-Women	0 5 8	0 7 2	0 6 3
Reelers-Women	0 11 0	0 12 2	0 9	Reelers-Women	0 5 6	0 8 0	0 6 3
All Workers	1 4 8 1	6 0		All Workers	0 12 0		

*In the case of these occupations the averages in most cases are for men only and in some for both men and women workers

The real wage index number for cotton mill workers in Bombay in April 1934 as compared with July 1926 was approximately 111, for Ahmedabad it was 154 and for Sholapur for February 1934 as compared with July 1926 was 115

The Provincial Annual Reports on the administration of the Factories Act often contains some figures regarding average monthly and daily earnings for some of the more numerically important industrial occupations. Such figures are, however, not compiled on any recognised statistical principles. Nor are they based on enquiries covering all units in particular industries, and they are generally collected from a few employers. The figures given in the following table should therefore be considered merely as a nominal guide to general wage rates and not as of any particular value for purposes of valuation.

Occupations	Average Monthly Earnings in						Average Daily Earnings in the Madras Presidency.
	C P and		Bengal		Punjab

Jute Industry.

The jute industry holds the premier position amongst the industries in the Bengal Presidency; The following table gives the average monthly wages of some important occupations in a jute mill. The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills

Department.	Designation.	Average monthly wages.	
		Multiple shift.	Single shift.
	<i>Men.</i>	Rs a p	Rs a p.
Roving Machines	Rovers	12 15 0	14 7 0

Gins and Presses.

The male coolies in the gin factories in Madras and the Punjab earn on an average annas 8 per day while the female coolies get only as. 5-1 and as. 6 respectively. In the Central Provinces the average daily earnings of male and female coolies are as. 10-2 and as. 5-10 respectively.

The average daily wages of female press coolies in Madras and the Central Provinces amount to annas 5-10 while those of male coolies amount to annas 9-6 and annas 13-10 respectively.

The Plantations.—Labour in the tea gardens in Assam is paid on a piece-work basis.

In addition to the standard daily task which the worker must execute in order to earn his wages (called *Harwa*) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of a second task the payment for which is known as *thoda*. In some cases where it is impracticable to prescribe a definite task as in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work in the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage-earners. The joint earnings of a family must always be taken into consideration. The average family of a labourer

has been calculated as consisting of one working man, one working woman, about three-tenths of a working child and non-working child and about two-tenths of an adult non-working dependant. The following table gives the average monthly earnings of the labourers in the tea gardens in Assam in March 1933

Periods of Wage Payment--There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organised industry in India. In scarcely any industry is there a single period of wage payment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are frequently paid for different periods. The month, the fortnight and the week are generally the periods of wage payment in Cement and Brick Works, Cotton Ginning and Pressing Factories, Flour Mills and Engineering Works. Monthly payment of wages is mainly adopted for workers in Printing Presses, Municipalities, Tramways and Railways. In the

Cotton Mill Industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In mines, tea gardens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different industrial establishments, while the most general system in the case of casual labour is of a daily payment of wages.

Periods elapsing before payment--The "waiting period" or the time which elapses between the end of the period for which wages are earned and the date of payment varies considerably from industry to industry and from establishment to establishment in the same industry. It may be generally stated that the longer the wage period the more delayed is the payment of wages. Monthly wages are not paid so promptly as fortnightly wages, weekly wages are withheld for still shorter periods and daily wages of casual labour are nearly always paid on the day on which they are earned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 20 days in the case of monthly payments, 5 to 7 days for fortnightly payments, and 2 to 4 days in the case of weekly payments. Another factor which affects the period of waiting is the method of payments. Where workers are paid on piece rates, intricate calculations are required to ascertain the amount due, and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay. The payment of Wages Bill under reference to a Select Committee of the Legislative Assembly as we go to Press provides that all wages to factory workers for whatever period they may be calculated, must be paid within seven days of the end of the period for which they are due.

Indebtedness prevails to a very great extent among labourers, but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquiries into the workers' family budgets for different centres. From the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50. Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards urban and industrial labourers it may safely be assumed that a great majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent. of the wages of the labourers are taken away on pay days by money lenders. The mine managers of the Jharia coalfields in Bihar and Orissa generally put this figure at one week's wages. It is also stated that the extent of indebtedness varies with caste and social custom. In Bombay City, interest on debts

forms nearly three per cent. of the total monthly expenditure. Of the families considered for the Labour Office enquiry no fewer than 47 per cent. were in debt. The extent of the indebtedness of the family in debt is ordinarily the equivalent of two and a half months' earnings. The extremes were 14 months' and one-third of a month's earnings respectively. As regards single men, for whom 60% budgets were collected, 45 per cent. were in debt, the average expenditure on interest being as 12-3 and the average expenditure on interest for those in debt being Rs. 1-11-2 per month. Enquiries for the Bombay Port Trust workers showed that over 80 per cent. of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months' income. In Ahmedabad during 1926 about 69 per cent. of the families were in debt. The amount of debt varied from a few rupees to many times the monthly income. According to an enquiry made by the Labour Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City, 63 per cent. of the cotton mill workers' families in Sholapur were in debt, the extent of which varied from less than a month's income to many times the monthly income. In 49 per cent. of cases, however, a family's debt was equal to between one and four months' of its income.

Bonus and Profit Sharing Schemes.—"The successful working of a profit sharing scheme pre-supposes the realisation by the worker of an identity between the various interests engaged in the concern and a conscientious effort on their part to do their best for its maximum success. The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of co-operation will be realised in a substantial measure in practice." The only solitary concern in which profit sharing schemes have been tried are the Tata Iron and Steel Company, and in the Buckingham and the Carnatic Mills. In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs. 300 per mensem or Rs. 10 per day, whose work contributes to the production obtained and who have been in the Company's service for at least six months. In the Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared.

Bonuses are paid for a variety of reasons. Some concern grant bonus for regular attendances and for economical utilization of material. In some collieries in Bihar and Orissa a worker is paid a sort of bonus for working six days a week. A bonus is also being granted for raising

and loading extra tubs. The Tata Iron and Steel Company grant bonuses, (1) for general production, (2) for departmental output, and (3) regular attendance. This is paid to all employees drawing less than as. 8 per day. The Company has also introduced a 'Jack pot scheme'. The idea of this scheme is that if 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present, the wages which would have been payable to the absentees are distributed amongst those present.

The system of paying bonus in addition to a cash wage either for better work or for better attendance used to obtain in several industrial concerns in the Bombay Presidency, especially in cotton textile mills but, except in Ahmedabad where bonuses are paid for better attendance and for better efficiency, the majority of the mills which used to pay such bonuses have either consolidated these bonuses with pay or have abolished them altogether. In countries which have no legislation for the control of deductions which may be made from wages on account of fines, the bonus might be regarded as a voluntary gift paid by the employer to the worker who attends regularly without absence or produces work better than specified standards but in countries where 'truck' legislation exists, the bonus easily degenerates into a device whereby an employer tries to get round the Act which lays down percentages of wages beyond which deductions on account of fines shall not be made by dividing the wages into part wages and part bonus. In the Ahmedabad textile mills all weavers who produce 80 to 85 per cent. efficiency on quantity production are paid a bonus of eight annas per loom per fortnight. In this centre all damaged cloth is handed over to the weavers and its cost at wholesale price is deducted from their wages. In the case of minor defects the weavers are fined. As the total estimated bonus of the deductions made from the Ahmedabad weavers' wages both on account of fines and damaged material handed over amounts to more than Rs. 15 lakhs annually, the efficiency bonus is not so profitable to the worker as it would appear to be. The good attendance bonus also operates very harshly in certain cases. In one mill in Western India, workers earning Rs. 30 or under a month are paid a bonus of 4 annas a week for a complete week's work and a further bonus of eight annas a month for a complete month's work. If a worker loses a day he loses twelve annas and if the day lost be a Saturday preceding a closed day he loses two thirties of his monthly wages.

Good attendance and efficiency bonuses are not granted in Government, local board and public utility concerns.

WAGES ON RAILWAYS.

No information more recent to that for the year 1929 is available regarding wages paid on Indian Railways. In that year every individual system and the Railway Board, in the memoranda of written evidence submitted to the Royal Commission on Indian Labour, gave statistics of rates of pay. The following information, therefore, relates to the year 1929 but it is understood that all-round reductions have been made on almost all railway systems during the last two or three years.

Owing to the different types of grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of railway servants on some principal railways have therefore been set out in the tables below. The limits of pay given in the tables, show the minimum of the lower grade and, the maximum attainable the higher grade.

Statement showing scales of pay of important classes of Railway servants other than Workshop employees and Colliery Staff on the principal Railways.

N. B.—These rates are exclusive of Overtime and Piece-work profits.

* The scales of pay for the G. I. P. Railway are per mensem.

The following rates may be taken as representatives of daily wages of workshop employees in important centres —

Centre	Unskilled.		Semi-skilled.		Ordinary skilled.	
	As	p	As	p	As	p
Bombay	14	0	to 16	0	17	0 to 21 0
Lahore	10	0	„ 12	0	14	0 „ 18 0
Lillooah	9	0	„ 11	0	10	0 „ 16 0
Lucknow	7	6	„ 10	9	10	0 „ 18 0
					16	0 „ 36 0

Besides the usual pay the employees of the railways are granted allowances and perquisites for special work, climatic and local conditions, etc.

Amount sent to villages—In the absence of a completely urbanised industrial labour force in India, the practice of remitting part of the wages earned by workers in industrial centres to their place of origin appears to be very common. But no authorised or statistical information for a definite period of time is available as regards the amounts sent by workpeople in this manner. If statistics pertaining to this subject were compiled, it would help a good deal in estimating the agrarian content of Indian industrial workers. In the Central Provinces and Bihar 80 per cent of immigrants from the United Provinces leave their families behind in their villages to look after cultivation. These labourers are reported to be remitting more than 50 per cent of their income home. The other immigrants in that province from Central India and the Bombay Presidency are said to be sending 25 per cent of their earnings to their homes. Estimates of amounts sent by money order by the various post offices in the Jute mill areas in Bengal are annually published in the reports of the Indian Jute Mills Association. The figure for 1928 comes to Rs 1,73,57,816-1-2, but it does not purely represent the amounts sent by Jute mill employees only. Labourers from coal mines in Bengal coming from outside the coal fields are reported to send or take home to their villages from 30 to 40 per cent of their earnings. In the case of the miner in the mining fields of Bihar and Orissa it is roughly estimated that he sends home all his savings which amount to about 8 annas to Re. 1-8-0 per week. Results of a special enquiry made in the case of an important cotton mill at Cawnpore in which wages are paid fortnightly showed that during the particular period of two weeks covered by the enquiry, 3·8 per cent of the wages received by workmen was remitted by money orders through the office attached to that mill. In the course of its family budget investigation,

the Labour Office of the Government of Bombay collected some information regarding remittance of amounts by workers' families. In Bombay City a large number of workers do not maintain an establishment, but live as boarders and though married keep their dependants in their villages. In the case of resident families the average monthly amount remitted comes to Rs 2-1-11 which constitutes 4·23 per cent of the family income which is Rs 50-1-7 per month. In the case of persons living singly in Bombay City, the average monthly remittance comes to Rs 11-7-1 which constitutes 36·2 per cent of their monthly income. The labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore remittances to dependants is not an important item in the worker's budget. It appears that nearly 7 per cent of the working class families in Ahmedabad remit money to their dependants living away from them. The average for only those families remitting money comes to Rs 6-6-9 per month. Sholapur draws its labour force from the immediate neighbourhood and the labour there is not of the same cosmopolitan character as in Bombay. Of the total number of families whose budgets were collected during the family budget enquiry at that centre only 6 per cent reported that they had to remit money every month to their dependants in villages. The average of the amount remitted by such families comes to Rs 4-12-7.

Deductions—Deductions from wages on account of fines and for services rendered by an employer to his workmen is a subject which has been engaging the attention of the Government of India since 1926. In that year, the Government of India requested all local governments to make enquiries, in their respective administrations, as to the extent to which fines and other deductions were being realised by employers in India from their workpeople.

The views of the local governments were also invited on the desirability of taking any action, legislative or otherwise to counter any abuses which might be found to prevail. The Labour Office of the Government of Bombay conducted a very comprehensive enquiry into the subject covering all factories, railways, municipalities, transport services, commercial houses, shops, hotels, etc., and the results were published in the form of a special report. As a result of its investigations that Government came to the conclusion that fining was an abuse grave enough to require legislation for its control and recommended accordingly. The subject was again examined in 1928-29 by the Bombay Strike Enquiry Committee (The Fawcett Committee) in connexion with the standardised rules put up by the employers and the demands put up by the workers during the prolonged general strike in the cotton mills in Bombay City in 1928. The Committee recommended *inter alia*, that deductions from wages on account of fines should not exceed two per cent of an operative's earnings during a particular pay period. The Millowners' Association Bombay, accepted this recommendation and it is very noteworthy that almost all textile mills in Bombay which are affiliated to the Association have limited their monetary punishments within this limit. There is, however, no control on fining in textile mills in Ahmedabad. In that centre the work of 'cutlooking' or scrutinising manufactured cloth is often entrusted to contractors who often pay a lump sum every year to the mills for this privilege. Commissioners varying from six annas to twelve annas in the rupee on all fines inflicted is paid by the mill to the contractor. The system is also closely linked up with that of handing over damaged cloth to the worker concerned and deducting its value at cost or wholesale price from the worker's wages. The cutlooker also receive commissions on the value of the cloth handed over. It is estimated that these deductions in the Ahmedabad cotton mills amount to nearly if not more than fifteen lakhs of rupees every year. The matter is a grave abuse and a scandal which calls for immediate legislative action. The action already taken by the Government of India in implementing the

recommendations of the Royal Commission on Indian Labour on the subject have already been dealt with elsewhere in this section.

The Royal Commission on Indian Labour have made several important recommendations in connexion with the income of industrial workers and the question of their indebtedness. In discussing the possible application to India of the minimum wage Convention adopted at the 1928 session of the International Labour Conference, the Commission are of opinion that the convention, "in referring to trades in which wages are exceptionally low, must be regarded as having in view trades in which wages are low, not by comparison with western or other foreign standards but by comparison with the general trend of wages and wage levels in kindred occupations in the country concerned." If the principle of the minimum wage is to be applied to India, they consider that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining. The Industries indicated for a critical study of conditions are mica, wool cleaning, shellac, bidi (the indigenous cigarette) manufacturing, carpet weaving and tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation. Full information as to wages and conditions should be collected and if the surveys indicate 'sweating' the trades should be denigrated and the number and the composition of wage Boards should be decided. In the setting up of wage boards important criteria for consideration should be the cost of enforcement and a policy of gradualness should not be lost sight of. If the investigations appear to warrant minimum wage fixing machinery, the necessary legislation for setting up such machinery should be undertaken. These recommendations are under the consideration of the various Provincial Governments and the Government of Bombay have already initiated a general wage census to be completed in about three years in order to collect all possible information on the subject of wages in all types of industrial concerns in the Bombay Presidency.

COST OF LIVING AND STANDARD OF LIFE.

The publication of a cost of living index with a pre-war base for the working classes in Bombay City was started in the *Labour Gazette* from September 1921 and the scope and method of its compilation are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April

1929. The index number is based on what is known as the aggregate expenditure method and includes in all 24 items representing food, fuel and lighting, clothing and rent. The table below gives the Bombay working class cost of living index numbers month by month from January 1918.

Bombay working class cost of living index numbers by months

The Labour Office conducted in the year 1926 an enquiry into working class budgets in Ahmedabad and the results of this enquiry have been used in the construction of a cost of living index for that centre. The Ahmedabad working class cost of living index number has been compiled on a post-war base and has been

published in the *Labour Gazette* since January 1930. Items representing food, fuel and lighting, clothing, house-rent and miscellaneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1933.—

Cost of Living Indexes have, during recent years, been compiled for Nagpur and Jubbulpore in the Central Provinces (with January 1927 as base) and for four classes of industrial workers in Rangoon in Burma (with 1931 = 100). The monthly figures of the cost of living index numbers of these six indexes during the year 1934 were as follows —

Month.	Nagpur	Jubbulpore	Rangoon			
			Burmans	Tamils, Telegus and Oriyas	Hindu-standis	Chittagonians.
January .	57	52	87	90	90	86
February .	57	52	88	90	90	86
March .	54	52	86	89	89	84
April .	54	53	87	90	89	86
May .	54	53	88	91	89	87
June ..	57	54	90	92	90	88
July .	58	55	88	91	89	86
August .	57	54	88	92	89	87
September ..	57	56	90	94	91	90
October .	58	56	88	94	91	88
November ..	59	57	85	92	90	86
December ..	57	56	84	91	89	85
Average for year ..	57	54	84	91	90	87

Standard of Life—Very little information is available regarding the standard of living of the working classes in India. The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composition, income and expenditure of the family. To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquiries by what is known as the extensive method, an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases. The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the census method. It is essential that the sample should be representative in order to yield reliable results.

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926, the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living, enquiries should be conducted generally at intervals of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides, the composition of the household, the industries and occupations of members of the family, the nature of the housing accommodation and the amount of each important item of family income and expenditure together with quantities of purchases, where practicable. It was agreed, however, that a less detailed investigation omitting the particulars of the family income would be sufficient where the sole object of the enquiry is to provide weights for the calculation of cost of living index numbers.

Family budgets were collected by the Labour Office for 3,076 working class families in Bombay City in 1921-22 and the report based on the results thereof was published in 1923. A new family budget enquiry in Bombay City was

undertaken by the Bombay Labour office in 1932-33. The Report of this enquiry has been submitted to Government and will shortly be published. Weights based on the results of this enquiry are to be used in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 985 budgets of working class families in Ahmedabad in 1926 and 1,133 budgets of cotton mill workers in Sholapur in 1925. The reports based on the results of these enquiries were published in 1928. A second family Budget enquiry for Ahmedabad was conducted in 1934 when over a thousand budgets were collected, the figures are in process of tabulation and the report of this enquiry will be published early in 1936. A small family Budget investigation for cotton mill workers in Bombay City was also conducted by the Labour Office in 1930 but the results of this investigation have not been published so far.

In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number. But the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

The Labour Statistics Bureau, Rangoon, which was established by the Government of Burma in 1926, has made an extensive enquiry into the Standard and cost of living of the working classes in Rangoon and the report based on 4,309 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu, Tamil, Oriya, Hindustani, and Chittagonian workers. Separate index numbers for each of the different classes of workers have also been published at the end of the report. 1,002 budgets for the working class families in Nagpur and 507 budgets for working class families at Jabulpore were collected between September 1926 and January 1927 for compiling cost of living index numbers for these two centres. The figures for the Nagpur, Jabulpore and Rangoon Indexes for the year 1933 have been given in the above table.

TRADE UNIONS.

The history of trade unionism in India is a history of recent years. It was not until 1918 that labour had begun definitely to organise itself. Previous to that year very little effort appears to have been made to establish organisations of labour. The earliest association of workers in India was the Amalgamated Society of Railway Servants of India and Burma which had been registered under the Indian Companies Act and its main activities were in connexion with the provision of various benefits to its members, such as Legal Defence, Sickness Insurance, Life Assurance, etc. After the Indian Trade Unions Act, 1926, came into force this Association registered under it as a Trade Union with the new name of the National Union of Railwaymen of India and Burma. The Bombay Postal Union, founded in 1907, mainly

for the clerical classes employed in the Bombay Post Office, a Union of workers in the Ahmedabad cotton mills formed in 1917, the Clerk's Union, Bombay, established in April 1918 in order to organise the various classes of clerical labour employed in commercial and other offices in Bombay City, and the Madras Labour Union formed in 1918 for the textile workers in the three mills in the city of Madras, were the main labour organisations in existence at the end of the year 1918. In addition, there existed certain benevolent social institutions such as the Kamgar Hitwardhak Sabha and the Social Service League, whose activities were directed towards the betterment of the condition of the working classes. But these Societies were not composed of workers themselves.

The year 1918 may be said to be a landmark in the history of the Indian Trade Union movement, for from that year onwards there has been a more or less steady growth of trade unions despite the inevitable fluctuations in their prosperity. The economic circumstances of the time must be regarded as the dominant factor contributing to the establishment of trade unionism in India. In the two years following 1918, the epidemic of industrial strife assumed serious proportions and reached a climax towards the close of the year 1920. The number of labour unions also increased very rapidly and unions were formed of workers in all possible industries and occupations. Most of these Unions were, however, merely Strike Committees brought into existence either before or after particular strikes in order either to engineer or to conduct them. These Committees were either dissolved as soon as their purpose was served or remained dormant until another strike in the trade broke out. Most of the remaining Unions formed during the period 1918-20 were unstable and nearly 75 per cent of them died an early death in the following year. There was a definite check to the progress of the trade union movement in India during the next two or three years. But although individual Unions collapsed as rapidly as they were formed the movement itself showed signs of some permanence and vitality.

Perhaps the most important factor which retarded the growth in the movement immediately following the successes which met the earlier formations or Strike Committees which they really were, was the definitely hostile attitude of the employers to all combinations of their employees. It was not until the passage of the Indian Trade Unions Act which made it morally obligatory on employers to recognise those Unions of their employees which had registered under the Act, that a change in the angle of vision was noticeable.

Nature of leadership—The Indian Trade Union movement, in its early beginnings, was essentially an economic one, and to regard labour unions as being engineered solely by politicians as the result of their propaganda is to misread the origin of this movement. The Indian workman is predominantly illiterate and has even now few leaders from his own class to whom he can turn for guidance. In consequence, trade unions in India have been led by middle class men, especially professional lawyers and others, who have not perhaps in all cases made a distinction between economic and political considerations. In the words of Mr A. R. Burnett-Hurst, "social workers did not take the initiative" but "allowed the lawyer-politician class to capture and control these bodies". Many of the so-called leaders of Indian Labour who were drawn from the lawyer-politician class often exploited the ignorance and credulity of the labour force for their own material advantage, or for the propagation of their pet political doctrine, in addition to looking after the welfare of the labourers. There were, however, several notable exceptions. Leaders like Mr N. M. Joshi, Dewan Chaman Lal, the Rev C. F. Andrews, Mr M. K. Gandhi, Mr V. V. Giri, Mr. B. Shiva Rao, Mr. R. R. Bakhale, M.L.C.,

Mr. Syed Munawar, M.L.C., and Miss Anasuya Sarabhai endeavoured to create Unions for the benefit of the workers and for the general improvement in the conditions of life and work of the labouring classes. During the last few years, however, the principles of communism were disseminated amongst the masses of India by the members of the Workers and Peasants Party which was an agent in India of the Communist International. The Communists took advantage of the economic unrest prevalent in the country early in the year 1928 and usurped the leadership of the working classes within a short period of time and were able to assume control over the executives of the principal textile and railway unions in Bombay, Madras and Bengal. They captivated the minds of the workers by painting the existing conditions as black as possible and contrasting them with a supreme state of wealth and happiness which is promised under the regime of a dictatorship of a workers proletariat. The discontent amongst the workers over conditions of work was aggravated by the incessant preachings of revolutionary doctrines. The credulity of the Indian labourer has been of great advantage to these emissaries of revolution in creating in him a class hatred against the employers and also in instilling in his mind an abhorrence for the Government established by law in the country. These agitators, occupying positions of vantage, instigated several disastrous strikes in pursuance of purely political ends often with a callous disregard of the subsequent sufferings and losses inflicted on their ignorant and hapless dupes. But during the years 1929 and 1930 the workers began to lose their faith even in these Communist leaders after the failure of the prolonged general strike of the year 1929 in the majority of cotton mills in Bombay City. The sanity and sobriety of moderate leadership have no great attraction for the large majority of the labourers. The moderate leaders have, however, been fighting their battles for leadership with the extremist revolutionaries, and were for a time successful in keeping the latter under control. Most Communist organisations in India were, however, declared illegal in 1934, their officers were seized and their funds confiscated.

Progress of Trade Unions since 1918—The trade union movement spread to various industries and occupations in India during the years following the Armistice, but a number of them passed out of existence very soon after they were started. The more stable Unions were of clerks, railway workers, postal employees, seamen and textile workers in Ahmedabad. The peculiar feature of the trade union movement in India is that it did not in the early stages of its progress make much headway in the more important manufacturing industries and this constituted a weak point in the movement whereas in other countries, the clerical employees organised themselves on the model of the industrial workers long after the latter had well organised themselves in strong Unions, in India the former have come up if not first, at least simultaneously with industrial unions and have established themselves more permanently.

The following figures illustrate the progress of the Trade Union Movement in the Bombay Presidency —

Year.	No of Unions.	No of Members	Year.	No of Unions	No of Members.
1922	22	51,472	1929	99	106,748
1923	19	46,037	1930	93	128,393
1924	36	52,227	1931	97	115,657
1925	38	49,318	1932	100	111,526
1926	56	74,875	1933	105	113,469
1927	72	87,340	1934	105	114,824
1928	94	198,072			

The distribution of the membership as at 1st September 1934 by classes of industries was as follows —

Class of Industry.	No of Unions.	Membership.	Percentage of membership to total
Textiles	15	41,182	35.87
Railways (including railway workshops)	9	22,444	19.55
Seamen	3	28,228	24.58
Posts and Telegraphs	35	8,424	7.34
Municipal	7	2,693	2.34
Miscellaneous	36	11,853	10.32
Total	105	114,824	100.00

There are in addition two federations of Postal Unions, one of Railway Employees' Unions and a fourth which is a Central Union governing a number of individual Unions of textile workers in Ahmedabad. (For the constitution, membership and other particulars regarding these organisations, reference may be made to the issues of the *Bombay Labour Gazette*.) The Central Labour Board and the Bombay Trades Council which had been included in the list of Federations in the Bombay Presidency are now defunct.

The Punjab has no heavy concentration of industrial labour and consequently the extent of organisation among both employers and employed is up to the present little. There is, however, a vague striving among the employed towards co-operation and combination especially for the purpose of demanding better remuneration and considering the question of resorting to direct action for enforcing their demands on their employers. No Communist influence has been noticeable in the Punjab where industrial disputes have been stated to have occurred as a result of the normal antagonism between employers and employed. The only large employers of labour in the Punjab are the N.-W. Railway Administration, and two out of the 30 registered Unions are of the employees of the various departments of the N.-W. Railway and cover, in all, about 17,500 members.

In the United Provinces, the number of Associations of workers is rather small, compared to its industrial importance. Some of the

Associations formed during the general upheaval following the War and especially during the days of Non-Co-operation have since died or become moribund. Organised labour forms a very small proportion of the total. Organisation of labour outside Cawnpore is almost non-existent and even in Cawnpore only about 10 per cent of the labour is organised. There has been a growing interest of labour in trade unionism which appears to have the prospect of a rapid development in the future.

The Central Provinces and Berar have eleven registered trade unions. The classes of workers who have been embraced by the Trade movement in this part of Indian are (1) Textile workers, (2) Press employees, (3) Scavengers, (4) Motor drivers, (5) Railway workers, (6) Postal employees, (7) Bidi makers and (8) Clerks. Trade unionism is stated to be yet in its infancy in this Province and the Labour Unions appear to have done little to improve the conditions under which their members work.

The trade union movement in Madras received a setback in 1921-22 as a result of the failure of the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the Unions were dormant and the only Union which showed signs of activity was the M. and S. M. Railway Workshop Employees' Union, Perambur. The trade union activities were revived in 1923-24 and the following Unions became once more active:—(1) The Madras Labour Union, (2) The Madras Tramwaymen's

Union, (3) The Corporation Scavengers' Union, (4) The S. I. Railway Employees' Union and (5) The Coimbatore Labour Union. The Madras Harbour Port Trust Workmen's Union was revived in 1925-26. A section of the workmen of the Buckingham and Carnatic Mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees' Union, as a rival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Factory Labour Union, Aruvankadus came into prominence during 1926-27. Unions were newly formed for the employees of the Public Works Department workshops and the Government Central Press, Madras, while the Diocesan Press Employees' Union which had remained dormant was revived. The labourers working in the cotton ginning and pressing factories in Tiruppur, Coimbatore District, started a Union for their benefit. Most of the Unions included in their programme a demand for separate representation for Labour in the Legislative Council. The Oil Workers' Union and certain other Unions came into prominence only when there was an impending labour dispute. There were twenty nine registered Trade Unions in the Madras Presidency at the end of March 1934.

Railways—Labour Unions are, or have been, operation on ten of the Class I railways, on some of which as many as three or more operate at the same time. Most of them are registered trade unions and the majority have secured some measure of recognition from the respective railway administrations. Many railway trade unions came into existence during the period 1918-1921 but several of them were short-lived. Those unions which have managed to survive are actively looking after the interests of their members and show signs of improved organisation and usefulness especially in those where union committees are not dominated by persons with a communistic bent of mind. A noteworthy feature is that there is an increasing tendency in many railway unions to look for office bearers and leaders from amongst members who are actually engaged in railway work. There can be no doubt that within the last few years, the appointment of establishment and employment officers and special attention to welfare of railway labour have been due largely to trade union propaganda.

The following is a list of such All-India Federations of Trade Unions or All-India associations of workers for which some information is available.

The All India Railwaymen's Federation—Although not a registered body under the Indian Trade Unions Act, this Federation has been taking an active part in collective bargaining with railway authorities. Having affiliated to it about twelve unions of men working on all but two of Class I railways and with a membership of nearly 1,00,000, it has been able to exercise considerable influence with the Railway Board and arrangements have been made for half yearly conferences with the Board for the discussion of matters affecting wages and conditions of service of railway employees as a whole. The Federation is taking continuous interest in bringing railway employees closer together and securing greater

unity in the trade union movement in the country. At the last annual convention the Federation devoted special attention to the question of reinstatement of retrenched staff, wage-cut, the proposed statutory Railway Board, etc.

The National Union of Railwaymen of India, Burma and Bombay—This Union was started by the Amalgamated Society of Railway servants of India and Burma which came into existence as a sequel to the Great Indian Peninsula Railway Guards' strike in 1897. It was at first registered under the Indian Companies Act, but after the Indian Trade Unions Act came into being, it altered its name, redrafted its constitution and registered as a Trade Union. It has a membership of about 4,575. It provides for its members various voluntary and other benefits such as death sickness, unemployment and life insurance benefits. It is one of the few unions in India which maintains a political fund.

The All-India and Burmah Covenanted Non-Gazetted Railway Services Association—This Association, whose membership is limited to covenanted Europeans employed as foremen in railway workshops in India, was started in October 1926 with the object of securing for its members the benefits of the Lee Commission's recommendations. It submitted a memorial to the Viceroy on this question in November 1926. It has a membership of about 300 employees scattered all over India and it originally had its Head Office in Bombay. The Association registered with the Registrar of Trade Unions, Bombay Presidency in March 1928, but transferred its Head Office to Punjab in 1929 and again to Madras during the year 1932-33.

The All-India Trade Union Congress—This organisation was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual Labour Unions in India which till then remained inchoate and were unable to take concerted action and (2) to recommend workers delegates to the International Labour Conferences. When the Government of India had to select a Labour representative to attend the Washington Conference in 1919, there was no representative body of labour in India to be consulted and they therefore appointed Mr. N. M. Joshi as the Workers' Delegate. In order, therefore, that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All-India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920. Eight hundred delegates from different parts of India were present and sixty Unions were affiliated and 42 others expressed their sympathy with the Congress. It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour. Its presidents and secretaries have all been politicians first and labour leaders next, with the exception of a few persons like Mr. N. M. Joshi. The Congress appointed itself a permanent body to meet once a year. It had a definite constitution, an elected Executive to carry on its work, and Provincial

respective provinces. The main object of the Congress was "to co-ordinate the activities of all the labour organisations in all the provinces in India and generally to further the interests of Indian labour in matters economic, social and political."

The second Session of the Congress was held in 1921 at Jharia under the Presidentship of Mr Joseph Baptista. The third Session was held at Lahore in 1923 with Mr C. R. Das as President. The fourth Session held at Calcutta in 1924 was also presided over by Mr C. R. Das. Out of the 43 resolutions passed at this Session some dealt with the recruitment of Seamen and their eligibility for securing compensation under the Workmen's Compensation Act. The fifth Session was held in Bombay in 1925 with Mr. Dhundiraj R. Thengdi of Nagpur in the chair. Mr V. V. Giri of Berhampur was the President of the sixth Session held in Madras in 1926. Delhi was the centre where the seventh Conference of the Congress was held in 1927 and the President was Rai Sahab Chandrika Prasad Dewan Chaman Lal, M. L. A., was the President of the Cawnpore Session of the Congress held in 1927. The ninth Session was held in 1928 at Jharia with Mr M. Daud in the chair. It is significant that at this Conference Pandit Jawaharlal Nehru moved a resolution protesting against imperialism.

The tenth assembly of the Trade Union Congress which met at Nagpur in 1929 under the presidentship of Pandit Jawaharlal Nehru will remain as the most important landmark in the history of organised labour in India. It marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by Communist Agents in India resulting in a split between the genuine trade union leadership on the one hand and the votaries of communism on the other. The fundamental issue upon which the split in the Trade Union movement occurred was whether the labour movement in India shall be inspired and conducted for the betterment of the industrial workers or whether it shall be utilised as a means to promote and bring about revolution in the country. The proceedings at the Session made it impossible for the rival forces to carry on any longer under a common organisation and the Executive of the Congress was captured by the revolutionaries, and resolutions for the boycott of the Royal Commission on Indian Labour, affiliation of the Congress to the League against Imperialism, the appointment of the Workers Welfare League, a Communist organisation in England, as Agents of the Congress for Great Britain and the boycott of the International Labour Conferences at Geneva were passed both by the Executive Committee and the open session of the Congress. The moderate leaders of labour, including Messrs N. M. Joshi, V. V. Giri, B. Shiva Rao, K. R. Bahale and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of the "All-India Trades Union Federation" in order to co-ordinate the activities of non-communist Trade Unions in India. Endeavours made to draw the seceders back into the fold of the All-India Trade Union Congress have not met with any success. The Labour Unions in Ahmedabad

which draw their inspiration mainly from Mr M. K. Gandhi and are the best organised and most successful trade unions in India have not during the sixteen years of the Trade Union movement in India shown any desire to become affiliated to the Congress.

The eleventh Session of the Trade Union Congress, held in Calcutta in July 1931, led to further disintegration in the ranks of labour and once again the Communists from Bombay were responsible. The Girmikamgar Union had split into two parts, both bitterly opposed to each other. One led by Mr. S. V. Deshpande, General Secretary of the Trade Union Congress and the other by Mr. G. H. Kandalkar, President of the G. K. U. and a Vice-President of the Congress and both groups claimed to be the Girmikamgar Union and therefore entitled to vote at the Congress. The President, Mr. S. C. Bose, a Congress politician, decided in favour of Mr. Kandalkar whereupon Mr. Deshpande and the representatives of a few other unions broke away from the Congress with the result that this organisation which should guide and control the Trade Union movement in India is a useless and effete body with no influence and a trifling membership.

The twelfth Session of the Congress was held at Madras on 10th and 11th September 1932 under the presidentship of Mr. J. N. Mitra. The report of the General Secretary stated that twelve new Unions from Madras affiliated themselves to the Congress and that the membership of the Congress covered Unions with more than a lakh of organised workers. The Conference adopted resolutions demanding the immediate and unconditional release of all the political prisoners including the Meerut undertrials, condemning leaders like Messrs Jamnadas M. Mehta, V. V. Giri and N. M. Joshi for postponing a general strike on railways, and adopting the platform of unity formulated by the Bombay Girmikamgar Union which included class struggle as one of its main planks.

The thirteenth Session opened at Cawnpore on 23rd December 1933. Mr. G. H. Kandalkar of the Bombay Girmikamgar Union presided. The president declared that the Trade Union Congress would participate in the political movement only on condition that key industries like Railways and Banks were nationalised and their control transferred to councils of workers. There was a free fight between the votaries of the Indian National Congress which is a purely political body, and labour leaders and a pandemonium resulted. Several resolutions were passed at this session one of which authorised the Bombay Girmikamgar Union to take steps to organise an All-India Textile Workers' Conference in Bombay to consider the question of wage cuts in the textile industry and concert measures to defend the cause of the workers. Pandit Hariharanath Shastri of Cawnpore was elected President for 1934.

The National Trades Union Federation — The Indian Trades Union Federation which was formed in 1929 by moderate leaders of labour like Mr. N. M. Joshi and others after the split in the Nagpur session of the All-India Trade Union Congress, held its first annual session at

Madras on July 16 and 17, 1932, with Mr. V. V. Giri as President. The Federation claimed the allegiance of 40 unions in various parts of the country including Native States and a total membership of 78,000. The Conference adopted the provisional constitution of the Federation framed by the Committee of management and also considered the question of trade union unity.

Almost from the time of the unfortunate split which occurred at Nagpur in 1929, the necessity of bringing about trade union unity has been felt in almost every quarter. Efforts have been made since 1930 to bring the different groups together informally and to try to find a reasonable basis of agreement. Some Bombay unions formed a 'platform of unity' the main planks of which were (1) that the Trade Union is an organ of class struggle involving purely direct action, (2) that the Trade Union Congress should not be affiliated to the International Federation of Trade Unions, Amsterdam, and (3) that delegates should not be sent to the International Labour Conferences. In these efforts the railway unions which had remained aloof from the two rival national organisations took very great interest and the All-India Railwaymen's Federation convened in Bombay a representative conference in May 1931 when a committee was appointed for the purpose of considering and reporting upon the best methods of bringing about unity in the ranks of Indian labour. The platform of unity referred to was particularly examined by this committee whose suggestions for amendments were not approved by the extremist labour leaders belonging to the All-India Trade Union Congress. The All-India Trade Union Federation at its first session held in Madras however welcomed the efforts made by the Trade Union Unity Conference held under the auspices of the All-India Railwaymen's Federation and authorised its working committee to co-operate with other unions in facilitating the reconciliation of differing points of view. A special session of the All-India Trades Union Federation was held at Calcutta in April 1933 for the purpose of considering the question of Trade Union unity amongst other subjects, and a resolution was passed authorising the General Council to negotiate with the Provisional Committee of the National Federation of Labour (a new national trade union organisation formed by certain leaders of labour) on the question of trade union unity with a view to bringing about amalgamation between the two organisations on a fair and equitable basis. As a result of these negotiations, the National Trades Union Federation came into existence on and from 10th May 1933 in place of the All-India Trades Union Federation and the National Federation of Labour.

The main objects of this Federation are : (a) to establish a socialist State in India, (b) to socialise and nationalise the means of production, distribution and exchange as far as possible, (c) to ameliorate the economic and social conditions of the working classes, and (d) to support and actively participate in the struggle for India's political freedom from the point of view of the working classes by all legitimate, peaceful and democratic methods such as legis-

lation, negotiation, propaganda, etc., and, in the last resort, by strikes and similar other methods. Each affiliated union had to pay to the Federation an annual fee of Rs. 20 for 2,000 members and below, Rs. 10 for every additional 1,000 members or less upto 10,000 and Rs. 5 for every additional 1,000 members or less above 10,000.

The first session of the National Trades Union Federation was held in Bombay on the 24th to 26th Dec. 1933 with Mr. Mrinal Kanti Bose, the President of the Federation, in the chair. The number of unions affiliated to the Federation was reported at 50 and the total membership of individual members at 1,37,000. It was resolved to organise an All-India Textile Labour Federation to resist the employers' attacks on the workers in the textile industry, and to provisionally affiliate the National Trades Union Federation with the International Federation of Trade Unions for a period of two years in the first instance.

There was a split in the Federation at its first session held in Bombay. The representatives of several Bengal Unions walked out of the conference on the 26th December 1933 in consequence of differences of opinion between them and Mr. N. M. Joshi and held a meeting on the same day under the presidency of Mr. Abdul Ghani and resolved to form an All-India Federation of labour with the name and style of the *All-India Trades Union Federation* with headquarters at Calcutta. Mr. M. Daud, M.A., Bar-at-Law, was elected President. It was proposed to draft a constitution and place it for adoption before the next session to be convened at an early date. Six unions, all situated in Bengal, with a total membership of 15,000 promised affiliation to the new body.

There are, in addition, the following All-India Associations in existence :—

(1) The All-India Postal and B. M. S. Association, (2) The All-India Postmen's and Lower-Grade Staff Union, (3) The All-India Telegraph Union, (4) The All-India Post and Telegraph Administrative Offices Staff Association, (5) The All-India (Government Employees' Federation, (6) The All-India Currency Association, (7) The Central Body Military Accounts Association and (8) The National Federation of Textile Labour in India.

Trade Union Legislation

In 1920 a Company owning a mill whose workers were on strike brought a suit against the leader of the local labour union which was conducting the strike and others, seeking to restrain them from inducing the plaintiff's workmen to break their contracts, and suing for damages for their actions in this respect. The Madras High Court to whom the suit was referred gave their decision granting an *interim* injunction restraining the defendants from inciting the plaintiffs' employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that, in the absence of legislation, even legitimate trade union activity was attended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March

1921, Government were committed to take steps as soon as practicable to introduce such legislation as might be necessary for the registration and protection of Trade Unions. The Government of India, accordingly, formulated certain tentative proposals and circulated them for eliciting public opinion. The opinions expressed were by no means unanimous,—some considered the proposed legislation premature, while some others realised that legislation was necessary but at the same time considered Trade Unions as a pernicious and dangerous growth which should be rigidly controlled, and others again urged that sufficient protection should be granted to them. In August 1924, the Government of India circulated a draft Bill for opinion. The Bill conferred certain privileges only on registered Trade Unions and left the question of registration at the option of Trade Unions themselves. Provision was also made to ensure that the funds of a registered Trade Union are not expended on causes in which the bulk of the members have little interest. A regular audit of the funds was proposed to be made compulsory and the manner in which the executive should be composed was also provided for.

A number of amendments were made by the Select Committee and in the Legislative Assembly. A clause permitting registered Trade Unions to maintain funds for political purposes was added. The provision was on the model of the British Law on the subject and those members who contracted out of the liability to subscribe were not to be compelled to contribute to the Political Fund nor did failure to contribute involve any disability or disadvantage except in so far as the control and management of the Political Fund was concerned. The Bill was passed on the 8th February and received the assent of the Governor-General on the 25th March 1926. The Indian Trade Unions Act came into effect from the 1st June 1927.

Mr. N. M. Joshi introduced in the Legislative Assembly on the 9th February, 1928, a Bill to amend Section 43 of the Indian Penal Code in order to extend to the officers and members of unregistered Trade Unions the protection afforded by Section 17 of the Indian Trade Unions Act, 1926, which lays down that no officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120B of the Indian Penal Code, in respect of any agreement made between the members for the purposes of furthering any such object of the Trade Union as is specified in Section 15, unless the agreement is an agreement to commit an offence. The Assembly, however, threw out the Bill.

A Bill was introduced in the Legislative Assembly on the 4th September 1928 with a view to amending Section 11 of the Indian Trade Unions Act, 1926. It was pointed out in the Statement of Objects and Reasons that the existing section 11 of the Act admitted of doubt in two respects namely (1) It did not indicate clearly whether the first appeal lay to the judge appointed for the area within which the Registrar's office is situated or to the judge appointed for the area within which the head office of the trade union is situated. The amendment was intended to make it clear that the

latter is the competent court. (2) It did not indicate clearly what judge might be appointed to hear appeals in the Presidency towns and in Rangoon. The amendment was designed to make it clear that in such areas the appeal lies to the High Court and there is no second appeal. The opportunity was also taken to define clearly the powers of the High Court in second appeals. The Bill was passed and received the assent of the Governor-General on 25th September 1928.

Working of the Act—The Act has now been in operation for nearly eight years. All-India Statistics on the working of the Act for the year ending 31st March 1933 published in August 1934 show that there were 170 registered trade unions in British Provinces in the whole of India during the year ending March 1933 as compared with 131 registered unions during the year ending 31st March 1932. The distribution of the registered Trade unions together with the figures for total membership for all unions which submitted returns is as follows:—

Provinces.	Total No. of Unions registered.	Total memberships of registered Unions.
Ajmer-Merwara ..	2	34
Bengal . .	31	71,860
Bihar and Orissa	4	2,397
Bombay . .	44	64,169
Burma . . .	1	115
Central Provinces	11	7,305
Delhi . .	10	11,749
Madras . .	34	48,034
Punjab	27	21,863
United Provinces	6	9,823
Total	170	237,369

Only a few associations of employers have yet applied for registration. No Trade Union was registered in the provinces of Assam, Baluchistan, and Coorg up to the end of March 1933.

The registration of Trade Unions is not compulsory and although there is an increasing resort to registration there are still a large number of Unions which apparently regard the benefits of registration as an insufficient return for the obligations imposed on registered Trade Unions by the Act. Some progress, as a whole, was however visible in the trade union movement in India. Not only has the membership of the Unions increased but their financial position is also satisfactory. Organisation among women-workers in India continues to be slow. The figures for female membership

of registered Trade Unions in successive years were as follows —

Year.	Membership.
1927-28 .. .	1,166
1928-29 . . .	3,842
1929-30 .. .	3,209
1930-31 . . .	3,151
1931-32 .. .	3,454
1932-33 . . .	5,090

The figure for 1932-33 represents about 2 per cent of the total membership of registered trade Unions.

Royal Commission's Recommendations.—With regard to Trade Unions, the Labour Commission recommended that every employers' organisation should set up a special committee for the purpose of giving continuous consideration to the improvement of the well being and efficiency of the workers in establishments controlled by its members and that "recognition" of a Union should mean that the Union has the right to negotiate with the employer in respect of matters affecting either the common or individual interest of its members.

The fact that a Union exists only of a minority of employees or the existence of rival Unions are not sufficient grounds for refusing recognition. With regard to the internal administration of Trade Unions the Commission recommended that Union leaders should endeavour to give as many members as possible some share in the work of the Union and that Trade Union organisers should endeavour to find suitable men within the Union to act as officials and should train them for the position.

With regard to the Trade Unions Act, the Commission recommended that it should be re-examined during the year 1934 and that all limitations imposed on the activities of registered Unions and their officers should be reconsidered so as to ensure that the conditions attached to registration are not such as to prevent any well-conducted *bona fide* Union from applying for registration. Section 22 of the Act should be amended so as to provide that ordinarily not less than two-thirds of the officers of a registered Trade Union shall be actually employed or engaged in an industry with which the Union is concerned. The Government of India in their third Report on the action taken on the Commission's recommendations state that these recommendations have been "noted for consideration in due course."

INDUSTRIAL DISPUTES.

The weapon of the "strike" in industry first came into prominence in India during the period immediately following the close of the War when the majority of the strikes as shown in the introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living. The epidemic of industrial strikes which characterised the period 1919-20 reached a climax in the winter of 1921. During this period strikes took place purely from economic causes and most of them ended successfully from the view-point of the workers, after a short struggle. After this period, however,

they tended to be more prolonged and less successful and, partly owing to political causes, there were a number of fairly serious disputes in public utility services. In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation.

Extent of Disputes.—All-India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Department of Industries and Labour.

The following tables show the number of disputes which occurred during the nine years 1925-33 in each province and in each class of industry respectively. —

Provinces.	No. of disputes in

The peak in respect of the number of industrial disputes (203) was reached in the year 1928. More than 50 per cent. of these disputes occurred in the Bombay Presidency while only about 30 per cent. occurred in Bengal. In none of the

other provinces was there less than an average for at least one dispute per month during that year. The industry which was hit hardest was the cotton and woollen mill industry in which no less than 110 disputes took place during the year.

In 1933, 164,938 work people were involved were lost.

in the 140 disputes and 2,168,961 working days

CONCILIATION AND ARBITRATION MACHINERY.

Prior to the passing of the Trade Disputes Act as an All-India measure early in the year 1920, there was, with the exception of a conciliation panel in Bengal, which will be dealt with lower down, no official machinery for conciliation and arbitration in industrial disputes in India. The Employers' and Workmen's (Disputes) Act which was passed in 1880 to make provision for the speedy termination of certain disputes between workmen engaged in railway and other public works and their employers and which was extended, in case of the Bombay Presidency, to the districts of Ahmednagar, Broach, Ahmedabad, Kaira, Poona, Sholapur, Surat and Thana in 1880 and 1861 and to Sind in 1873 dealt with individuals and did not provide any machinery for the settlement of disputes in other trades or industries. No records are available to show the extent to which this Act was made use of in India. The Act was repealed in March 1932. The only provinces in which *ad hoc* Committees have been appointed during the past fifteen years either to enquire into the question of providing machinery for the settlement of disputes or to deal with specific strikes are the Bengal and the Bombay Presidencies.

Bombay Presidency.—The first Committee to be appointed in the Bombay Presidency was the Industrial Disputes Committee appointed on the 18th November 1921 with Sir Stanley Reed as Chairman "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes." This Committee made several recommendations with regard to the standardization of wages, trade unions, the attitude employers should adopt towards

Unions of their workers and the recognition of Unions, Works Committees, Welfare Work Co-operative Societies, Housing of Labour, etc. Their recommendations were in the nature of measures that might contribute to the prevention of industrial disputes. With regard to the methods of settlement when such disputes either develop irreconcilable differences between capital and labour or else become a menace to the community, the Committee recommended the formation of an Industrial Court of Enquiry to be followed, if necessary, by an Industrial Court of Conciliation.

In pursuance of the recommendations made by the Industrial Disputes Committee, the Government of Bombay published a Bill to provide for enquiry into and settlement of trade disputes in the *Bombay Government Gazette* in May 1924. It was intended to introduce this Bill in the Bombay Legislative Council at the Poona session in July of the same year; but, in the meanwhile the Government of India asked the Local Government not to proceed with this measure because they themselves intended to introduce similar legislation for the whole of India. This, however, was not the first occasion on which the Government of India considered the question of the advisability of introducing legislation to provide for the settlement of disputes. In 1920 they circularised all Local Governments asking their opinions as to the advisability of providing legislation on the lines of the Industrial Courts Act, 1919. The opinions obtained by provincial Governments were almost unanimous that labour was not properly organised and that therefore no useful purpose would be served by such legislation. The majority of the provincial Government adopted the same view.

Bonus Dispute Enquiry Committee.—The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod, as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connexion with the non-payment of an annual bonus for the year 1923 by the Bombay mills.

The findings of the Committee were :—

- (1) That the mill workers had not established any enforceable claim, customary, legal, or equitable, to the annual payment of a bonus; and
- (2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus.

Bombay Strike Enquiry Committee.—The third *ad hoc* Committee to be appointed in the Bombay Presidency was the Bombay Strike Enquiry Committee under the Chairmanship of Sir Charles Fawcett, Judge of the Bombay High Court, in connection with the general strike of the cotton mill workers in Bombay city of the year 1923 in pursuance of the agreement arrived at between the Bombay Millowners' Association and the Joint Strike Committee at a conference held under the Chairmanship of the Hon. Sir Ghulam Hussain Hidayatullah, General Member of the Government of Bombay, on the 4th October 1923.

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929.

Some of the conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows :—

- (1) The proposals of the Millowners' Association (a) for standardization of wages, duties and numbers of operatives in a mill and (b) for Standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable.
- (2) While there was justification for the Association's proposal to make a cut of $7\frac{1}{2}$ per cent. in weavers' wages, there were reasonable objections to be urged against its adoption in the present circumstances and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardization of wages.
- (3) That part of the standardization scheme which is called the "Rational" or "Efficiency" system and which aims at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable.
- (4) With regard to the Seventeen Demands submitted by the Joint Strike Committee some of the demands which were considered to be fair and reasonable were—

- (a) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations.
 - (b) That the Millowners' Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.
 - (c) The rates of new varieties shall be fixed by the Millowners' Association in consultation with the representatives of the Workers' organisations.
 - (d) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers.
 - (e) That there should be no victimisation of men who had taken part in the strike or any Union activities.
- Most of the above were eventually conceded by the Millowners' Association.
- (5) The following demands were held to be unfair and unreasonable—
 - (a) The wages of those workers whose average monthly wage is less than Rs. 30 should be raised substantially
 - (b) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean machinery daily should be discontinued.
 - (6) The recommendations of the Committee for alleviating unemployment consequent on the introduction of efficiency methods of work were as follows :—
 - (a) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff, and help them as far as possible to get suitable employment either in some other mill or in some other industry.
 - (b) The Millowners' Association should consider the advisability of a scheme for the payment of a gratuity to a worker, which may amount to say, four weeks or six weeks' wages, according to his length of service payable in suitable cases to discharged employees who may need help during the waiting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the Millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested.

- (7) The Trade Unions should combine to arrange for the assistance of an expert technical adviser in dealing with disputes arising under the Standardisation Scheme
- (8) In view of the fact that several matters required adjustment in connection with the scheme for wage standardisation after it had been brought into operation and with a view to avoiding strikes and lockouts, machinery was provided by "Mediation Rules" agreed to by both sides for setting up joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange for their settlement.

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year 1929 and the consequent disruption of labour, it was not possible for the Bombay Millowners' Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representatives of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union, of which Mr. N. M. Joshi, M. L. A., is the President had barely 400 members. The recognition accorded by the Bombay Millowners' Association to the Bombay Girni Kamgar Union which claimed a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Inquiry Committee. The Association has been giving anxious consideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances. In a circular letter dated the 8th January 1930 addressed by the Association to all the mills affiliated to it, they issued instructions that all mills should take immediate steps where by complaints and grievances of the workers may be attended to by the management concerned at once. For this purpose complaint boxes were to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or suggestions for improvement of conditions of work. The mills have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated to improve the relations between the employers and the employed are under consideration. The Association have also devised measures for joint discussions between managers of mills and the Association on general questions relating to the internal administration of the mills.

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1929. After a prolonged enquiry into the causes of and the conduct of this strike which lasted for nearly

four months, the Pearson Court of Enquiry came to the unanimous conclusion that the whole of the blame for the calling and the continuation of the strike rested with the Bombay Girni Kamgar Union. The Report of the Court was published on the 16th Sept and its moral effect was so great that the union called off the strike unconditionally on the next day.

Perhaps the most comprehensive enquiry undertaken in India into wages and conditions of labour was the Departmental Enquiry conducted by the Commissioner of Labour (Mr. J. L. Gennings, C.B.E., Barrister-at-Law) and the Assistant Commissioner of Labour (Mr. S. R. Deshpande B.Litt. Oxon) of the Government of Bombay into Wage Cuts and Unemployment in the Cotton Textile Industry in the Bombay Presidency in 1934. The Assistant Commissioner of Labour and the Labour Officer at Ahmedabad together with statistical assistants of the Labour office visited every cotton Mills in the Presidency and procured full information on wages and on the terms of reference which are reproduced below with the Departmental findings—

1. The extent of the reduction in wages of work people employed in the cotton Mills in the Bombay Presidency since 1st January 1926.

Findings—Wages in Bombay City were lower by 21 per cent in April 1934 as compared with July 1926, and in Sholapur reductions amounted to 17 per cent. Wages in Ahmedabad had risen between five to six per cent during the same period.

2. Whether the reductions have been uniform in the cotton Mills at each centre of the industry.

Findings—The reduction in Sholapur was uniform in all Mills but as the Bombay Millowners' Association permitted its members to take independent action as they pleased the extent of the cuts varied widely as between Mill and Mill.

3. Whether the cost of living of the workmen classes has fallen during this period and to what extent.

Findings—Cost of living has fallen in all centres. Taking July 1926 as 100 it fell by 29 points in Bombay City in April 1934. In Ahmedabad the fall in December 1933 as compared with August 1926 was 31 per cent and in Sholapur there was a fall of 28 per cent between February 1927 and December 1933.

4. What has been the average rise or fall in real wages during this period in the various centres of the industry.

Findings—Bombay, April 1934 showed per cent higher, Ahmedabad 54 per cent higher and in Sholapur 15 per cent higher.

- 5 Where wage reductions have been effected or are contemplated, the reasons, therefore.

Finding—The reason most generally given was trade depression. Other reasons varied with the centres. In Bombay it was stated that it was necessary to reduce the cost of production, and labour cost were those most capable of reduction as the fall in the cost of living would enable the workers to maintain the standard of life they had in 1926 even after wages were reduced. As regards Ahmedabad there was no general reduction of wages at the time but such a reduction was contemplated owing to diminished profits and the wage reductions in other centres. In one centre wages were reduced owing to the probable coming into operation of the 51 hour week.

- 6 The extent to which Rationalisation for example, efficiency schemes have been introduced in the Cotton Mills of the Bombay Presidency and the effects which such schemes have had upon wages and the conditions of work of the operatives.

Findings—That method of rationalisation which takes the form of asking operatives to mind more machines than formerly has made the greatest progress in Bombay (iv). In Ahmedabad rationalisation has been particularly directed towards improving the efficiency and types of machines used. The effect of rationalisation on earnings varied from Mill to Mill. In the few cases where rationalisation had not been accompanied by wage cuts, the workers were getting about 50 per cent more than they did before rationalisation was introduced, where it was accompanied by wage cuts the workers were not getting any more. The extra rates for minding more machines being neutralised by reductions in wages. The effects of rationalisation on the conditions of work have been beneficial because the workers were either working a shorter day or their work had been rendered easier. In Bombay a form of rationalisation is to ask a weaver to mind four looms instead of two. In Ahmedabad the system had not been adopted but double-side working in the frame Department was developing. Where operatives are minding more machines than formerly. The workers have usually been given 35 to 60 per cent more wages in ring spinning and 50 to 75 per cent more on the speed frame. But some benefit from the increased efficiency of the plant had been passed on to some workers in the form of higher earnings on those machines. There has been very little rationalisation in Mills outside Bombay and Ahmedabad.

- 7 What is the extent of unemployment in the cotton Mill industry and what are its causes.

Findings.—For lack of any agency official or non-official for collecting statistics of unemployment it was very difficult to formulate an answer to this question. 28,000 workers had lost their employment in cotton Mills in Bombay City. (The opening of closed Mills and the employment of workers on night shift had, however, more than absorbed this number by the end of the year). In Ahmedabad 26,551 more operatives were employed than in 1926 and in Sholapur the number employed was more or less stationary.

Few Government reports have received a more universal or widespread welcome in India and the report of the Departmental enquiry formed the subject of leaders and articles in all sections of the Press in India five weeks after its publication. The most important result of the Report was the passing by the Government of Bombay of a Trade Disputes (Conciliation) Act appointing the Commissioner of Labour as ex-officio Chief Conciliator and the appointment of a senior Member of the Indian Civil Service (Mr. W. B. Gilligan) as a Labour Officer to look after the interests of Cotton Mill workers in Bombay City, to represent their grievances to their employers and to procure redress of such grievances whenever and wherever possible.

A development of the greatest possible importance in the field of industrial Conciliation and arbitration in India occurred early this year when the Commissioner of Labour of the Government of Bombay offered his services as Conciliator to the Western India Match Co. during a dispute which occurred during January 1935 between the Company and its workmen at their Ambernath factory over a question connected mainly with reductions in wages. Mr. I. F. Jennings, C.B.E., Commissioner of Labour, and Mr. S. R. Deshpande, Assistant Commissioner of Labour were able to secure an agreement between the two parties on the basis of which work was resumed after a strike lasting for a month. Subsequent to restarting work there was a further disagreement between the employers and the workers on the new piece rates and these were referred to the Commissioner of Labour for arbitration.

Bengal—Several special Committees were appointed by the Government of Bengal during the period of intense industrial unrest during the years 1920-21.

(1) As the result of a strike of taxi-drivers and professional drivers of private cars in Calcutta which was caused by objections to certain rules, particularly (a) a new rule requiring medical examination of applicants for professional driver's license, and (b) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the existing licensing regulations and the control of taxicabs generally. The strike lasted from the 12th to the 20th January 1921, and ceased as a result of the institution of the inquiry. The Committee made a number of proposals for amendments in the existing regulations. These proposals were ultimately accepted and brought into effect on the 12th October 1921.

(2) As the result of a strike of drivers and conductors of Calcutta and Howrah tramways, which lasted from the 27th January to the 24th February 1921, Government appointed a Committee of Enquiry after the resumption of work by the strikers on the 8th March 1921. The men resumed work towards the end of February on condition (a) that the Calcutta Tramways Company would investigate their grievances and announce their decision within a week, and (b) that if the men were dissatisfied with the Company's decision, Government would appoint a Committee of Enquiry. There was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations. Some, however, of the Directors of the Company did not accept the terms. Another strike of the tramway employees of a much more protracted character broke out in 1922. It lasted from 20th December 1922 to 27th January 1923. No Committee of Enquiry was appointed, although the representatives of the men raised several points which arose from the previous inquiry. Work was resumed unconditionally.

(3) During a strike on the light railway of Messrs. Martin and Company in the 24 Parganas and Howrah which lasted from the 15th June to the 2nd July 1921, a special Conciliation Board was constituted by Government by a special resolution at the joint request of the employers and the employees concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howrah-Amta and Howrah-Sheakhala lines. Works Committees were established soon after the Board's report was published, but they failed to function owing to the men's indifference.

(4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 18th June 1921. The main recommendations of the Committee were—

- (a) the establishment of joint works committees in industrial concerns;
- (b) non-intervention of Government in private industrial disputes, which it was considered, should be settled by voluntary conciliation;
- (c) the constitution by Government of a conciliation panel to deal with disputes in public utility services; and
- (d) the appointment by Government of special conciliation bodies in the case of private industrial disputes, if both parties desired outside intervention.

As the result of the recommendations of this Committee, a conciliation panel was constituted under Government resolution dated the 29th August 1921. The panel contained thirty names, and was composed on a representative basis, leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every year till 1929, when it was superseded by the Trade Disputes Act. Several applications for Government intervention were received during the period of the panel's existence but in no case did Government consider that intervention was justified.

The Government of Bengal agreed with the Committee's view that there was no reason why voluntary conciliation boards, wisely constituted, should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a deadlock, and a solution of the disputes could only be found in the intervention of outsiders. The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intervene in such disputes either directly or indirectly, but if both parties express a desire that their differences should be investigated by an impartial authority, the Governor in Council should be prepared to establish a conciliation board to deal with the matter, or to take such other action as might be suitable in the circumstances of the case.

TRADE DISPUTES LEGISLATION.

The history of the various proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes" has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circularising a draft Bill as an All-India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent.

Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Meeting of the Associated Chambers of Commerce of India and Ceylon, at Calcutta, said: "The question of providing means of conciliation of trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trade Union Bill has become law." The Trade Unions Act was passed in the Legislative Assembly in March 1926 and was brought into operation with effect from the 1st June 1927.

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly with a motion for circulation on the 1st

September 1928. The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924. The main part of the Bill falls into three parts. Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation and settlement of trade disputes. This part of the Bill was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that, whereas the British Act sets up a Standing Industrial Court, the Conciliation Boards which the Bill proposed to establish were intended to be appointed *ad hoc* like the Courts of Inquiry, in order to deal with particular disputes. The object of Courts of Inquiry which would ordinarily be composed of persons having no direct interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conciliation which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of the dispute. Provisions were made so as to enable both Courts of Inquiry and Boards of Conciliation to enforce the attendance of witnesses and the production of documents. Neither party would be under any obligation to accept the finding of the Court or the advice of the Board; and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed, reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute.

The second part of the Bill consisted of clause 15 which related to public utility services. In accordance with the definition of "Public Utility Services" in clause 2 of the Bill, Clause 15 would be applicable to such railway services as would be notified by the Governor-General in Council. The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons abetting such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grievances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act, in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain special provisions relating to illegal strikes and lockouts. These clauses followed closely the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927. They were to be applicable only in the case of the strikes and lockouts which satisfied both of two conditions: in the first place, the strike or lockout must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged; and, in the second place, the strike or lockout must be designed to coerce Govern-

ment either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lockout would become illegal. Persons furthering the strike or lockout were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act, while persons refusing to take part in it would be protected from Trade Union disabilities to which they might otherwise be subjected.

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion. Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the general strikes in the cotton mills of Bombay City of the years 1928 and 1929 and the rioting in Bombay in the year 1929, should also be covered. The Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years. In connection with the definition of the term "Public Utility Services" they were of the opinion that the wide power enabling the Government to declare any industry, business or undertaking to be a public utility service was undesirable as well as unnecessary and the provision made for this in the draft Bill was omitted. Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered. But the Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was reported for action under clause 8. At the same time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was assured that both parties were agreed as to the necessity as well as to the form which it should take. They therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons, should not include persons having an interest in the dispute or in any industry affected by it, and in this connection the Committee proposed a further definition of the term "An independent person." The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act, as to make it quite clear that every report of a Court or Board, whether final or *interim*, must be published, and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion. It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they redrafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject, however, to such conditions and restrictions as might be provided by the rules.

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example, it was pointed out that

many persons are actually employed upon a daily wage which is in practice paid monthly, also that the clause as provided would appear to penalise abstinence from work on the part of a particular individual, and further that the clause was one-sided and inflicted no penalty upon an employer who locks out his workmen. The latter point was considered as one which should certainly be met as by the nature of his employment a casual or day-to-day labourer must be entitled to cease work at any moment and be similarly liable to dismissal and it was agreed that he should therefore be excluded altogether from the operation of this clause. The Committee adopted a suggestion made by the Government of Bombay which made it clear that the cessation of work must be in the nature of a strike as defined in the Bill and it was provided that in order to render it a penal offence the strike must be in breach of a definite contract between the employer and the workmen. The committee added a collateral provision penalising an employer for locking out his workmen in breach of any contract. The Committee adopted the clause in connection with illegal strikes but with some amendments which, in their opinion, would restrict its scope without materially impairing its effectiveness. In sub-clause 2 of this section they made it clear that, for the application of money to be illegal it must not merely tend to further or support the strike, but have the direct effect of so doing. This was intended to exclude a case in which money is spent upon the relief of the dependants of strikers. A further sub-clause, borrowed from a similar provision from the English Act of 1927 explaining the circumstances in which a group of workmen should be deemed to be within the same trade or industry was added. The penalties provided for the instigation of an illegal strike were modified. With regard to clause 20 of the draft Bill, the Committee held that there was no sufficient justification for giving an option to the Government to apply for injunctions restraining the expense of the funds of a Trade Union in connection with an illegal strike. It was considered that under clause 16 such expenditure had been declared illegal and the persons properly interested in seeing that the funds were not mis-spent are the members of the Trade Union concerned. The Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed as duly amended by them.

The Select Committee as such did not deal with the question of making provision for picketing and intimidation in their report but in a minute of dissent Sir Victor Sassoon, Bart., stated that the alteration of the law relating to picketing was one for which, in his opinion, the time was ripe. Picketing of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be altered so as to render it illegal at or near a workmen's house as under the English Law. There appeared to be some doubt as to whether legislation of this kind should take place in this Bill or by an Amending Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee it would delay the Bill. As he did not desire to delay the acceptance of the

provisions of this Bill he did not press the point which was raised by other members of the Select Committee. Sir Victor Sassoon, however, thought that suitable action should be taken by Government either when the Bill came up before the House or by bringing out an amending Bill to the Indian Penal Code to deal with this most important and necessary point. The action taken by the Government of Bombay in connection with the passing of an Intimidation Act has been dealt with in the chapter on Industrial Disputes.

The Bill as amended by the Select Committee was passed by the Legislative Assembly on the 8th April 1929 without any change and received the assent of the Governor-General on the 12th April 1929. The Act was due to expire early in 1934 but by virtue of an amending Act it has been placed permanently on the Statute Book.

During the period of nearly six years for which the Act has been in operation, it has only been made use of on four occasions: once by the Government of Bombay when they appointed a Court of Enquiry in the year 1929 to enquire into the general strike in Cotton Mills in Bombay City in that year, twice by the Government of India who appointed a Board of Conciliation in 1930 in connection with a dispute in the Bombay, Baroda and Central India Railway which arose over the question of the transfer of a number of workmen from the Railways' workshops in Bombay to the new workshops which they were starting in Dohad, and another Court of Enquiry in 1931 to enquire into and report on the grievances of the large numbers of workers who were retrenched on all Indian Railways during that year, and once by the Government of Burma.

Royal Commission's Recommendations.—The Royal Commission on Indian labour were of opinion that some statutory machinery would be permanently required to deal with trade disputes and that it will be necessary to consider the form which such machinery should take before the Trade Disputes' Act expired in 1931. They recommended that the possibility of establishing permanent courts in place of *ad hoc* tribunals under the Act should be examined and also that the question of providing means for the impartial examination of disputes in public utility services should be considered. The Commission also recommended that Section 13 of the Trade Disputes' Act should be amended so as to provide that no prosecution or suit shall be maintainable on account of any breach of the section or any damage caused thereby, except with the previous sanction of the Government which appointed the tribunal. Act XIX of 1932, giving effect to this recommendation was passed by the Indian Legislature in September 1932.

In May 1933, the Government of India issued a circular letter to all Provincial Governments inviting opinions, after consultation with the interests concerned as to (1) whether the Indian Trade Disputes Act, 1929, should be converted into a permanent measure, and (2) what amendments, if any, should be made in the Act. The Government of India were provisionally disposed to accept the Royal Commission's recommendation to include "Inland Water Services" within

the definition of a "Public Utility Service" but not "Tramway Services" because the latter generally have no monopoly in transport in the areas in which they run. Opinions were also specifically invited on the following five questions (1) whether any statutory provision should be made in the Act for the appointment of Conciliation Officers, (2) whether a permanent Industrial Court on the lines of the British Industrial Court should be framed in each Province, (3) whether strikes or lockouts should be prohibited during the pendency of a Court of Enquiry or a Board of Conciliation, (4) whether awards of Boards of Conciliation should be made binding on both employers and the employed, and (5) whether picketing either by itself or when it is resorted to while a strike has been referred to a Court or Board should be made illegal. The Government of India were also disposed to accept the recommendation made by the Commission to omit the words "between an employer and any of his workmen" in Section 3 of the Act because as this Section stands at present it requires notices of the appointment of a tribunal appointed under the Act to be sent to every individual employer affected by a dispute. The Government of India requested all local governments to send them their replies by 1st November 1933. At the moment of going to press the Legislative Assembly passed a bill introduced by the Government of India to convey the Trade Disputes Act into a permanent measure. As regards the various amendments in the provisions of the Act it is understood that the Government of India propose to introduce another bill in the Assembly sometime later. Indian labour in general has been very badly let down by the communist agitators who dominated labour platforms all over the country in 1928 and 1929 and to-day there are few labour leaders in India who can command respect and adherence from both the employers and the employed. Great labour leaders like Mr. N. M. Joshi, M.L.A., have, during the last two or three years, been engaged in fighting the cause of labour either before the Round Table Conferences in connexion with India's political future or in the Legislative Assembly in connexion with Bills and proposals for new labour legislation.

With regard to the action which should be taken by Provincial Governments the Commission recommended that every Provincial Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement. The Commissioner of Labour in Madras, the Director of Industries in the Punjab, the Director of Statistics and Labour Commissioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as Conciliation Officers.

The most notable achievement in the field of industrial conciliation in India was the passing of the Bombay Trade Disputes Conciliation Act, 1934. This Act is, in the first instance, to apply to the textile industry. It provides for the appointment of the Commissioner of Labour as *ex-officio* Chief Conciliator and also for the appointment of a Labour Officer, special Con-

ciliators and Assistant Conciliators. If the Chief Conciliator or any Conciliator appointed under the Act (a) in any area for which a Labour Officer is appointed, on receipt of an application or report from such Labour Officer, or (b) elsewhere, on receipt of an application from either or both parties to a dispute or upon his own knowledge or information is satisfied that a trade dispute exists or is apprehended, he may cause notice to be given to the parties to the dispute to appear before him and he is empowered to proceed to bring the two parties together with a view to conciliation. The Labour Officer duties are "to watch the interests of workmen with a view to promote harmonious relations between employer and workmen and to take step to represent the grievances of workmen to employers for the purpose of obtaining their redress. Both the Labour Officer and the Conciliator have been given powers of entering premises and calling for documents relevant to the subject-matter of the enquiry. The Act came into immediate effect and Mr. W. B. Lilligton, I.C.S., was appointed Labour Officer with effect from the 1st September 1934. In accordance with an undertaking given to Government by the Millowners' Association, Bombay, for the appointment of the Association's Labour Officer, the Association appointed Mr. C. A. Dalal B.Sc. (London), as their Labour Officer to maintain a uniform policy for discussion and to represent Mill Managements in proceedings with the Government Labour Officer and the Chief Conciliator. During the short period for which the Act has been in force remarkable results have been achieved and there is today an almost complete absence of industrial strife in the cotton mill industry in Bombay City. This will be evidenced by the figures in the following table which show the number of disputes, number of workers involved in these disputes and the number of working days lost in textile Mills in Bombay City for each half year from the beginning of 1930 to the end of 1934.

Table showing the number of disputes in the Textile Industry in Bombay City for five years, 1930 to 1934

Period.	No of Disputes	No of work people involved	Working days lost
1930			
January to June	7	10,454	67,925
July to Dec	20	25,953	86,715
1931			
January to June	7	10,106	78,751
July to Dec	7	11,819	130,204
1932			
January to June	4	1,890	22,290
July to Dec	7	4,855	145,058
1933			
January to June	15	16,145	149,778
July to Dec	20	25,895	198,775
1934			
January to June	16	110,984	3,275,077
July to Dec	10	2,608	7,321

INDIA AND INTERNATIONAL LABOUR CONVENTIONS.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve the conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be of "special and urgent importance," but also brought into being the **International Labour Organisation** which was entrusted with the task of securing, as far as practicable, the observance of these principles. The International Labour Conference has been discussing various questions connected with industrial, agricultural and maritime labour since 1919 and has recorded its findings in conventions and recommendations. The Conventions and Recommendations adopted by the Conference are not automatically binding on the State Members, but they have to be submitted to the Legislature of each country, and this secures the regular examination both by the Executive Governments and the Legislatures of schemes which international opinion considers necessary and desirable for the amelioration of labour conditions. During the eighteen Conferences that have been held, over forty Conventions have been adopted. Out of these the following thirteen have been ratified by India.—

1. Hours of work (1919)
2. Unemployment (1919).
3. Night work of Women (1919).
4. Night work of young persons in Industry (1919).
5. Rights of Association (Agriculture) (1921)
6. Weekly Rest in Industry (1921).
7. Minimum age of stokers and trimmers (1921).
8. Medical Examination of Young Persons employed at Sea (1921).
9. Workmen's Compensation (Diseases) (1925)
10. Equality of Treatment (Accidents) (1925).
11. Inspection of Emigrants on board ship (1926).
12. Seamen's Articles of Agreement (1926).
13. Weight of Packages transported by vessels (1920).

In addition to the Conventions dealt with above, the International Labour Conferences have also adopted numerous Recommendations.

The Seventeenth Session of the International Labour Conference held at Geneva from the 8th to 30th June 1933 adopted conventions in respect of (a) employment agencies, (b) widows and orphans' insurance and (c) invalidity and old age insurances. It also adopted Recommendations in connection with the first two subjects.

GOVERNMENT ADMINISTRATION.

During pre-Reform days Labour was not a question to which the Central or Provincial Governments in India gave the same attention as they did to such subjects as education, health or justice. After the amendment of the Indian Factories Act of 1891 in 1911, the appointment of the **Indian Industrial Commission** in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the 'creation of an unprecedented opportunity' and 'the emergence of an unprecedented need' for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included, to a certain extent, the examination of questions connected with labour as well. Previous to this date no provincial or All-India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No information was available in 1919 as to the rates of wages which were paid in industry, and, for that matter, very little information in this direction is available even to-day. Indian labour secured its first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international comity of nations. The participation by India, in the first International Labour Conference held at

Washington in the year 1919 made it necessary for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2, Rule 26) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules "regulation of mines" and "inter-provincial migration" are central subjects. A Labour Bureau was established by the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the Viceroy's Council holding the portfolio. Amongst Local Governments, the Bengal and the Madras Presidencies were the first in the field for the creation of special Labour Officers, but it was the Government of Bombay who took the lead in the field for the creation of a proper Labour Office for the collection and compilation of all kinds of statistics in connexion with prices, cost of living, wages, etc.

Bengal.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time, as circumstances permitted, he was to conduct special inquiries. He was, however, not provided with an adequate staff for the purpose. The Labour Intelligence Officer is also the Deputy Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian Trade Unions Act, 1926, he has also been appointed Registrar of Trade Unions. The Royal Commission on Indian Labour have recommended that Bengal should have a properly staffed Labour office on the same lines and with at least the same staff as the Labour office of the Government of Bombay.

Madras.

The Government of Madras appointed a Labour Commissioner in the same year, viz., 1920, to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the Office the conduct of periodic censuses into agricultural wages is, however, placed in his hands.

The Bombay Labour Office.

The real pioneer work in the field of labour information and statistics in India during the last fourteen years has been done by the Labour Office of the Government of Bombay which was established in April 1921. In the Government resolution announcing the establishment of this office the following were declared to be its functions:—

“(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters;

“(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise; and

“(3) *Legislation and other matters relating to labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws.”

When the Labour Office was first started it was placed in charge of Director of Labour, The post of the Director of Labour was, however, abolished in 1926 and the labour office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to “Commissioner of Labour and Director of Information.” With this change in designation the administrative control of the Factory and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. Under the Bombay Trade Disputes Act, 1934, the Commissioner of Labour has also been appointed ex-officio Chief Conciliator. In addition to the Commissioner there are four granted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth who is called the Labour Officer at Ahmedabad is stationed at that centre. There are also three full time Lady Investigators but these are not gazetted appointments. The Assistant Commissioners, the labour Officer and all the investigators receive conveyance allowances. The office staff contains two Statistical Assistants, three senior clerks, ten junior clerks, two stenographers, one typist, one cashier, one despatcher, one dattari and five peons in Bombay and one peon in Ahmedabad. The activities of the office comprise (1) prices and cost of living, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the *Labour Gazette*, (12) library, and (13) office organisation.

The *Labour Gazette* has been published monthly from September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour

Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodical received from Labour Ministries, International organisations and research organisations in various parts of the world.

The Labour Office has conducted several special inquiries, the results of which have either been published in the form of special reports or as special articles in the *Labour Gazette*. Among the inquiries the results of which have been published in the form of reports are three inquiries into wages and hours of labour in the Cotton Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1926, four reports of inquiries into family budgets three of which related to working class family budgets in Bombay, Ahmedabad and Sholapur and the fourth to middle class family budgets in Bombay City. The remaining reports dealt with inquiries into agricultural wages in the Bombay Presidency, an inquiry into deductions from wages or payments in respect of fines and an inquiry into middle class unemployment in the Bombay Presidency. Other special inquiries related to wages of peons and municipal workers, welfare work, rentals in Bombay and Ahmedabad, maternity cases among women operatives, methods of wage payments, creches, clerical wages in Bombay City, incidence of sickness among cotton mill operatives, infant mortality, etc. In the *Labour Gazette* statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation, prosecutions under the Indian Factories Act, and the employment situation. A new working class index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur has also been published. Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months. The present staff of the Labour Office is as follows -

Commissioner of Labour and Director of Information, Commissioner of Workmen's Compensation and Registrar of Trade Unions—Mr. J. F. Gennings, C.B.E., Bar-at-Law, J.P.

Assistant Commissioners of Labour—Mr. S. R. Deshpande, B.Litt. (Oxon), Mr. N. A. Mehrban B.A., F.R.S. and Mr. S. V. Joshi, B.A. (Cambr.) Mr. Joshi is also assistant to the Registrar of Trade Unions, Bombay Presidency.

Labour Officer at Ahmedabad—Mr. A. S. Iyengar, B.A., LL.B.

Lady Investigators.—Mrs K. Wagh, Miss G. Pimpalkhare and Miss S. Dabholkar. (These are non-gazetted appointments.)

The Commissioner of Labour and Director of Information has six offices under his charge (1) The Labour Office, (2) the Information Office, (3) the Office of the Commissioner for Workmen's Compensation, (4) the office of the Registrar of Trade Unions, (5) The office of the Chief Inspector of Factories, and (6) the office of the Chief Inspector of Bolders. In the case of the Office of the Registrar of Trade Unions one Asst. Commissioner of Labour has been appointed as Assistant to the Registrar of Trade Unions and the office work is done by a Statistical Assistant and a junior clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925, but it was transferred to the General Department and is now under the control of the Political and Reforms Department.

Central Provinces.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Revenue Department deals with mines. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions. The Factory Office is under the general supervision of the Director of Industries. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board. But the Board acts purely in an advisory capacity.

Other Provinces.

In Burma a Labour Statistics Bureau with a Special Officer in charge was set up in 1926. This Bureau has conducted an extensive investigation into the standard and cost of living of the working classes in Rangoon, the Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour. In the United Provinces almost all departments of the Local Government deal with labour questions. Labour as such is with the Home Member, electricity is with the Finance Member, the factory staff is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boller Inspection is under the Public Works Department. The Registrar of Co-operative Societies of the United Provinces has been appointed Ex-officio Registrar of Trade Unions in the Province. In Assam the main question connected with labour is that concerning the recruitment of labour for the tea plantations from other provinces. As inter-provincial migration is a Central subject, the Local Government are not very actively interested in the special consideration of other labour questions.

Representation on Legislatures.—The Government of India nominates one member for labour interests in the Legislative Assembly. Since the last reforms were brought into opera-

tion Mr. N. M. Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly in the Bombay Presidency the Local Government had provided one seat for labour, and Mr. S. K. Bole was nominated as the labour member in the first two Councils after the reforms. In 1927 the Local Government increased the number of seats for labour to three but the principle of nomination was maintained. The three persons representing labour interests in the Bombay Legislative Council at present are Messrs S. K. Bole, Syed Munawar and R. R. Bakhale. In the Central Provinces, Mr. R. W. Fuley, a Nagpur pleader, has been nominated as a representative of urban factory labour. In Bengal there have been two nominated members to represent labour interests since the introduction of the reforms. The Assam Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in the present Assam Legislative Council.

Relation between Central and Local Governments.—It has already been stated above that under the Devolution Rules, factories, settlement of labour disputes and welfare of labour are reserved subjects. These subjects are, however, subject to central legislation. The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the Governor-General in Council. The actual administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the Local Governments to labour measures on which their opinions have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the legislature in two ways in the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly, these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All-India Acts.

Effect of differences in Law in Indian States and British India.—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Recommendations of the Royal Commission.—The most important recommendation made by the Royal Commission on Indian Labour in connexion with Government administration of matters connected with labour is for the setting up of an Industrial Council which would enable representatives of employees of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy. It is suggested that the Council should meet annually and its President should be elected at each annual session. The Secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals, (2) to promote a spirit of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters, (3) to advise the Central and Provincial Governments on the framing of rules and regulations; and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research. If labour legislation is made a Central subject in the new constitution of India, the Royal Commission recommend that the authority finally responsible for such legislation must be the Central Legislature. If labour legislation is to be decentralised, some co-ordinating body will be necessary. The decisions of the Council could not be given mandatory power, but in certain circumstances it might be made obligatory for Provincial Governments within a specified time to submit proposals for legislation to their respective legislatures for a decision as to their adoption or rejection.

The Commission recommended that Labour Commissioners should be appointed both for the Central and in all the Local Governments except Assam. Labour Commissioners should be selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour and should act as conciliation officers. Where there is danger of establishments being transferred to Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining States. The Commission also recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration, and that if federal legislation is not practicable, efforts should be directed to securing that, as early as possible, the whole of India participates in making progress in labour matters. For States in which there is appreciable industrial development, the Industrial Council should offer a suitable channel for co-operation. On the 7th March 1935 Mr. P. N. Saprú moved a resolution in the Council of State urging the establishment of the Industrial Council on the lines suggested by the Whitley Commission. Mr. D. E. Mitchell speaking on behalf of Government expressed sympathy with the resolution. He did not deny that the creation of such an Industrial Council would be of very great value but there was no great hurry for it.

He quoted the Commission and said they were not for its immediate establishment. The situation had considerably altered since the recommendation had been made in 1931 and there was a possibility under the new constitution that Labour would be decentralised. In that case there was the danger that legislature made under autonomous provinces would come into conflict with the Centre. In view of this he thought that the creation of such a Council at this state was not desirable. The Resolution on being put to the vote was negatived by 22 votes against seven for.

With regard to the question of representation of labour on the legislatures the Royal Commission recommended that if special constituencies are to remain a feature of the Indian constitution labour should be given adequate representation in the Central and Provincial legislatures. The method which is most likely to be effective in securing the best representatives of labour is that of election by registered trade unions. A special tribunal should be set up in each province to determine before election the weight which should be given to

each registered trade union. The question was examined by the Indian Franchise Committee and so far as the Provincial Councils are concerned the communal award of His Majesty's Government has given effect to the Labour Commission's recommendation. The Franchise Committee recommended a combination of trade union constituencies and special constituencies and this has been, more or less, adopted in the Government of India Bill under discussion in the House of Commons as we go to Press.

In the Government of India Bill the following subject may be legislated for concurrently both by the federal Legislature and the Provincial Legislatures.—

- (1) Factories; regulation of the working of Mines, but not including mineral development;
- (2) Welfare of Labour, provident funds, employers' liability and workmen's compensation,
- (3) Trade Unions, industrial and labour disputes.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials or "chits," and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (*Gesindeordnung*) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word "servant" means and includes head and under-servants, female servants, cooks, coachmen, housekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept

by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record

the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions.

Sea Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line and the Lloyd Triestino. The Natal Line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and the

West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N.Y.K., Australian Commonwealth, and Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 13 days *via* Genoa or Venice. The following are the fares which are convertible at approximately current rates of exchange:—

Peninsular and Oriental S. N. Co.

FARES FROM BOMBAY OR KARACHI.		1st Saloon.				2nd Saloon.	
		A	B	C	D.	A.	B.

By the **British India S. N. Co.** Cabin class fares from Madras are:—

Cabin class from £38 to 49 Single and £67 to 86 Return to Marseilles and £40 to £52 single and £70 to 91 Return to London.

By the **Anchor Line** fares to Liverpool from Bombay or Karachi are:—1st saloon Rs. 800 single and Rs. 1,400 return. To Marseilles—Rs. 747 and (return from Liverpool) Rs. 1,354.

By Ellerman's "**City**" and "**Hall**" Lines fares from Bombay or Karachi to Liverpool, are:—

Cabin class (Minimum) Marseilles Single Rs. 453, Return Rs. 787, Liverpool Single Rs. 493, Return Rs. 867. Calcutta to London.

Cabin class, Single Rs. 560 minimum, Return Rs. 987 minimum.

By **Bibby Line** fares from Rangoon to London

1st saloon single Rs. 910, return Rs. 1,560.

Rangoon to Marseilles, 1st saloon single Rs. 840. Rangoon to Marseilles, 1st saloon return Rs. 1,470.

The **Bibby Line** fares from Colombo are as follows:—

Colombo Marseilles single Rs. 710, return Rs. 1,240. Colombo London single Rs. 760, return Rs. 1,335.

The **Bibby Line** steamers carry 1st class passengers only.

By **Henderson Line** fares from Rangoon to Liverpool, 1st saloon are—single Rs. 775, return (available for 4 months) Rs. 1,150, (available for 2 years) Rs. 1,375.

By **Lloyd Triestino Line** fares from Bombay to Brindisi, Venice or Trieste are:—

1st class £65, 2nd class £45, 2nd Economic £30. Return rates available for 2 years at one and three-fourth fares. 100 days return tickets 1st class, £86 and 2nd class, £63, 2nd Economic £42.

Sailings from Bombay Twice Monthly.

INDIAN TRAIN SERVICE.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow:—

CIVIL AVIATION.

The development of internal aviation services in India was first essayed by Lord (then Sir George) Lloyd, during his Governorship of Bombay (1918-23). Lord Lloyd succeeded in securing the inauguration of a postal mail service between Karachi and Bombay. This was carried in R.A.F. machines. The use of these aeroplanes complicated the matter from the outset. The service was not warmly supported by the public. The effort failed.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general

development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India, stimulated both Government and public opinion. India had become a party to the International Air Convention and under this was under a moral obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances had already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt-Col. F C Sheldermine, O.B.E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for some time strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of civil aviation in India was only a matter of time and their great desire was to prevent it following in the wake of the mercantile marine and the commissioned ranks of the army, in which Indians came to the fore under modern conditions only in time to be faced with competition by Britishers who were first in the field. The upshot of this agitation was an arrangement by which young Indians might be sent to England for training with a view to their future employment in the Civil Aviation Department as aerodrome officers, inspectors of aircraft and engines, etc. Eight lads were dispatched for the opening of this system. Others followed and results have been successful. These men are not trained primarily as commercial pilots, but a development of their training, if they show special aptitude and desire to adopt a pilot's career, is always in view. This is a wise precaution and some of them take pilot's certificates. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and a period of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course lasts for two years and three months, during which time the men receive scholarships amounting to £240 per annum. A condition of eligibility for these scholarships is that applicants must possess a B.Sc. degree in engineering or physics.

In all, 8 Indians were trained as Government Scholars and are at present employed in the Civil Aviation Directorate. Of these, 6 are employed as Aerodrome Officers at Karachi, Allahabad, New Delhi, Calcutta, Akyab and Rangoon, the remaining two as Assistant Aircraft Inspectors at Karachi and Calcutta. In 1933, a further batch of 5 ground Engineers was sent to England for training in advance aeronautical engineering. One was to undergo a course in oxy-acetylene welding and of the remainder two were to be trained in aircraft and two in engine manufacture. The course is for a period of 2½ years.

Internal Air Services—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was, on 30th December 1929, extended to New Delhi, mails from and for Europe being carried to and from each week. This conveyance of mails between New Delhi and Karachi was performed under a

special arrangement, the chief point of which was that the service was conducted by the Postal Department of the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mails to and from Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment, pending the development of a permanent scheme.

Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spadework carried out by Col Sheldermine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air-service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways, Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Government-owned services.

The arrival of acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England-Australia air service. A private company Indian Trans-Continental Airways, Ltd., was formed with rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways Ltd. 51 p.c., Indian National Airways Ltd. 25 p.c., and the Government of India 24 p.c. This Company operates jointly

with Imperial Airways, a weekly service from Karachi to Singapore, where it now connects with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways Ltd was established largely through the efforts of Mr. R. E. Grant Gevan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They run a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India, they have also instituted a weekly service from Lahore to Karachi, to link with Imperial Airways London-Karachi services.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd, under a ten year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi service. It now includes Hyderabad in its schedule. An extension of the service to Colombo is contemplated.

In Burma, Irrawaddy Flotilla and Airways Ltd. operate a weekly service between Rangoon and Mandalay and hope to extend it to Moulmein and Tavoy.

From the beginning of the new year, Imperial Airways London-Karachi service, and with it, the Trans-India service up to Calcutta and the feeder services, Karachi-Lahore and Karachi-Bombay-Madras, have been operated twice weekly.

Instruction in Aviation—Instruction in Aviation is given in India through Clubs founded for the purpose. There are nine of these. Above them is the Aero Club of India and Burma, Secretary, Flight Lieut. G.V. Carrey, which exercises control and general co-ordination of activities under the Director of Civil Aviation in India. The nine instructional clubs are the Delhi, U.P., Bengal, Madras and Bombay Flying Clubs, Karachi Aero Club, Northern India Flying Club, Lahore, Jodhpur and Kathiawar Flying Club. (A Punjab Flying Club at Lahore, lost its three aeroplanes in crashes and had to wind up. Its place has been taken by the Northern India Flying Club). A Club has recently been formed in Rangoon known as the Burma Flying Club. Indian National Airways, Ltd have also established a Flying School in Rangoon for the training of pupils in aviation. The institution of two other clubs in the C.P. and Hyderabad Deccan respectively is in prospect.

The Club movement dates from March 1927, when, as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India was formed, composed of about 40 members of the Assembly. Its first meeting

was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

Legislation—Air navigation in British India was till recently governed by the Indian Aircraft Act, 1911. It was found to be very much out of date in the face of the rapid development of aviation and in August 1934 the British Indian Central Legislature created the Indian Aircraft Act, 1934, replacing the old Act, giving powers to them Government of India to make rules to meet modern developments and to enable them to implement the provisions of the International convention for the Regulation of Aerial Navigation, 1919, to which India is a party. During the same session, legislation (the Indian Carriage by Air Act) defining the law of Carriage by air in India was also carried out.

Indian Air Races—The Government of India, in December, 1927, received from Sir Victor Sassoon a letter saying that subject to a grant of Rs 30,000 to the Aero Club for the year 1928-29 and a grant of Rs 20,000 to each club, formed, he would bear any deficit between the Club's income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. These grants commenced as from the 1st April 1928, and were to continue for two years. Agreements were entered into between the Secretary of State and the provincial clubs, laying down the conditions of financial assistance. Most aeroplanes manufactured by the De Havilland Aircraft Co. were selected as the training machines. Eight of these arrived in December 1928, and training with them began in January 1929.

The first Indian air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willington) and the Countess of Willington, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December, 1934, to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the

Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now". The funds annually available to pay for the race are limited and as soon as the length of the race and the number of stops are increased the cost of organisation

rapidly increases. The running of the first race cost Rs. 5,600 and that of the second Rs. 5,354.

The Club are now endeavouring to organise a further race on a progressively large scale in the early part of 1936.

Director, Civil Aviation.—Mr. F. Tymms, C.I.B., M.C.

Deputy Director, Civil Aviation.—Mr. A. T. E. Eadon.

Chief Inspector of Aircraft.—Mr. A. S. Lane, M.S.E.

Engineer Officer.—Capt. A. G. Wyatt, R.E.

Engineer Officer.—Mr. H. J. Paterson, I.S.E.

THE SUEZ CANAL.

Transits through the Suez Canal during the year 1934 amounted to 5,663, and receipts amounted to 856,410,000 francs, compared with 5,423 transits and 852,280,000 francs in 1933. Thus, in spite of the 4½ per cent reduction in dues which came into force on April 1 last, receipts were over 4,000,000 francs higher. But for a sharp fall in the last two months of the year, the receipts for 1934 would have been very much better, for at the end of October the gain over the corresponding period of the previous year was nearly 16,000,000 francs. The subsequent setback was largely the result of a severe contraction in demand in Eastern freight markets during the last quarter of the year. Recently there has been a slight recovery in the East which, if continued, will favourably affect the canal traffic. The December figures, which are announced with the results for the year, were 466 transits and 70,560,000 francs receipts, compared with 488 transits and 77,340,000 francs in December, 1933.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft., making it 30 ft. English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception

of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches; in June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 35 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the protection of the entry to the Canal were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need of any apprehension as to its future.

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high; the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd-Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravansera.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Mahratta campaigns; they are but one—the Mahrattas—of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharma, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse races, of absorbing subjects for study and

observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give, the tiger in the forest, the great mahseer in many rivers, the wily snipe on the pheels, the strong winged duck, the jinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmans and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the **Taj Mahal**. Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanille. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wondrous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthral him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, Kashmir Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Purana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at Udaipur is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babur, the founder

of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi *via* Bombay an interesting return trip can be made *via* Benares and Calcutta. Many visitors, however, enter India *via* Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchenjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the

Dawn on its capital. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya.

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreath in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archaeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythical hero of the Ramayana, the epic poem of the Hindus: but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Shiva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tipu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in

the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India: Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co, Messrs. Jeena & Co, Bombay, etc, and the Publicity Officers of all the more important Railways as well as the Manager, Indian Railways Publicity Bureau, 57, Haymarket, London, and the Resident

Manager, Indian Railways Publicity Bureau, "Delhi House", 38 East 57th Street, New York, will work out tours to suit the convenience of individual parties. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass, Kashmir and Mysore, but there are innumerable other places almost as well known containing sights which cannot be equalled in other parts.

of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarapura nearby are well worth a visit.

A selection of itineraries for long and short tours in India and Burma is given below. These show what can be seen in certain periods of time, but they can be varied to suit individual parties or taken in the reverse direction.

Tour No 1.—4 weeks—Bombay, Udaipur, Jaipur, Peshawar, Lahore, Amritsar, Delhi, Agra, Cawnpore, Lucknow, Benares, Darjeeling and Calcutta.

Alternatives (a) Puri and Konarak in place of Darjeeling

(b) Gwalior, Sanchi, Ellora and Ajanta Caves in place of Jaipur and Udaipur

	1st	2nd	Servants 3rd
Total fare (approximate) on the basis of return tickets at 1½ single fares Calcutta—Darjeeling and Delhi—Peshawar	{ Rs 361-8 £ 27 \$ 120	{ 186-4 14 62	{ 65 12 5 20

Tour No 2—2 weeks—Bombay, Udaipur, Jaipur, Delhi, Agra, Gwalior, Sanchi and Bombay. Alternative Benares in place of Gwalior and Sanchi

	1st	2nd	Servants 3rd
Total fare (approximate)	{ Rs 192 £ 15 \$ 69	{ 96 7-10 34	{ 32 2-10 11

If the alternative is taken, the fares are increased by about one-quarter

Tour No 3—1 week—Delhi, Lahore, Amritsar, Peshawar and Delhi

	1st	2nd	Servants 3rd
Total fare (approximate) on basis of return tickets at 1½ single fares	{ Rs 90 £ 7 \$ 25	{ 45 3-10 13	{ 16 2 1 5 4

Tour No 4—10 days.—Bombay, Poona, Mysore, Madras, Trichinopoly, Madura and Colombo.

	1st	2nd	Servants 3rd
Total fare (approximate)	{ Rs 212 £ 16 \$ 66	{ 107 8 34	{ 39 3 12

NOTE—If extra time can be allowed at Mysore, Somnathpur, Gersoppa Falls and Ootacamund can be visited

Tour No 5—2 weeks—Colombo Madura, Madras, Mysore, Ootacamund, and Colombo

	1st	2nd	Servants 3rd
Total fare by train (approximate).	{ Rs 222 £ 20 \$ 63	{ 124 10 32	{ 45 3-10* 11

NOTE—An interesting trip can be made after leaving Ootacamund *via* Cochin where the white Jews live, along the backwaters to Alleppey and Quilon by motor launch and motor car, down to Trivandrum, the capital of Travancore, by train, and by motor car to Cape Comorin, the southernmost point of India and, back *via* Trivandrum and Madura to Colombo. This would take about seven days.

* Motor Mysore-Ooty from Rs. 75 additional per car.

Tour No. 6.—1 week —Rangoon, Mandalay, Gokteik Viaduct, Mandalay—Rangoon

	1st	2nd	Servants 3rd	Revised fare by rail
Total fare (approximate) {	Rs. 70 £ 5 \$ 25	35 3 13	12 1 4	1st ret 102-3-0 2nd „ 51-2-0 3rd „ 17-2-0

NOTE — Many interesting trips off the beaten track can be made in Burma, but special arrangements are necessary

For any visitor landing in Calcutta, it is possible to visit Benares, Agra, Delhi, Jaipur, Bombay, Mysore, Madras, Trichinopoly and Madura and still reach Colombo on the 14th day, but this entails sightseeing by day and travelling most nights and is not recommended for the ordinary visitor. A very attractive tour can, however, be worked out for a similar trip over a period of four weeks either allowing more time at the more important places or including other of the places mentioned in Tours 1 and 4 such as Darjeeling, Puri, the Khyber Pass, Lahore and Amritsar, Udaipur, etc.

Travelling in India is not expensive when the long distances travelled are taken into consideration. The first, second and Indian

servants fares are shown at the end of each tour. Hotel expenses average about Rs 15 (22/6 or 5½ dollars) per person a day except when special rates are charged during certain special periods, while a motor car for the day can be hired for Rs 25 to Rs 30 (38/6 to 45/ or 9 or 11 dollars) a day in most places, except when long distances have to be covered. Where the distances are short, tongas and two-horsed landaus can be used and the daily charges vary from Rs 3-8 to Rs 9 (5/- to 13/6 or 1½ to 3½ dollars). Guides with a good knowledge of English can be obtained from Rs. 5 to Rs. 10 (7/6 to 15/- or 2 to 4 dollars) a day.

It should be noted that the leading travel Bureaux will quote on application inclusive rates covering railway fares, hotel accommodation motor cars, guides, etc

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

AGRA.—Cecil, Laurie's Great Northern, Imperial.

SINGAPORE.—Adelphi, Europe, Raffles, Sea-View, Riviera.

PASSPORT REGULATIONS.

[Note—These instructions are intended for Presidency proper only. Residents in Sind in Sind Persons residing outside the Bombay respective Governments or Administrations.]

A.—British Subjects.

1. British Indian passports are issued only to:—(1) British subjects by birth, (2) wives and widows of such persons, (3) British subjects by naturalization and (4) British-protected persons.

Before a subject of an Indian State is granted a passport he should show that he has severed all connections with his state of origin and is permanently residing in British India or produce a certificate to show that the state has no objection to the grant of a passport.

2. The Indian Passport Regulations do not require persons to be in possession of passports for leaving India, but as practically every other country requires travellers to be in possession of passports before they are allowed to land at the port of such country, travellers are advised to obtain passports before embarkation. Members of His Majesty's Naval, Military or Air Forces or of the Royal Indian Navy travelling on duty and members of the families of such persons when travelling to the United Kingdom on military entitled passages need not have passports.

3. Passports are not required for journeys by sea from Bombay to ports in India or to Burma; nor are passports required for permanent residents of Ceylon or India, being British subjects to travel between India and Ceylon. Natives of India travelling to the Federated Malay States or the Straits Settlements do not require passports unless they propose to continue their journey onward.

4. In order to obtain a passport, an application form (showing, among other things, the reasons for the proposed journey) should be filled in by the applicant and the applicant's declaration certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notary Public resident in India. Copies of the form can be obtained from any District Magistrate, from the Commissioner of Police, Bombay, by post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay. Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs 6 in cash should be forwarded with the application form. Fees are not accepted in stamps or by cheque.

5. The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented at the Passport Office, Bombay. An applicant who forwards his application for a passport through the post may call at the Passport Office at Bombay to take delivery of it in person, but it is desired that the passport should be sent to him through

the information of residents in the Bombay should apply for passports to the Commissioner. Presidency should apply for passports to their

the post it will be sent to the local officer of the town in which the applicant resides who will hand over the passport to the applicant personally and take a receipt for it. Exceptions may, however, be made in the case of passports issued through reputable Shipping Agents or when the issuing authority is satisfied that the passport will be delivered to the holder.

6. The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 10-30 a.m. to 6 p.m. daily, except on Saturdays when it closes at 2 p.m. and on Sundays and public holidays.

7. As a passport is valid for five years, there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience will be avoided by early application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement, renewal or visa. The Passport officer cannot issue passports outside office hours and as the preparation of a passport takes time, applicants who postpone application to the last moment do so at their risk.

8. In certain circumstances, such as for instance, cases of extreme urgency, the Passport Officer is authorised to issue a travel document called an "Emergency Certificate" on being satisfied as to the nationality and the *bona fides* of the applicant. An application for an Emergency Certificate will on no account be considered, unless it is accompanied by duplicate unmounted copies of the photograph of the applicant.

Iraq.

9. Members of His Majesty's Naval, Military or Air Forces or of the Royal Indian Navy in uniform and *bona fide* Muhammadan pilgrims (Haj or Zair) holding individual pilgrim passes do not require passports for their journey to Iraq. All other travellers must be in possession of national passports and visas for Iraq. In the absence of Iraq Consular Officers in India, visas for Iraq are granted by Passport Issuing Authorities in India on behalf of the Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds—Ordinary, valid for all entries into Iraq during a period of twelve months, and Transit, valid for a single journey only, allowing for stay of not more than fifteen days in Iraq. The fee for these visas is the same as for British visas—vide paragraph 20 below. Iraq national passports are valid for return to that country without any further visa or endorsement.

Except in the case of *bona fide* tourists of ample and independent means, business representatives and employees of well established firms and persons with definite guarantee

of employment in Iraq, visas for Iraq will not be granted without the previous permission of the Iraq Government. The Passport Officer will, on request, ask for this permission by post or, if the applicant is prepared to defray the cost by cable. Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regarding the purpose of their journey.

With the exception of tourists who may remain for three months in Iraq without registration, all persons are required to obtain a "permis de séjour" from the police within fifteen days of their arrival in Iraq. No endorsement of departure is required by foreigners leaving Iraq except the nationals of those states which require that Iraqis should obtain a departure visa viz Turkey, Persia and Afghanistan. All foreigners proceeding by the Imperial Airways require a visa for Iraq on their passports and the exception mentioned in the following paragraph is not applicable to them.

10. *Arab Principalities in the Persian Gulf*—Passengers, both British and Foreign, proceeding by Eastbound aeroplane on the regular service to India do not require any endorsements or visas on their passports for any of the Arab Principalities. Similarly, passengers by Westbound do not require endorsements or visas, for any of the Arab Principalities if they are booked to proceed to Basra and places beyond. When, however, they propose to discontinue their journey at Koweit, Jahrein, Sharjah or Gwador or to break their journey at any of those places, they must comply with the ordinary passport requirements regarding endorsements and visas.

British subjects proceeding to any of the Arab Principalities require an endorsement and visa on their passports which are granted without prior reference to the authorities concerned. In the case of all foreigners the previous permission of the authorities concerned is absolutely necessary. The fee in India for British subjects for transit and non-transit visas for any of the Arab Principalities is Re 1.

Egypt.

11. In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government. The fee for these visas is the same as for British visas—vide paragraph 20 below. All visas for Egypt placed on British passports are free of charge.

The Egyptian Government have prescribed rules which regulate the admission of foreigners into Egypt. Generally except in the case of British Government officials, *bona fide* tourists of ample and independent means and representatives of commercial houses of good standing, visas for Egypt cannot be granted whether for permanent residence or for a limited period without a reference to the Egyptian Government. In applying for visas for Egypt, a form of questionnaire laid down by the Egyptian Government which can be obtained from the Passport Office at Bombay, should be filled in. In addition, an applicant for a visa should supply in writing,

full particulars as regard the nature of his business in Egypt, the reasons for the journey, the proposed duration of stay in Egypt and what means he possesses.

No transit visa for Egypt can be given unless Egypt is necessarily on the route which the traveller must follow to reach his country of destination, and provided there exists no direct route by which he can reach that country without the necessity of passing through Egyptian territory.

Holders of the new-form Egyptian passport do not require visas to return to Egypt.

Palestine.

12. Under instructions recently received from the Foreign Office, an applicant for an endorsement or visa for Palestine will be required either to deposit a sum of £80 to be refunded, if claimed within four months of the grant of the endorsement or visa, or to furnish a guarantee from a reputable bank for the same amount. Passport Control Officers have, however, been authorised to waive this requirement at their discretion. If they are satisfied that an applicant is a genuine tourist or pilgrim or a person of independent means.

The possession of a British passport endorsed for Palestine does not in itself guarantee the holder's entry into Palestine. Admission to Palestine is governed by the Immigration Ordinance, 1933. The Immigration authority may, under the Ordinance, require from travellers, a cash deposit of £60 in respect of each person arriving at a port of Palestine and seeking to enter therein as a condition of his admission into the country and as a guarantee that he will leave the country within a period of three months, or such extended period not exceeding one year, as may be authorised by the Immigration authority.

Tourists.—Holders of British passports endorsed as available for travelling to Palestine are reminded that the endorsement has been granted on the condition that it is not their intention to remain indefinitely in the country or to seek to obtain work there. Any person who ignores this condition, without permission from the Director of Immigration, is liable on conviction to not more than six months' imprisonment or to pay a fine of £100, or both penalties. He is also liable to deportation at his own expense.

A tourist may not remain in the country more than three months unless he applies for and receives during this period permission from the Director of Immigration to remain in the country as a tourist, which may be granted for an additional period of not more than nine months, or permission to settle in the country. If permission is refused, such person must leave the country immediately. If he does not do so he will be liable to the penalties mentioned above and also to deportation.

Immigrants.—All persons visiting Palestine except as tourists or in transit for another destination require to obtain in advance a permit from the Department of Immigration at Jerusalem, particulars of which must be endorsed

on the passports. A fee of Rs 1-8 is payable for an endorsement for Palestine on both British Indian passports.

Other Countries.

13 Restrictions exist on travel to various parts of the British Empire and to certain foreign countries. Among these may be mentioned Afghanistan, Australia, Canada, Fiji, Madagaskar, Mexico, Mohammerah and Abadan, New Zealand, Northern and Southern Rhodesia, Union of South Africa, South-West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries.

14 Passports for journeys to or through foreign countries require, after issue, the visa of the Consul concerned. The addresses of the foreign consulates in Bombay will be found in the appendix below. Visas are, however, not necessary for Austria, Belgium, Czechoslovakia, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemburg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland provided the names of these countries are entered on the passport by a British Passport issuing authority. Pilgrims holding pilgrim passes for Iraq are warned that should they desire to proceed to Persia they should obtain a visa on their pass from a Persian Consular Officer in India. All intending pilgrims holding pilgrim passes and proceeding to the Holy shrines in Iraq or Persia are warned that if they do not set out on their journey on or about the date specified on their passes they may be refused permission to land in Iraq or Persia.

Renewal.

15. A passport is valid for five years from the date of issue and is renewable for a further period of from one to five years from the date of expiry of its validity, at the option of the holder, but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of this period, or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required a new passport must be obtained. Application for renewal must be made in the prescribed form, copies of which may be had from any of the officers mentioned in paragraph 4 above. The fee for renewals is Re 1 for each year, or portion of a year, for which the passport is renewed.

Endorsements.

16. A passport is valid only for the country or countries endorsed on it and fresh endorsements from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may, however, be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories under British protection or mandate, not how-

ever including Palestine, for which country the passport must be specifically endorsed. The fee for endorsing the names of foreign countries on British passports is Re 1, but no fee is charged for this purpose on British Indian passports.

Marriage.

17 A lady on marriage or re-marriage requires a fresh passport.

18 In the case of a joint passport issued in favour of a husband and wife, the latter cannot travel alone on it, but should take out a fresh passport, surrendering the joint passport for cancellation of her name from it. The particulars of a wife cannot be added to her husband's existing passport. The holder of the passport should either apply for a new joint passport or his wife should apply for a separate passport in her own name.

B—Foreigners.

19. Foreigners proceeding direct to their own country, or to, or through, any other foreign country or countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom. The concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Office. The concession does not apply to India —

Austria, Belgium, Czechoslovakia, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemburg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland,

20. Foreigners who are subjects of the countries shown in the appendix below and who are travelling to British territories for which a British visa is necessary should first obtain passports endorsed for the British territory concerned from their consular representatives and should then present them to the Passport Officer for visa, together with a written statement of the reasons for the journey. British visas are of two kinds, viz., the Non-transit and Transit. The fees for these are Rs 7-0-5 and Re. 1-0-0, respectively, except in the case of nationals of States which levy higher fees, when the retaliatory scale of fees will be applied.

21 Other foreigners should apply for Emergency certificates through the Commissioner of Police, Bombay, or, where such foreigners reside in the mofussil, through the District Magistrate of the district in which they are residing. Small duplicate copies of the applicant's photograph must accompany the application. The fee for an Emergency Certificate is Rs. 1-8-0.

22. The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in, or passing through, India does not need a further visa from the authorities in India.

ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

- Afghanistan* —Amir's Bungalow, Walkeshwar Road, Malabar Hill
Austria —Closed down
Belgium —19, Cuffe Parade, Colaba
Brazil —Asian Building, Nicol Road, Ballard Estate

Uruguay.		
*Captain S. A. Paymaster	Consul	Bombay.
*Mr. J. B. Turnbull	Vice-Consul	Calcutta.
Venezuela.		
*Mr. F. Aldridge	Consul	Calcutta.

* Honorary.

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order —

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville), and the Park.

Kangra Valley.—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaulai Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmasala and Kangra. The best hotels at Dalhousie are Stiffle's Grand View and the Arramoor; and at Dharmasala the Switzes's.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can hire a houseboat and live on the River Jhelum. At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal. (7,000 ft.)—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor run. The Carlton is the principal hotel. There are also boarding houses.

Matheran. (2,500 ft.)—The nearest hill station to Bombay, ideal for walkers and any body wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahableshwar. (4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation: orchids and lilies bloom in April and May. Hotels:—Race View and Frederick.

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archaeological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu.

Murree. (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 87 miles by car. The principal hotels are the Cecil and the Viewforth.

Mussoorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 85 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand, and the Savoy.

Naini Tal. (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 6 hours longer is to take G. I. P. train to Lucknow and then change over to the metre-gauge railway. The Grand, Metropole and Royal are the best hotels.

Octacamund.—Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Octacamund is the administrative centre of the District and the seat of the Madras Government for six months of the year from April to September. Reached either by

taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam *Via* Madras and thence by hill railway to Ootacamund. The principal hotels are the Savoy and Cecil.

Pachmari (3,500 ft.)—Situated on a plateau in the Mahadeo Hills, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather hill resort. Reached by G. I. P. railway to Pipariya *Via* Jabulpore, and a two hours' motor journey. The best hotel on the Hill.

Simla (7,000 ft.)—The summer headquarters of the Government of India, is situated on several small spurs of the lower Himalayas. Towards the end of September, and in October and November Simla enjoys the best climate in the world. Reached from Bombay by taking G. I. P. or B. B. & C. I. train to Kalka and thence either by hill railway or motor. There are many good hotels and boarding houses. The leading hotels are the Cecil, Clarke, Corstorphane, Grand, Gables (at Mashobra) and Wildflower Hall (Mahasu).

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas, a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only one, Kamet (25,447 ft.) has been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlegelweil brothers, who in 1855 reached a height of 22,320 ft. on the Eastern Ibi Ganna, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and made attempts to climb Kanchenjunga, 22,700 ft. and Pauhuni, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Sir Martin (now Lord) Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakoram and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bude Peak. Mountaineering developed rapidly in the "nineties," and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the

mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first ascent of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Photias were trained for mountaineering and, with the advent of first class portage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakoram and W. W. Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad As who got within a few feet of the top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kanchenjunga, Pauhuni and Chomomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingsby also attempted Kamet at this time.

Attempts on Kanchenjunga—The first attempt on Kanchenjunga was made in 1907 but ended in disaster, Lieut. Paeche and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 25,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Kamthang Peak, 23,200 ft and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.) the highest mountain peak, though not the highest altitude ever reached by man.

Mount Everest.—A description of the attempts to climb **Mount Everest**, the highest mountain in the world, may be divided under three headings: the reconnaissance expedition of 1921; the first attempt in 1922, and the second in 1924. A still further attempt is being made at the time of writing, in April, 1933.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen. the Hon. C. G. Bruce. Capt. G. J. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,200 feet. Then a final attempt was made by G. I. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazzard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 23,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An **Everest Committee** was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr. Hugh Rutledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in its members were Mr. F. S. Smythe, leader of the successful Kamet Expedition of

1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene climbed **Kamet** with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st Camp I was established. Thereafter the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col, 23,000 ft. prolonged and arduous work. Camp IV, 22,400 ft. was not established until the middle of May after a 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col by field telephone so that messages could be received up to 2,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 25th and on May 29th Wm. Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,100 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wm. Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wm. Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slopes. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise

he marched to Everest and with a few porters succeeded in reaching 21,000 feet. He then went on alone and nothing more has since been heard of him. As he had no mountaineering experience, it is presumed he perished on the slopes of the North Col.

Aerial Expedition.—An interesting aside to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Flt. Lt. A. McIntyre second pilot and Major P. T. Etherton, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April, permitted.

An interesting mountaineering flight of which details were published in 1933 was one from Raisalpur to Gilgit and back, undertaken by the E. A. F. at Raisalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Raisalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs 20 mins. on the outward flight and in 2 hrs 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakiot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken.

The year 1932 saw a well organised expedition to **Mount Nanga Parbat**. It was conducted by Dr. Merkl of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American, Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merkl returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Frier and Sangster of the Indian Army as trans-

port officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a rout during which no fewer than nine lives were lost, Herren Merkl, Welzenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schnelder and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten one or two spent a week without food or shelter.

This is the worst Himalayan mountaineering disaster that has yet occurred.

Another expedition to the Karakoram took place in 1934 under the leadership of Dr. G. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party state it to be more than 1,000 feet higher.

In 1934 Messrs E. E. Shipton and H. W. Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of **Nanda Devi**, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs Shipton and Tilman also crossed from Badrinath to Gangotri via the Satopanth Pass and explored the head of the Gangotri glacier.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjarni, near Pablgam in Kashmir.

Several expeditions have lately been made into the Himalayas by members of the Himalayan Club, especially expeditions into Sikkim by members of its Eastern Section.

The Himalayan Club.—Was founded on 17th February 1923, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the Hon'ble Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor-General. Its membership is over 350, including three lady members and its president is General Sir Kenneth Wigram. Major K. G. McLean is Hon. Secretary.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868 when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Greve said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out,

which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina Hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislative Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Allpur Road, between the existing civil station of Delhi and The Ridge. The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings have outlasted the transitional period for which they are intended. Army Headquarters were still housed in them in the winter until the season 1929-30. They are now occupied for various purposes including the temporary accommodation of Delhi University.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,299 and of the new area 14,652, or a total of 412,951. The population of the Municipal town of Delhi

was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors after wards increased the amount the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923, estimated the total expenditure at Rs. 1,29 lakhs including Rs. 42 lakhs for loss by exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenue, and the

headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new Secretariats, of which the builders have already had to carry out the first section of the extension provided for in the architects' plans. The Member of H. E. the Viceroy's Executive Council including H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33 when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the tents in Delhi being higher than those for residences in Simla. It remains to be seen whether the consequent profit will exceed the additional general expense of keeping staff down in the heat. An early descent from Simla to New Delhi was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished

pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones, and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work is continually progressing. Government, meanwhile, instituted a scheme for sending selected artists to Europe for finishing studies to enable them the better to join in the work, and this is in operation.

Opinion of the Legislature—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried:—“This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable.”

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government “to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year.” This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H. R. H. the Duke of Connaught, on 12th February, 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariat. The building is an imposing pile circular in shape, consisting in the main of three horse-shoe-shaped Chambers for the Chamber of Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H. E. the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India Legislature began its sessions in them next day.

During 1928, official and public attention became focussed on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. The old city is now rapidly expanding in a westerly direction, i.e., towards and up the Ridge, which runs behind both cities and the spaces between the two cities are being

developed and utilised. So far the plan for a direct thoroughfare from the midst of the new city through the old city wall to the middle of the old city has not been proceeded with and consequently the magnificent thoroughfare, named Parliament Street, which was constructed for the purpose in New Delhi remains in a truncated condition. The Delhi Municipal Committee late in 1923 declined to co-operate in a completion scheme, on the ground that it would result in changes in property values in the old city to the disadvantage of many owners. The Medical Officer of Health of the old city in his latest reports gravely stresses the ill effects of its overcrowded state and in this he is borne out by the Municipality in its reports.

H. E. the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General Hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the service of both old and new cities. This would provide 250 beds and the necessary laboratories and administrative and residential quarters. No progress has yet been made with the building work on which has for financial reasons been postponed.

All India War Memorial—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931.

The Memorial takes the form of a triumphant arch spanning Kinnaird, the avenue running down the centre of the Vista. It is generally similar to the Arc de Triomphe in Paris but is simpler. The monument reaches a height of 160 feet and the inner height of the arch is 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts appears in capital letters the single word INDIA and this is flanked on each side by the initials MCM (i.e., 1900) whilst immediately below them on the left hand are the initials XIV (i.e., 14) and on the opposite side the figures XIX (i.e., 19). Above the Arch is a circular stone bowl $11\frac{1}{2}$ feet in diameter. A column of offensive chemical smoke ascends from this on ceremonial occasions and anniversaries and is illuminated by electric light reflections after dark. The memorial bears the names of British and Indian officers and N.C.O.s and men according to an inscription carried upon it and running.

Public Institutions—It was proposed during 1911 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still “under consideration.” To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential

University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundationstone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 Old Viceroyal Lodge was allocated to it for its future home.

The new city was the scene of notable inauguration ceremonies in February, 1931. The first of these was the unveiling of four "Dominion Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various

parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose. The second great ceremony was the inauguration of the War Memorial. This was performed in State by His Excellency the Viceroy in the presence of representatives of every unit of the army in India of the Royal Air Force and of a large concourse of official and other spectators. There was a large popular fête on the ground lying below the old Fort and between it and the river Jumna. Their Excellencies the Viceroy and Lady Irwin arranged a programme of festivities at The Viceroy's House. A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

City Extension.—The new city now, in the midst of its season, contains a population of approximately 70,000 the maximum number for which it was designed. Of the numerous Ruling Princes who more allotted sites for residence, very few have yet responded by building. Otherwise the available residential building space is almost covered and the time has come to consider and plan extensions of the city. The main direction for this is southward where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, Esq., authorising him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1780, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by

Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1780, and we learn on the same authority that at the request of the "Lodge in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its

being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrers in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indianman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1768. In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependence and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1768 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1768 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing

there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Decan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of Orion-in-the-West had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge of Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1823. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1838, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges

newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umara has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

- 79 Lodges Rt. Wor. Bro. Eric Studd, P.G.D., M.L.A., Dis. G. Master, Dy. D. G. M., Edward A. H., J. Hunt, C.I.E., O.B.E., I.C.S. P.G.D., Assist. D. G. M., F. W. Hockenhill, P.G.D.

Madras

- 35 Lodges Dis. G. M., Rt. Wor. Bro. G. T. Boag, C.I.E., I.C.S., P.G.D., Dy. D. G. M., Dewan Bahadur P. M. Sivagnanam Mudahar, P.G.D.

Bombay

- 51 Lodges D.G.M. Rt. Wor. Bro. W. A. C. Bromham, P.G.D.; Dy. D.G.M., R. H. Middleton.

Punjab.

- 34 Lodges Rt. W. Bro. Rev. Canon G. D. Barne, M.A., C.I.E., O.B.E., V.D., Lord Bishop of Lahore, District Grand Master; H. L. O. Garrett P.G.D. Dy. D.G.M.

Burma.

- 20 Lodges Rt. W. Bro. Dr. N. N. Parekh, P.G.D., District Grand Master, Jivanji Hormusji, C.I.E., I.S.O., P.A.G. Reg., Dy. D. G. M.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland Dr. Sir Teimulji B. Nariman, Kt., is the present incumbent of the office, and controls 78 Lodges. Under him the several districts are in charge of the following Grand Superintendents—

Lt.-Col. R. W. Castle, C. M. G., D. S. O., G. Supdt., Northern India.

G. Lindsay, G. Supdt., Central India.
Morley Williams, Supdt., Southern India.
W. G. McLean, G. Supdt., Eastern India.
F. B. Ady—Burma.

The Grand Secretary is R. W. Bro. Khan Bahadur J. C. Mistrer, J. P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, viz. English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are eleven Lodges, 6 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under—

Bengal.

- 31 Chapters, Grand Supdt. Most Ex. Comp. Eric Studd, M.L.A. (P. A. G. Soj.)

Madras.

- 19 Chapters, Grand Supdt. Most Excellent Comp. G. T. Boag, C.I.E., I.C.S.

Bombay.

- 26 Chapters, M. Ex. Comp. W. A. C. Bromham, Grand Superintendent.

Punjab

- 22 Chapters, Most. Ex. Comp. Rev. Canon G. D. Barnes, C.I.E., O.B.E., V.D., Lord Bishop of Lahore, Grand Superintendent.

Burma.

- 7 Chapters Most Ex Comp. D. N. N. Parekh, Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. A. M. Kajji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts, but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

- 24 Lodges. Rt. W. Bro. Eric Studd, P. G. M. O., District Grand Master.

Bombay.

- 18 Lodges. Rt. W. Bro. W. A. C. Bromham, P. G. D., District Grand Master.

Madras.

- 16 Lodges. Rt. Wor. Bro. George Townsend Poag, C. I. E., I. C. S., District Grand Master.

Punjab.

- 12 Lodges. Rt. W. Bro. Lt.-Col. H. L. O. Garrett, M. A., F. R. H. S., District Grand Master.

Burma.

- 5 Lodges. Rt. W. Bro. Nasirwanjee Nowtojee Parakh, M. D., District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R. A. M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, Nos. 80, 203, 207, 220, 232, 233, 298, 468, 474, 497 and 642, Bengal Dist.

R. A. Mariner, 72, 511, 662, Bombay, and 483, Jubulpore, Bombay Dist.

R. A. Mariner, 61, 81, 82 and 106, Madras Dist.

R. A. Mariner, 98, 193, 219, 279, Punjab Dist.

Secret Monitor, 14, 21, 34, 37, 40 and 42, Madras, 23, 46, 58, 60, 63, 65, 70, Bombay.

Benevolent Associations—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

H. W. Barker, P. D. G. W., (Madras), 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P. A. G. R., P. D. G. W., Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Burma.

H. Friedlander, D. G. S., M. C., Rangoon.

D. G. S., Madras.

S. T. Srinivasa Gopala Chari, P. A. G. Reg., Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, R. A. G., D. C., Freemasons' Hall, Lahore.

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangir C. Mistree, J. P., 17, Murzban Road, Bombay.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well known members as Anderson, Wood-Mason, Alcock and Annandale.

With the exception of the Director (Lieut.-Colonel R. B. Seymour Sewell, I.M.S.) all the officers are Indian. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum.

Botanical Survey.—The Botanical Survey department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of two officers for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma, of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's area of distribution in Upper India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical fact of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, physiology, ecology, and histology of plant life—the work accomplished in pure botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India.

Survey of India.—The first authoritative map of India was published by D'Anville in 1762, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough charts of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennel the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work. *Geodesy* means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of these which are carried out in India.

Precise levelling for the determination of heights.

Tidal predictions and publication of Tide Tables for forty-one ports between Suez and Singapore.

The Magnetic survey;

Observation of the direction and force of gravity;

Astronomical observations to determine latitude, longitude and time;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is concerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905 however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing however to the war and more recent retrenchments only two-thirds of the programme had been completed by 1932, in spite of a reduction of scale for the less important areas.

Although new surveys covering from thirty to sixty thousand square miles—an area comparable to that of England—are carried out every year, the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures, such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but entered from outside information.

Owing to the serious financial situation in 1931, the establishment of the department was severely cut down and its annual expenditure halved, in consequence of which the modern survey of India cannot now be completed before 1950.

The obsolescence of the present series of modern maps of India is shown in the second index map at the end of this report.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys;

Riverin, irrigation, railway and city surveys, Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers, lent in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun also carry out work for other Government departments, such as special maps, illustrations for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining a high standard of instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be imported from abroad.

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible encouragement and assistance, and the latest methods of mapping from photographs

taken from the ground are being studied experimentally.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dun.

Administration is by the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Shillong, Officer in charge, No. 6 (South India) Party, Bangalore; and Officer-in-Charge, No. 10 (Burma) Party, Maymyo.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous, meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association.—This Association, which is a much older body than the National Research Council in England, was constituted in 1911 with a sum of rupees

five lakhs (£33,000) set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that, in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly, one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the co-ordinating agency for the research activities of the All-India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of **Medical Research Workers** is drawn from all parts of India and consists of experts in their particular lines of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommendations for the programme of the following year. The Advisory Board also met in December and examined all the proposals for research work and recommended a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the "Indian Journal of Medical Research," which has a wide international circulation. The Association also publishes "Indian Medical Research Memoirs," which are supplementary to the "Journal".

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The principal inquiries are the **Malaria Survey of India**, which is a Central organisation, located at Kasauli and Karnal, plague research at the Haffkine Institute, Bombay, kala-azar by a commission in Assam, bacteriophage by Dr. Asheshov at Patna, nutritional research by Colonel McCarrison at the Pasteur Institute, Coonoor, and indigenous drugs and drug addiction by Lt.-Col. Chopra at Calcutta.

The Malaria Survey of India, which now enjoys international recognition, is constantly called upon to advise as to the best methods for malaria prevention in India. As part of the

activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the "Records of the Malaria Survey of India," of which up-to-date four numbers have been issued.

The programme for each year involves an expenditure of Rs. 10 lakhs or more and the institution of 40 or 60 investigations.

Geological Survey.—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are published without delay and every endeavour is made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel to the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams, for reservoirs, the safety of hill slopes and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems connected with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The Geological Survey also undertakes the examination and identification, without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Palaeontologia India. The Survey headquarters are in Calcutta.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Industries and Labour of the Government of India. For the efficient working of the Department a representative of the Finance Dept.—the Financial Adviser, Posts and Telegraphs—has been attached to the office of the D. G. P. A. T. The Financial Adviser not only controls the finances of the Dept but also assists the D. G. generally in examining matters containing financial implications in which the former is assisted by the Deputy Director-General Finance. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services), five (including one temporary) Asst. Deputy Director-General and one Personal Assistant to the Director-General.

For postal purposes, the Indian Empire is divided into nine circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta,

Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster or a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental offices on small pay or of extraneous agents, such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate head-quarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The Inland Tariff (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
<i>Letters.</i>			
Not exceeding half a tola	1 0	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
Exceeding half a tola but not exceeding two and a half tolas	1 3		
Every two and a half tolas or fraction thereof exceeding two and a half tolas.	1 3		
<i>Book and pattern packets</i>			
For the first five tolas or fraction thereof	0 0		
For every additional five tolas, or fraction thereof, in excess of five tolas	0 6		

Postcards.			
Single	9 pies.		
Reply	1 anna 6 pies.		
(The postage on cards of private manufacture must be prepaid in full.)			

Parcels (prepayment compulsory).
Parcels not exceeding 800 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 4
For every additional 40 tolas or part of that weight	0 4
Registration is compulsory in the case of parcels weighing over 440 tolas.	

These rates are not applicable to parcels for Portuguese India.

In the case of parcels for Ceylon a registration fee of 3 annas is chargeable on each parcel in addition to the rates shown above.

Registration fee.	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 3

Ordinary Money Order fees.	
On any sum not exceeding Rs. 10	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 upto Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable.

Telegraphic money order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary"

message. In addition to the above a supplementary fee of two annas is levied on each inland telegraphic money order.

In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary—Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.	A p
Where the value insured does not exceed Rs. 100	0 3
Where the value insured exceeds Rs. 100 but does not exceed Rs. 150	0 4
Where the value insured exceeds Rs. 150 but does not exceed Rs. 200	0 5
For every additional Rs. 100 or fraction thereof over Rs. 200 and upto Rs. 1,000	0 2
For every additional Rs. 100 or fraction thereof over Rs. 1,000	0 1
As regards Portuguese India see Foreign Tariff.	

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except as indicated below), is as follows:—

Letters.	
To Great Britain and Northern Ireland, Egypt (including the Sudan) and all British Colonies, Dominions and possessions except Palestine and Transjordan	2½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.
To other countries, colonies or places except to Ceylon and Portuguese India to which Indian inland rates apply.	3½ annas for the first ounce and 2 annas for every additional ounce or part of that weight.

For insurance of letters and parcels to Ceylon and of letters to Portuguese India—Insurance fees mentioned under “Inland Tariff”

For insurance of letters and parcels to British Somaliland, Mauritius, Seychelles or Zanzibar and parcels to Portuguese India.

Where the value insured does not exceed Rs. 180	Annas. 4½
For every additional Rs 180 or fraction thereof	4½

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £12	Annas 4½
For every additional £12 or fraction thereof	4½

Acknowledgement fee.—3 annas for each registered article.

Magnitude of business in Post Office.—

At the close of 1933-34 there were 108,200 postal officials, 23,700 post offices, and 187,200 miles of mail lines. During the year, 1,100 million articles, including 41 million registered articles were posted, stamps worth Rs. 62 5 millions were sold for postal purposes over 37 5 million money orders of the total value of Rs. 754 millions were issued, a sum of Rs 185 6 millions was collected for tradesmen and others on V. P. articles, about 3 5 million insured articles valued at 1,031 millions of rupees were handled. Customs duty, aggregating about 7 9 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs 18·7 millions were paid to Indian Military pensioners and 17,000 lbs. of quinine were sold to the public. On the 31st March 1934, there were 3,000,000 Savings Bank accounts with a total balance of Rs. 522 ½ millions and 87,000 Postal Life Insurance policies with an aggregate assurance of Rs. 165 2 millions

TELEGRAPH DEPARTMENT.

Telegraphs—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer. Telegraphs, with one Personal Assistant. For traffic work there is a Deputy Director-General, with two Assistant officers. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the

engineering work is in charge of the Postmaster General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the circles are now controlled by the Postmasters-General.

There is also a Wireless Branch attached to the Director General's office, which is in administrative control of all wireless work in the Department. The Director of Wireless is in charge of this branch and is assisted by two officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows—

	For delivery in India	
	Private and Stat	Express, Ordinary
	Rs. s.	Rs. s.
Minimum charge	1 2	0 4
Each additional word over 8	0 2	0 1

For delivery in Lhasa (Tibet).		For delivery in Ceylon.	
Private and State.		Private and State.	
Ex- press.	Ordi- nary.	Ex- press.	Ordi- nary.
Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge.	1 8 0 12	2 0 1 0	

Each additional word over 12.. 0 2 0 1 0 3 0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram	Minimum charge for an ordinary telegram.
Notification of delivery	Minimum charge for an ordinary telegram
Multiple telegrams, each 100 words or less 4 annas.
Collation	One half of the charge for an ordinary telegram of same length

Rs.

For acceptance of an Express telegram during the hours when an office is closed.	If both the offices of origin and destination are closed	2
	If only one of the offices is closed.	1
	If the telegram has to pass through a ny closed intermediate office an additional fee in respect of each such office	1

Signalling by flag or semaphore to or from ships—per telegram The usual inland charge plus a fixed fee of 8 annas.

Boat hire Amount actually necessary.

Copies of telegrams each 100 words or less 4 annas.

Press telegrams.	For delivery in India.		For delivery in Ceylon.	
	Ex- press.	Ordi- nary.	Ex- press.	Ordi- nary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

Urgent Telegrams—

Rate double of ordinary rate.

Letter Telegrams—
Minimum charge for 25 words.

Ordinary rate telegrams may be written in Code.

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration Reply Paid, etc.

Full lists published in Posts and Telegraphs Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from Offices in India or Burma transmitted to ships at sea through the coast stations mentioned in the preceding paragraph:—

	Total charge per word.	Ordinary.	Code.
		Rs. a.	Rs. a.
1) All Government or Private Radio-telegrams, excepting those mentioned in (2) to (4) below ..	0 13 0	8	8
(2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy ..	0 8 0	5	5
(3) Radio-telegrams to Spanish or Swedish ships ..	0 12 0	7½	7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in daily letter telegrams are Reply paid, Poste Re-

stante, Telegraph restante and telegraph redirection under orders of the addressee.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 107,216 miles of line including cable and 593,555 miles of wire including conductors respectively, on the 31st March 1934. The numbers of departmental telegraph offices were 257 and 104 (including 19 Radio offices), respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,276.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1933-34
Inland ..	{ Private ..	4,107,270	11,788,787
	{ State ..	860,382	809,320
	{ Press ..	35,910	666,994
Foreign ..	{ Private ..	735,679	2,189,052
	{ State ..	9,896	28,077
	{ Press ..	5,278	82,068
		6,754,415	15,558,298

The outturn of the workshops during 1933-34 represented a total value of Rs. 10,56,800.

Wireless.—The total number of departmental wireless stations open at the end of 1932-33 was thirty-one, viz., Akyab, Allahabad, Basselin, Bombay, Calcutta (two stations), Cheduba, Chittagong, Delhi, Diamond Island, Jodhpur, Jutogh, Karachi (two stations), Lahore, Madras (3 stations), Nagpur, Peshawar, Poona, Port Blair, Quetta, Rangoon (4 stations), Sandheads (two pilot-vessels), Sandoway and Victoria Point, of which only Cheduba, Port Blair and Victoria Point backed telegrams direct from the public.

Seven of these stations were designated coast stations for communication with ships at sea and eleven worked as aeronautical stations in connection with regular air services.

The Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the wheatstone system being employed generally for this circuit.

Telephones.—On the 31st March 1934 the number of telephone exchanges established by the Department was 330 with 19,414 straight line connections and 3,890 extension telephones. Of these exchanges, 173 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 15 with 37,400 connections.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1934 was 18,197.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1933-34 was Rs. 10,12,000 and Rs. 16,77,46,000 respectively. The receipts for the year ended 31st March 1934 amounted to Rs. 10,72,62,000 and charges (including interest on capital outlay) to Rs. 11,24,55,000, the result being a net loss of Rs. 51,93,000.

Sanitation.

The history of the sanitary departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated; the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 *et seq.*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. It is yet too early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed." He quoted, the remark of the Government of India in their Resolution of 1914, that "in the land of the ox cart one must not expect the pace of the motor car."

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fairway to maturing but that in other provinces "with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed." But, he says, "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention."

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 2½ times that of England and Wales and nearly 4½ times that of New Zealand. "The information furnished for the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-beri, of the way in which malaria, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation."

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

The Commissioner in his annual report to Government for 1927 gave at the outset the following text for thought "Whether the institution of a Ministry of Health, which many of us think is long overdue for the Indian Empire, would accelerate progress is a matter of opinion, but there can be little doubt that such progress must depend not on a haphazard programme or on the fulfilment of an annual routine of measures sanctified by tradition but rather on the acceptance of such cardinal principles as have been laid down by the Chief Medical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these. Sir George Newman points out that 'Nothing is more certain than the fact that the physical advancement and health of mankind is dependant not upon a doctor's stunt here or a sanitary institution there but upon the whole social evolution of the people. Now, these desired ends are not reached merely by announcing them, still less by leaving things to chance, drift or fate. They can in any case only be partly reached at all without foresight, organisation and expenditure.' He proceeds to inculcate four basic principles which it is necessary for

any modern State to work to and which are as follows:—

- (a) ascertainment and accurate registration of the data obtainable;
- (b) the establishing of a definite standard to work to, which should be based on health and physiology and not on disease or pestilence;
- (c) the study of the character and incidence of disease, its causes and predisposing conditions, its mode of spread, its social factors which increase or reduce it and the means of its treatment and prevention,
- (d) the establishment of a national organisation by the assent of public opinion, such organisation being an index of the aspirations and enlightenment of the people.

It is for consideration how far we in India are now working to these basic principles or are likely to in the future and whether our existing public health organisation is best suited to enable us to do this."

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report:—

Province.	Birth Rates (per mille).		Death Rates (per mille)	
	1931.	Previous 5 years.	1931.	Previous 5 years.
Delhi	42 2	46 5	23 7	35 3

British India	34 3	35 7	24 9	26 0

Chief Causes of Mortality—There are three main classes of fatal diseases: specific fevers diseases affecting the abdominal organs, and lung diseases, intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1932 —

Mortality during 1932.

		D—Deaths.				R—Ratio per mille.

Statistical health reports for all India are always inevitably submitted are belated owing to the number of provinces from which returns have to be collated.

The Public Health Commissioner in his most recently published annual report, which concerns the year 1932, brings to notice certain leading facts. He shows that life-births registered during the year 1932 numbered 9,054,506 (4,702,913 males and 4,351,593 females or 81,384 less than the figure for 1931. Registered deaths numbered 5,805,666 (males 3,039,159 and females 2,766,507) as compared with 6,610,099 in 1931. 1,527,432 deaths or 26 per cent. of the total infantile occurred during the first year of life against 1,633,476 or 25 per cent in 1931. Compared with 1931 the rate of 168.7 for British India was lower by 10 p m

The Public Health Commissioner, dealing specially with the high rate of infantile mortality, mentions that statistics of the causes of these early deaths are not recorded but says that it is generally known that premature birth, infantile debility, bowel disorders, convulsions, malnutrition, diarrhoea and enteritis, respiratory diseases, inanition, smallpox, fevers and marasmus are the main causative features

Dr. Ruth Young, Director of the Maternity and Child Welfare Bureau of the Indian Red Cross Society, in some notes contributed to the Public Health Commissioner's report on this subject, says that "Various attempts recently made to ascertain more accurately the exact cause of maternal deaths have shown that mortality in connection with childbirth is very high and that the problem of deaths is even greater than had been supposed. The lower rate reported for rural areas is probably due to faulty registration, because the facilities for skilled attendance must obviously be lower in the average village even although the general standard of health may be higher. As in the case of infant mortality the general causes of this high rate are known, although further investigations in particular localities are required, e.g. into the prevalence of anemia of pregnancy and its influence on maternal mortality and the occurrence of diseases such as osteomalacia and eclampsia which complicate labour in certain parts of India. Apart from such definite entities which might be susceptible of rapid improvement the main causes of maternal mortality lie in social customs which cannot be quickly influenced. Any reform which has as its *modus operandi* in educational process is bound to operate only gradually. It can undoubtedly be hastened and in particular

by the provision of safe attendance at child birth. That means trained midwives and *daies* in far greater numbers than are at present available... On the other hand, there is undoubtedly a greater appreciation of clean midwifery on the part of the general public. It would be a tragedy if this appreciation were not met by increased facilities in the shape of competent midwives. The teaching of illiterate women is a tedious business, yet the numbers of even partially educated women who are ready to become midwives is still very small and the ancient prejudice against work which is regarded as "unclean" still lingers....

Ante-natal work which is such a powerful factor reducing maternal mortality is certainly on the increase. A greater number of women's hospitals are taking up this work and health visitors are playing their part. The attendance at ante-natal clinics is better than formerly and the public is beginning to understand the need for careful examinations.

"Within a short space of time, measurable probably in months, the constitutional reforms now under discussion will have been brought into force. And the public health problems with which the new Central Government will be faced are such as will demand urgent attention. It is difficult to understand how the present central health organisation could undertake the additional work which these problems must entail. More than one witness who appeared before the Parliamentary Joint Select Committee stated that a Ministry of Health was an essential feature of the future Government of India but this proposal, while it has received warm support from more than one experienced authority, still remains a mere hope for the future. Apart from central direction of policy which a well-organised Ministry of Health would be capable of planning one of the most important requirements of this country is an All-India Public Health Act which will lay down the broad principles on which all public health developments should be based. Unfortunately the financial position has never forbidden the creation of the Central Board of Health which was suggested by the Simon Commission and which had been planned by the present Member in charge of Public Health as a first stage in effecting closer co-ordination between individual provinces in matters of public health. These and other developments must, it seems, await happier and more prosperous days "

THE HEALTH OF THE ARMY.

General Health statistics of the British Army in India
during the year 1932.

1929		Average Strength.	Admissions.		Deaths.		Invalids sent Home.		Invalids Discharged in India		Invalids finally discharged in United Kingdom.		Average Constantly sick.	
			No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000
Officers	..	2,295	1,063	463.2	15	6.54	63	27.43	38.75	16.88
British Other Ranks.		55,336	32,177	581.2	164	2.96	400	7.59	1,458.31	26.35
British Other Ranks' wives		4,317	1,262	292.3	18	4.17	57	13.20	41.62	9.64
British Other Ranks' wives —parturition	..	803	33.21	..

Others	2,345	..	440	..	38	86.14	..

Among officers of the British Army in India 463.2 per thousand of strength were admitted to hospital during the year compared with 420.4 in 1931. There were 15 deaths, giving a ratio of 6.54 per thousand, compared with 18 and 7.76 in 1931. The average constantly sick in hospital was 38.75 or 16.88 per thousand of strength as compared with 15.11 in the preceding year. The total constantly sick, in hospital or out of hospital, on account of disease and injury was 27.94 per thousand.

Of British soldiers 32,177, or 581.5 per thousand were admitted to hospital compared with 647 per thousand in 1931 and 580.5 per thousand in 1931. There were 1,646 soldier deaths or 2.96 per thousand of the strength compared with 2.76 per thousand in 1931. The most important causes of mortality among soldiers were:—

Local injuries	27
Pneumonia	27
Enteric group of fevers	14
Heat stroke	12
Appendicitis	11
Heat exhaustion	6

The number, sent home as invalids was 409 or 7.39 per thousand of the strength, compared with 544 or 9.74 per thousand in 1931.

Among women and children (British Other Ranks) 1,262 women or 292.3 per thousand of the strength were admitted to hospital compared with 1,395 or 334.4 per thousand in 1931. Of the children, 1,999 or 299.1 per thousand of the strength were admitted to hospital, compared with 1,896 or 286.4 in 1931.

The principal cause of sickness among British troops was malaria of which there were, 4,654 cases, a decrease of 1,628 compared with 1931. The year's report by the medical authorities remarks, "In 1932, in India, the British troops lost about 32,568 days spent in hospital on account of malaria alone—a matter of serious economic importance to the State. The hard fact is that we know well how to deal with the malaria problem, but we have not the funds with which to put our knowledge to adequate practical use."

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1932.

	Average strength.	Admissions.		Deaths		Invalids sent to U K		Invalids discharged in India		Average constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000	No.	Ratio per 1,000.	No.	Ratio per 1,000
Officers	2,175	700	321.8	156	90	26	11.95	24.36	11.29
Indian Ranks .	121,013	52,017	429.8	3052	52	783	6.47	1,902.33	15.72

Others * .	..	2,094	..	25	73

* Includes Reservists, Indian Territorial Force, Royal Indian Marine, Indian State Forces R. A. F., Civilians and Pensioners

The admission rate of officers sick in hospital for 1932 was 321.8 per thousand of strength as compared with 367.4 in 1931. Among soldiers 52,017 or 429.8 per thousand of strength were admitted to hospital, compared with 451.3 per

thousand in 1931. There was thus a decrease of 21.5 per thousand on the 1931 figures. The death rate among Indian soldiers during 1932 was 2.52 per thousand as against 2.96 per thousand in 1931.

LEPROSY IN INDIA.

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921, when a Census was made, leprosy was regarded as an *infirmity* like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that possibly a majority of this number were the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. E. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,83,065 yielding an annual revenue of over Rs. 1,22,000.

In the scheme of anti-leprosy campaign which the Association put into operation, the respective parts to be played by the Central and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned. The Central Committee is vested with the task of promoting research, of preparing and publishing propaganda material, arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemicity of leprosy. Measures for the accommodation and treatment of leprosy patients and other schemes of public local interest are to be the concern of provincial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest —

(1) Pauper lepers form only a small fraction of the leper population and the disease is common among all classes of the community

(2) Segregation is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible,

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune. And, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Com-

mittees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects:—

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer.

The Governing Body of the Indian Council in their report for the year 1933, show that the Association's main work during the completed nine years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product during that period is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject"

There are now seventeen provincial branches, including one in Mysore State and each of them has established treatment centres for leprosy patients. In Assam, for instance, the number of clinics rose from 81 in 1932 to 145 at the end of 1933. Many clinics in different parts of India report absolute cures of the disease.

His Excellency the Viceroy is the President of the Indian Council, Maj Gen C A Sprawson, C.I.E., K.C.P., I.M.S., Director General of the I.M.S. the Chairman of the Governing Body, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Sir Ernest Burdon, Kt, C.S.I., C.I.E., the Honorary Treasurer.

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, renowned for its sufferings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr MacAllen, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great **Blindness Belt**. According to the last census returns there are 480,000 totally blind persons in this population of more

than 300 millions. That is an incidence of 1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Nasik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7; in Bijapur 2.6 as against 0.7; in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Pilsanpur 7 per thousand was found. If, as is not unlikely, this sort of error of under-estimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired. The term "blindness" has a different interpreta-

tion in every country. In a report on the Prevention of Blindness, published by the League of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses; or for illiterates, inability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. Recently the **All-India Blind Relief Association** has made an analysis of a very large number of patients attending its camps and dispensaries, and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

"No one," says Col R. H. Elliot, late of the Madras* Ophthalmic Hospital, writing in the British Journal of Ophthalmology of May 1919, "who has not worked in India can form any conception of the enormous amount of preventable and curable blindness which is laying its shadow over the health, happiness and usefulness of this great portion of our Empire" and the same writer in another place has said:—"It is difficult for anyone who has not had first hand experience of medical practice in the East to realise the state of things out there granular ophthalmia claims its victims by the ten thousand, whereas it is really a disease which, when properly treated at an early stage, should not cause the loss of a single eye. The neglect of patients suffering from small-pox and other febrile conditions leads to a vast amount of blindness, while the treatment of mild ocular affections by irritant drugs is probably one of the most evil factors that spread blindness broadcast throughout the land. Large numbers of men and women suffering from glaucoma, from cataract and from other curable diseases, are allowed to hide in their villages like wounded animals, waiting only their release by death. This is not an overdrawn picture. It is a statement of cold, hard, cruel facts, well known to everyone who has practised or is practising medicine in the East."

In an editorial on the Ophthalmic work in Egypt and the possibilities of similar work in India, the *Indian Medical Gazette* (March 1928) remarks:—"It would seem worth while for the Government of India to examine the working of this splendid organisation, for, in spite of the fact that workers in India have always been in the front in advances in ophthalmology, there has been little organised work in ophthalmic research except in Madras; even there the work has been done by men who have already a large amount of routine work to perform. India as a whole owes its position in the ophthalmic world entirely to the energies of individual enthusiasts, whose names are so well known that it is not necessary to mention them. What has been possible in Egypt should also be possible

in India and it would appear that the first step should be the establishment of **Schools of Ophthalmology**, in places like Madras and Calcutta where ample facilities exist. At these schools advanced teaching and research in ophthalmology would be carried out, and the next step would be to organise a system of ophthalmic relief at selected centres all over India." (There are now schools of ophthalmology at Madras, Bombay, Calcutta, and Lahore).

Again in an editorial from the same journal (Sept 1929) the following statements are made:—"What is wanted is some large organisation covering the whole of this sub-continent and aiming chiefly at **Prevention rather than treatment** In brief what the position now calls for is an all-India movement. Obviously the main question is one of general public health. Public health is a transferred department, but if the Health Department of the Government of India interests itself in the matter in co-operation with missionary and voluntary movements, we do not despair of seeing an all-India organisation created and built up."

Associations known as "**Blind Relief**" Associations have been working for several years in Western India, in conjunction with Government hospitals, to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas. They also work by means of trained village workers whose duty it is to find out the "hidden blind" and get them to the medical centre for relief; to find out cases of small-pox (a constant source of blindness in children); to inspect new born children for the detection of ophthalmia neonatorum; to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown. In 1917 Colonel Elliot wrote as follows, "To me it seems that the duty and privilege of undertaking this work lie with the State, and that no sum spent on such a task could be too large. Unfortunately this is not the view that has been taken by those in authority and consequently we see the spectacle of private enterprise endeavouring to undertake this colossal task. . . . It is at least permissible to voice an admiration for the stand taken by Mr. Henderson. [Founder of the Blind Relief Association movement, who began the work in 1913]. The best that one can hope for his endeavour is that he will succeed in arousing the conscience of educated Indians to the needs of their less fortunate countrymen and that this little cloud, no bigger than a man's hand, will end in a monsoon of active effort." As the above was written in 1917, it is not altogether applicable to the criticism of Government of to-day, as it has already been shown that there are now several schools of ophthalmic

mology in India, and the Government eye hospitals are doing tremendous work, but these hospitals are situated in the large towns and cannot possibly by any stretch of imagination, give relief to the millions living in the rural areas.

The All-India Blind Relief Association.—(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay, and has for its life President, Mr C G Henderson (late I C S) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Blindness, which has its headquarters in Paris and was formed on September 14th, 1929, under the auspices of the League of Red Cross

Societies and the American Society for the Prevention of Blindness. The Organising Secretary is R Crawford Hutchinson, The Town Hall, Bombay.

A beginning has been made, but it is only a beginning, and it is but the fringe of this vast problem that has been touched. The schools of ophthalmology in India are turning out ophthalmic surgeons who are crowding their profession in the cities and large towns. A scheme for taking these men and placing them in selected centres has been worked out, all that is required is monetary help. The cost is minimal and here is an opportunity for the generous and public spirited to emulate Sir Ernest Cassel, and give to India an eye service of which India and the whole world could be proud, and to the peoples of India that which to them is probably their most precious possession—their sight.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The amalgamation of these two Bodies which has taken place, forming the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the work. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being

increasingly realised, and nowhere more than in the units themselves. The result has been, in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres many of them assisted by the M & C W Bureau Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.

2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.

3. Child welfare.

4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150, and anything between Rs. 1 and Rs. 5 annually or consolidated payment of Rs. 50. At the end of 1933 there were 12,500 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1931 the number of members was 252,941.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is Sir David Petrie, Kt., C.I.E., C.V.O., C.B.E., and the Organising Secretary, Miss Norah Hill, A.R.R.C.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1933, stood at a capital investment of the face value of approximately Rs. 67½ lakhs. The income derived from the capital of the Society, (which is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

ST. JOHN AMBULANCE ASSOCIATION.

(Indian Council.)

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:—

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured,

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room;

(c) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic,

(d) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps.

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 200,000 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and over 10,000 tokens such as Vouchers Medallions, Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1933 22,853 persons attended 1,583 courses of instruction in First Aid, Nursing Home, Home Hygiene and Sanitation and of these 13,957 qualified for the Association's

certificates: i.e. 12,869 in First Aid, 584 in Home Nursing, 451 in Hygiene and 53 in Sanitation. A new course, Domestic Hygiene and Mothercraft, introduced in 1932 has not made much headway. To popularise Home Nursing, and Domestic Hygiene and Mothercraft courses among young girls and women special propaganda was stated. Steps were taken during 1933 to arrange first aid courses for the personnel of flying clubs, but the response was poor.

The Association has five grades of members, namely, Patrons, Honorary Councilors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs 1,000, Rs. 500, Rs. 100, Rs. 5, and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions. The total income for 1933 was Rs 17,897, a more or less normal figure. Management expenses amounted to Rs. 22,413. After adjusting assets and liabilities outstanding the revenue account for 1933 showed a loss of Rs. 6,305. The Council was able to carry on by taking a loan of Rs. 7,000 from the Indian Red Cross Society and by buying much less stores than it sold, the balance of stores stock thus being reduced by Rs. 11,000. The Council realise that the financial position and its maintenance by temporary expedients is unsatisfactory.

Their Excellencies the Viceroy and the Countess of Willingdon and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir David Petrie, Kt., C.I.E., C.V.O., C.B.E., is the Chairman, Miss Norah Hill, A.R.N.C., the General Secretary, and Sir Ernest Burdon, Kt., C.S.I., C.I.E., I.C.S., the Honorary Treasurer.

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic "mental hospital" at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the jails where, of course, no provision exists for any kind of treatment. According to the last Census (1931) out of a total popula-

tion of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India.

INDIA,

Provinces, States and Agencies.	General population.			Insane population.
	Males.	Females.	Total.	Total.
British India	139,931,556	131,595,377	271,526,933	} 120,304
Indian States	41,897,807	39,413,478	81,310,845	
Total for all India .	181,828,923	171,008,855	352,837,778	120,304

For the care of the 120,304 insanes of India and Burma there exists accommodation in mental hospitals for 9,244 hence only one person in eight out of the total insane population can obtain accommodation in institutions which exist

especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died :—

Provinces.	No. of Mental Hospitals	Admitted and readmitted during the year	Total Population of Mental Hospitals			Discharged cured.	Died.	Daily average.		Criminal Lunatics.
			Males.	Females.	Total.			Strength.	Sick.	
Assam	1	66	410	95	505	21	47	438·47	59·35	246
Bihar and Orissa ..	2	364	1,535	398	1,933	206	53	1,604·49	74·68	614
United Provinces ..	3	779	1,561	412	1,973	174	106	1,274·83	155·03	425
Punjab	1	397	982	262	1,244	132	102	889·88	73·63	207
Central Provinces ..	1	87	389	95	484	33	19	410·96	20·37	135
Bombay	5	608	2,109	237	171	1,534·20	93·7	226
Madras	3	469	1,155	357	1,512	143	80	1,105·29	135·89	194
Burma	2	276	1,111	169	1,280	88	58	1,052·55	44·06	564
Total	18	3,048	11,040	..	636	8,305·67	656·71	2,601

It will be observed that there is now no mental hospital in Bengal. Insanes from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota-Nagpur. The so-called "Central" Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in British India and Burma lies with the Civil

Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general

population that come under observation. On the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows :—

INDIA.

AGE.	Insane.		Distribution of the Insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female.
YEARS				
0-5	651	484	121	142
5-10	2,906	1,882	539	558
10-15	4,098	2,733	761	803
15-20	4,366	3,076	810	904
20-25	5,518	3,379	1,024	993
25-30	6,861	3,582	1,273	1,053
30-35	7,231	3,849	1,342	1,131
35-40	5,651	2,949	1,049	867
40-45	5,316	3,486	987	1,025
45-50	3,332	2,157	616	634
50-55	3,132	2,492	581	733
55-60	1,465	1,036	272	305
60-65	1,683	1,471
65-70	602	439
70 and over	1,070	1,006
Unspecified	270	133
Total for all India	54,151	34,154	623	857

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children. In 1925, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was remarkable only for the ignorance of the subject displayed by all who took part in it. The motion was eventually withdrawn. Finally there is still a lamentable failure everywhere to appreciate the intimate associa-

tion of crime with mental disorder and the extreme paucity of medical men throughout the whole of India with any real knowledge of mental diseases leave the decision of questions involving what the law terms "responsibility" in crime in the hands of medical men who are in no sort of sense "experts". In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic.

(See also "Insanity in India" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Colonel A. W. Overbeck-Wright, M.D., D.P.E., I.M.S. and Colonel H. P. Jago Shaw's book.)

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches; it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women.

It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,44,306 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. The Countess of Willington, C.I., G.B.E. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary Dr. M. V. Webb, C.M.O., W.M.S., Red Cross Building, New Delhi and Vice-regal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince

or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (b) Must be between the ages of twenty-four and thirty at entry. (c) She must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act; but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows			
1st	to 3rd year	Rs. 450	per month
4th	to 6th	"	" 500 "
7th	to 9th	"	" 550 "
10th	to 12th	"	" 600 "
13th	to 15th	"	" 650 "
16th	to 18th	"	" 700 "
19th	to 21st	"	" 750 "
22nd	to 24th	"	" 800 "
24th	and after	"	" 850 "

also an overseas allowance of Rs. 100 per month to those below 12 years' service and Rs. 150 per month to those of 12 years' service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the first three years of her service, and shall receive no increment after that period until such examination has been passed. In addition furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five. An officer recruited in England, whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(a) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (b) Leave on average pay is granted up to 2-11 of an officer's period on duty, according to Fundamental Rules. More than eight months' leave on average pay is not granted at one time. (c) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh. per day is granted in addition to $\frac{1}{2}$ average pay during study leave. (d) Extraordinary leave at any time at the discretion of the Executive Committee. (e) Leave not due may be granted subject to the following conditions:—(i) on medical certificate, without limit of amount, and (ii) otherwise than on medical certificate, for not more than three months at any one time and six months in all, reckoned in terms of leave on average pay. (f) The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (g) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave. A doctor appointed in England receives a sum of £100 to cover her passage and incidental

expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund, each member contributing monthly thereto ten per cent. of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum "or at such rate as the Council can invest without risk to the funds of the Association."

An officer loses the contributions made to her account by the Association with the interest thereon if she resigns (except on account of ill-health) before completing five years' service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

Free Passages.—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all-India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years' service.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of eight, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 200 to Rs. 300 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the eight members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who

have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. The fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director-General, Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs 3,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States.

Students are prepared for the Intermediate Science Examination, and the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

SENIOR STAFF.

Principal and Professor of Midwifery and Gynaecology—Dr Miss C. L. Houston, M.L., &c., Women's Medical Service

Vice-Principal and Professor of Surgery—Miss Hamilton Browne, M.B., Ch. M. (Syd.), D.T.M. (Calcutta), W.M.S.

Professor of Medicine—Miss N. H. Trouton, M.B., B.S. (Lond.), M.R.C.S., L.R.C.P., D.T.M. (Calcutta)

Professor of Ophthalmology—Miss R. Roulston, M.B., Ch. B. (Glas.), D.O. (Oxon), B.R.C.S. (Edin.), W.M.S.

Professor of Pathology—Mrs L. S. Ghosh, M.B., Ch. B. (Aberdeen), D.P.H. (Cambridge), W.M.S.

Professor of Anatomy—Miss K. J. McDermott, M.B., B.S. (Punjab), W.M.S.

Professor of Physiology—Miss E. Suric, M.Sc.

Professor of Radiology—Dr. Rokhl, M.B.B.S. (Ph) D.M.R. & E. (Cantab)

Lecturer in Physics and Mathematics, and Superintendent of the Science Department—Miss J. H. Ross, M.A., B.Sc. (Glas.)

Lecturer in Chemistry—Miss Soshella Ram, M.A. (Cantab)

Lecturer in Biology—Miss C. C. Burt, B.Sc. (Edin.)

Lecturer in English—Miss Ebbutt, M.A. (Dublin)
Modern Language Tripos (Cantab).

Bursar and Warden—Miss M. W. Jesson, M.A. (Cantab.)

Attached to the Hospital there are (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendent, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a proscribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of

tully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road South; Nurses' Academy, 6, Suburban Hospital Road; and Nurses' Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Goshia Hospital at Kilpauk, the Royapetia Hospital and the Ophthalmic Hospital, also the Lady Amphill Nurses' Institute and the South Indian Nursing Association (now amalgamated). President, Her Excellency Lady Goschen. The Association has under its management—*The Lady Amphill Nurses' Institute*, Western Castle, Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available. *The Lady Willingdon Nursing Home*, Western Castle, Mount Road, Madras, and *Nilgiri Nursing and Convalescent Home*, Ootacamund, for Medical, Surgical and Maternity cases. The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that

raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. This Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1933. Memorandum, Rules and By-laws of the Association were however revised brought into line with the actual working of the Association. Towards the end of 1927, the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929.

The following are affiliated Associations as well as Training Institutions—

St George's Hospital Nursing Association, Bombay, (for Nurses only), Hon. Secretary. R. W. Douglass, Esq

Jamshetji Jijibhoy Hospital Nursing Association, Bombay, (for Nurses and Midwives), Hon Secretary. Dr. M V. Mehta, O.B.E., F.R.C.P

Cama & Alibess Hospitals Nursing Association, Bombay (for Nurses and Midwives) Nil. This is now purely Govt. institution.

Sassoon Hospital Nursing Association, Poona (for Nurses and Midwives) Nil. This is now purely Govt. institution.

Karachi Civil Hospital Nursing Association (for Nurses only), Hon. Secretary: F. T. M. Day.

Civil Hospital Nursing Association, Nasik (for Nurses and Midwives), Hon. Secretary Civil Surgeon, Nasik.

Civil Hospital Nursing Association, Ahmedabad (for Nurses and Midwives), Hon. Secretary: Civil Surgeon, Ahmedabad.

Victory Nursing Association, Sholapur (for Nurses and Midwives), Hon. Secretary Civil Surgeon, Sholapur.

Infant Welfare Society's (Bombay); Wadi Bunder Maternity Home, Worli Maternity Home and DeLisle Road Maternity Home. (For Midwives only)

Hindu Nirashrit Fund Maternity Home, Surat. (For Midwives only).

Brahman Sabha Mhaskar Maternity Hospital, Bombay. (For Midwives only)

Sheth Vadilal Sarabhai General Hospital and China Maternity Home, Ahmedabad. (For Nurses and Midwives).

Dhanrajgurji Hospital, Sholapur. (For Nurses and Midwives).

Nawanagar State Hospitals: Irwin Hospital, Victoria Hospital and Ba Shri Sajuba Female Hospital (For Midwives and Nurses)

Bai Jerbai Wadia Hospital, Parel, Bombay (For Junior Examination only).

The following are only affiliated Associations but not Training Institutions.—

East Khandesh District Nursing Association, Hony. Secretary: Civil Surgeon, Jalgaon

Goculdas Tejpal Hospital Nursing Association, Hony. Secretary, R. W. Bullock

Bijapur Civil Hospital Nursing Association, Hon. Secretary: Civil Surgeon, Bijapur

Byramji Jijibhoy Nursing Association, Matheran.

Dharwar Civil Hospital Nursing Association, Hony. Secretary: Civil Surgeon, Dharwar.

Kanara Nursing Association, Karwar, Hon. Secretary: Civil Surgeon, Karwar.

Fanch Mahals Nursing Association, Godhra, Hony. Secretary: Civil Surgeon, Godhra.

Prince of Wales Nursing Association, Aden, Hony. Secretary: I. Taylor, Esq.

Louise Lawrence Civil Hospital Nursing Association, Sukkur, Sind.

The following are recognised Training Institutions:—

V. J. Hospital, Ahmedabad (for Midwives). State General Hospital, Baroda (for Nurses and Midwives).

Civil Hospital, Belgaum (for Nurses and Midwives)

King Edward VII Memorial Hospital, Parel, Bombay (for Nurses only).

Bai Yamunabai L. Nair Charitable Hospital, Lamington Road, Bombay (for Nurses only)

Bomanji Dinshaw Petit Parsi General Hospital, Cumballa Hill, Bombay (for Nurses only).

Lady Dufferin and Louise Lawrence Institute, Karachi (for Nurses and Midwives).

Morarbhai Vrajabhukandas Hospital, Surat (for Midwives).

American Presbyterian Mission Hospital, Miraj (for Nurses only).

St. Luke's Hospital, Vengurla (for Nurses and Midwives).

Parsi Lying-in Hospital, Bombay (for Midwives only).

St. Margaret's Hospital, Poona (for Nurses and Midwives only).

King Edward Memorial Hospital, Poona, (for Midwives only)

Nowrosji Wadia Maternity Hospital, Parel, Bombay (for Midwives only).

Zenana Mission Hospital, Broach (for Midwives only).

Lady Dufferin Hospital, Sholapur (for Midwives only).

Canada Hospital, Nasik (for Nurses and Midwives).

Municipal Maternity Homes, Bombay.—Bellasis Road (Byculla).

Imamwada (Mazgaon).

Cadell Road (Worli).

Victoria Cross Road (Byculla).

Khetwadi (Girgaon).

Provision for retiring allowances is made for all members on the basis of a Provident Fund. Address:—The Registrar, Bombay Nursing Council, Old Custom House, Fort, Bombay.

Lady Minto's Indian Nursing Association.—In 1906 this Association was inaugurated replacing the Punjab and Up-country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing however, to lack of funds it was found impossible to continue its administration and to carry out

the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lytton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project, and after much consideration and discussion with the Government of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Countess of Willingdon is President of the Central Committee in India.

Hon. Secretary: Malox F. M. Collins, R.A.M.C. Chief Lady Superintendent: Miss G. Beckett Address—Central Committee, L.M.I. N.A., Viceregal Lodge, Simla; and Red Cross Building, New Delhi.

Secretary, Home Committee: Miss M. E. Ray, R.R.C., 10, Witherly Mansions, Earls Court Sq.

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472, including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

The Trained Nurses' Association of India.—Was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession, (b) to promote a sense of *esprit de corps* among all nurses, (c) to enable members to take counsel together on matters affecting their profession, (d) to elevate nursing education by obtaining a better class of candidates, (e) to raise the standard of training, (f) to strive to bring about a more uniform system of education, examination and certification for trained nurses, both Indian and European, and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League and the Midwives' Union. The official organ of the Association is called "The Nursing Journal of India." The Association has 800 members and 304 student nurses.

Patrons. H. E. The Countess of Willingdon, Simla. H. E. Lady Brabourne, Bombay and H. E. Lady Marjorie Erskine, Madras.

President. Miss M. E. Abram, S.R.N., Matron-Superintendent, Presidency General Hospital, Calcutta.

Vice-Presidents. Miss D. Chadwick, S.R.N., S.C.M., Matron-Superintendent, Government Hospital for Women and Children, Egmore, Madras; Miss A. Wilkinson, S.R.N., S.C.M., Matron, St. Stephen's Hospital, Delhi.

Secretary. Miss Diana Hartley, S.R.N., S.C.M., 1, Madavakkam Tank Road, Kilpauk, Madras.

THE WOMAN SUFFRAGE MOVEMENT.

Hon. Secretary and Treasurer. Miss Gadsden, General Hospital, Madras.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the *purdah*, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The interment of one of their own sex, Dr Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation.

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made

though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councilors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the **Madras Legislative Council** to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men. Dr. (Mrs.) Muthulakshmi Reddi, the first woman member of the British Indian Legislature, has been able to introduce legislation to do away with the Devadasi service in the Hindu temples and the immoral traffic in women and children. She has also devoted her attention to the development of the education of girls and to the promotion of the health of mothers and children.

Mr. Trivedi brought forward a **Woman Suffrage Resolution** in the **Bombay Legislative Council** during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Saheb Harilal Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujarati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The **Bombay Council Debate** on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr. S. M. Bose, in the **Bengal Council**, moved a **Woman Suffrage Resolution**, which was debated for three days but finally defeated by 56 to 37 votes, a *bloc* of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the **Behar and Orissa Legislative Council** was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the **Bengal** and **Behar** Provinces have since granted qualified women the **Municipal Vote**.

In February, 1923, a world suffrage record was made by the *unanimous* vote of the **United Provinces Legislative Council** in favour of Woman Suffrage.

In 1926 the **Punjab** granted woman suffrage without a division, and in 1926 the **Central Provinces**.

The new Reform Bill for **Burma** has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the **Mysore Legislative Council** unanimously passed the **Woman Suffrage Resolution**. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, **Assam Provincial Council** granted Woman Suffrage for its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1929 soon after the All-India Women's Educational Reform was held in Patna, the Legislative Council of **Behar** and **Orissa** gave women the right of voting, election and nomination to the Council on the same terms as men. Thus the whole of British India has now

given to women equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancore, Cochin and Rajkot are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1926 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonam Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years. Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament, and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councils and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926, as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab followed its lead in August and October respectively. This enabled women to become members of the Councils which have been functioning since then. But the permission

came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being DR. MUTHULAKSHMI AMMAL, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of DEPUTY PRESIDENT OF THE COUNCIL. Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All-India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivai, the Begum of Cambay, Mrs. Ramabai Ranade, Mrs. Sarojini Naidu, Mrs. Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Dr. A. Besant, Mrs. M. E. Cousins, Mrs. Srirangamma, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhuri, Mrs. Kumudini Basu, Mrs. K. N. Roy, Lady Shafi, Mrs. Hassan Imam, Miss S. B. Das, Mrs. P. K. Sen, Mrs. Rustomji Faridgonji, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Raschid, Mrs. van Gildemeester, etc.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and interesting buildings, in Finsbury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School

provides teaching in more than seventy subjects. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is a whole time Professor in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Owing to the generosity of the Rockefeller Foundation a new sub-department under Professor Lloyd James has been opened for the teaching of and research into African Linguistics.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff.

Patron, H. M. the King. Chairman of the Governing Body, Sir Harcourt Butler, G.C.S.I. Director, Professor Sir E. Denison Ross, C.I.E. Litt. Ph.D. Secretary, G. W. Rossetti, M.A.

8. University Professor of Sanskrit and Appointed Teacher.
9. University Professor of Phonetics and Appointed Teacher.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs. 1,000 no probate duty is payable; up to Rs. 9,000 in excess of first Rs. 1,000 the duty is at 2%, between Rs. 10,000 and Rs. 50,000 the duty payable is at 3% and between Rs. 50,000 and 1,00,000 the duty payable is at 4% and over Rs. 1,00,000 the duty payable is @ 5%. In determining the amount of the value of the estates for the purposes of probate duty the following items are allowed to be deducted:

1. Debts left by the deceased including mortgage encumbrances.

2. The amount of funeral expenses.

3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it

appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal, and Bihar and Orissa, Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of fishermen in India, there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatnam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28, the fisher-population on the West coast totalled 114,502. The esteemed table fish of the coast consist of the Seer (*Cybbium* or *Scomberomorus*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), Jew fish (*Scaenidae*), Whiting (*Sillago*) Thread-fins (*Polynemus*), Sardines (*Clupea*) and Mackerel (*Scomber*). In economic importance, however, shoaling fish and fish of inferior quality such as Sardine (*Clupea*), Mackerel (*Scomber*), Cat fish (*Arius*), Ribbon

fish (*Trichiurus*), Goggles (*Caranx crumenophthalmus*) and Silver bellies (*Egulus* and *Cazza*) take precedence of the former. Sardine and Mackerel over-shadow all others. So greatly in excess of food requirements are the catches of sardines, that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres. The material is largely cured for export.

The Madras Department of Fisheries.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau

and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr. James Hornell, F.L.S., as Director and, is now controlled by his successor Dr. B. Sundara Raj, M.A., Ph.D. The activities of the Department have greatly expanded since its inception. A Committee constituted by Government to enquire into the working of the Department and make recommendations for its future development have just published their report in two volumes. The Evidence collected by the Committee is an octavo volume of 431 pages and the Report of the Committee is another similar volume of 264 pages. The Report is a remarkable production which summarises the aims and achievements of the Department during the last quarter of a century and contains detailed proposals for the expansion of the Department activities in different directions. The whole work of the Department has received a great impetus as a result of the report of this Committee. The Committee have emphasised the true purpose and aim of a technical Department of Fisheries to be essentially the material amelioration of the lot of the sea-going fishermen. The activities of the past 25 years were largely concerned with curing and canning, manufacture of oil and guano and safe-guarding of Government revenue. Remarkably successful as they were under the able guidance of Sir Frederick Nicholson, they seemed somewhat to obscure what should be the primary object and policy of the Department. Technological improvements in curing and canning and allied industries should follow ultimately in the wake of improved catches. Socio-economic and humanitarian endeavours however necessary and important, in view of the caste system of India, could not directly add one fish to the actual catch of the fisherman. The Committee have therefore urged that efforts to improve the professional knowledge of the sea-going fishermen and the catching powers of his craft and tackle which were inaugurated with the Inquisition of the trawler in 1926 must necessarily occupy the first place of the departmental programme. The higher staff now consists of five Assistant Directors and an Assistant Biologist. These are respectively in charge of (1) the chank and beche-de-mer fisheries; (2) the co-operative and educational work and the West coast fish curing yards; (3) inland pisciculture; (4) deep sea fishing; (5) propaganda for rural pisciculture; and (6) biological investigations and fishery research. Certain other officers have charge respectively of sections dealing with technological research, trout fisheries and the fisheries of the Northern Circars. A special staff of officers trained in co-operation have been appointed for intensive work among fishermen. The miscellaneous institutions controlled by the Department consist of a small demonstration cannery a research station for curing, canning and allied industries, a Fisheries Training Institute at Calicut for imparting special training to teachers selected to teach in schools for fish-children of which there were 43 with a total of 3,637 pupils in 1930. All the public fish curing yards which were under the control of the Salt and Abkari Department till 1924 have passed into the charge of the Fisheries Department.

It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise, in all the yards. Due to the transfer of the yards, the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and Peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing, the Department sets itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed. Statistics have been published since 1925-26 regularly every year in the bulletins.

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. Twenty-four volumes have been issued to date and the twenty-fifth volume in Press. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts. Its present success is due primarily to Dr. Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 115 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1930-31 was Rs. 1,97,777-0-4 and expenditure Rs. 2,85,913-12-4.

Pearl and Chank Fisheries.—In the absence of the pearl fishery during the year, the chank fisheries prospered. An unprecedented number of 467,628 chanks were fished yielding a gross revenue of Rs. 17,860-8-8.

The Inland Fisheries.—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourites of sportsman in India, the "Mahseer," Cat-fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 7 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and *Etiopius suratensis* which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit. Both the Gourami and *Etiopius* are largely vegetarian in diet. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public.

A turtle tank of rough semi-circular shape with 21 feet as diameter was added during the course of the year.

Deep Sea Fishing and Research.—The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms; and,
- (2) how to exploit these deep sea fisheries economically.

The department's trawler "Lady Goschen" has been exploring the off shore belt of the sea up to 100 fathoms from Point Calimere to Madras on the East Coast and Calicut to Pigeon Islands on the West Coast, with a view to ascertain the kinds and quantities of fish available there. The Assistant Biologist and staff worked on board the trawler. One remarkable discovery made by this systematic survey is that fish of better quality and in larger quantity are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands, during the months of the survey. Whether it is the case throughout the year is yet to be ascertained. However it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast, and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure.

Rural Pisciculture.—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds which number over 106,050 in the Presidency. The work though begun in July 1930, has already completed a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined and out of this number 175 wells and 85 ponds were selected as suitable for piscicultural operations and 45 wells and 1 pond were stocked.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1930-31 was 73.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presi-

gency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

Two industrial societies were started one at Blangad and the other at Palapatty on the West Coast in 1927 with the object of wearing the fishermen gradually from the influence of middlemen capitalists. The Government sanctioned a loan of Rs 1,500 each to the two societies

for purchasing boats, nets and other accessories for fishing purposes. They are working since 1927 with varying degrees of success.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calcutta to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Challyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Departments. In other places schools were opened by the Department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea vlsha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Carila catla*), mrigela (*Cirri uan nalgela*), prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Late calatjer*) and the mullets are the most esteemed, apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus*), pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden*

Crown being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. There is no immediate prospect of reconstitution of the Department. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish bye-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and

middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of byc-products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs for a rupee.

Vast strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progress is in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr Sorley's more important recommendations are—

- 1 The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does

- 2 The establishment of a bureau of fisheries information

- 3 The advisability of the transfer of the fish curing yards to the control of the Local Government, and

- 4 The encouragement by the Bombay University of marine biological research

Mr Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started.—A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay at Danda. The experiment was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R. I. M.) and suitable alterations were made on it to adapt it to the purpose of a carrier launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported in a much fresher state than had till then been

possible aroused the interest of the fishermen, who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Encouraged by the results, Government placed in 1934 an order for the construction of two launches with a local firm. The new launches eliminate the various defects revealed by the working of the original boat. One of them, the new 'Lady Sykes' is equipped with a 28.5 B.H.P. Gardner engine and the other with a 38 B.H.P. Ruston Lister engine capable of average speeds of 7 and 8 knots respectively. The total length of each launch is 35 feet, breadth being 10 feet and depth 4 feet 9 inches. Both the launches are equipped with life-buoys, life jackets, fire extinguishers and the usual navigation lights. Both boats burn crude oil. The latter launch has been bought on the hire purchase system by the head of the fishing community referred to above. The boats were put into commission in September and October 1934, respectively, ever since when they have been working satisfactorily. Their greater knottage and bigger storage capacity have induced the fishermen to put out to areas hitherto untapped for the purpose of supplying fish to the Bombay market. Both the launches have performed trips as far as Malvan, a town on the Konkan coast, about 180 miles from Bombay. The launches have thus brought large and rich fishing fields within easy reach of Bombay markets. This fish hitherto usually found its way to the fish curing yards, where it was dried and cured with salt. The operation of these launches at such a distant site makes it possible to furnish the Bombay market with a more regular and steady supply of fish than hitherto. The working of these launches has made it possible for Bombay to have an abundant supply of mackerel, a fish of immense food value and always relished. Until the introduction of the launches this fish was available only in very meagre quantities.

Fishermen who till now had felt that the provision of motor transport was beyond their scope are increasingly realising, after inquiry and inspection of the launches now running, that motor launches will play an important part in their trade in the future, and their more extended use will be the basis to any scheme for the improvement of their prospects. A spirit of enterprise is already abroad among the fishermen and some foresighted individuals encouraged by the success of the Bombay Government's experiment are now embarking upon the purchase of launches.

Incidentally it may be stated that the Department of Industries has already examined the possibility from the engineering point of view, of converting ordinary sail boats into vessels capable of propulsion by diesel engines. That this is feasible is evident from the experiment of the Burma Shell Oil Co., which successfully installed at 10 B.H.P. diesel engine on an ordinary sailing craft measuring 24 feet in length. The boat has been in operation since September 1933. She has made several trips to distant fishing sites. Her running has been very satisfactory.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object that they may eventually be able to take charge of their own launches whenever they decide to go in for these on an extensive scale. The benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly a fisheries information bureau has also been set up. The function of this bureau will be to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not now available to them.

The fishermen working on the marine fisheries of the Bombay Presidency number about 36,000 according to the statistics of the census held in 1931. The figure does not include, however, men working in fresh waters. Arnalla-Revanda and Bankot—Redi areas furnish by far the bulk of the Presidency's catch. The total tonnage of fish caught in the Bombay Presidency including Sind is slightly over 55,000 tons, the average value per ton of fish caught for the whole Presidency estimated on a basis of Rs 5 45 per maund being equivalent to Rs. 146 per ton. The annual catch per fishermen estimated at 1.55 tons is much lower than the Madras figure for the Malabar coast, where the catch per fishermen averages about 7 tons. The value, however, per ton in the Bombay Presidency, viz Rs 4 45 per maund, is much greater than Madras value, namely Rs. 1-5-4 per maund.

Bombay City's annual consumption of fresh fish averages about 10,000 mds, 9,000 mds, of which are obtained from sites not more than 30 miles distant and brought to Bombay mostly by ordinary sail boats. Apart from fishing boats fish is also brought to the city by trains from stations on the B. B. & C. I. Railway, besides by steamers from Karachi. Any increase in the present quantity of the supply of fish in the Bombay market is sure to be absorbed. Statistics of the consumption of fish in other large centres are not available.

The various types of fish brought to the fish curing yards in the Bombay Presidency annually average about 200,000 mds, for curing which 70,000 mds. of salt are usually issued. Experience has shown that dry cured fish lasts longer and in a sounder condition than wet cured fish. Most of the former is disposed of above the ghats. Wet cured fish, it has been said, commands scarcely any sale in the Bombay Presidency, but is appreciated by inhabitants of certain parts of the Madras Presidency and Ceylon. Mr. Sorley has expressed the opinion that if an improvement can be effected in the methods of curing, the resultant product could be more greatly popularised and reach a wider market.

This takes one to the question of starting a fish canning industry, which does not exist in the Bombay Presidency, although the quantity of fish caught is sufficiently large to warrant the start of such an enterprise. The most suitable site for embarking on a canning concern would be in the neighbourhood of Ratnagiri where fish occur in large shoals.

Experiments in canning conducted some years back by the Baroda Government at one of the chief fishing centres on the Southern Kathiawar coast and already yielded valuable and encouraging results particularly with regard to pomfrets.

The more important sea-fish are pomfrets, sole and sea-perches among which are included the valuable Jew-fishes (*Sciaen* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Basseln and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and Jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

The provision of cold storage facilities in Bombay marks a new departure in the marketing of perishable products and commodities and is a sign that the Indian capitalist is developing a greater interest in fish than heretofore. These facilities have been mainly designed with a view to making a large supply of fish available in the Bombay market.

A local firm has installed a plant for the quick freezing of fish. Special insulated boxes have been provided by enterprising firms for transporting fish. These boxes are lined with cork and zinc and provide an effective insulated medium against heat.

Two smaller plants, each with a capacity of 10 tons, have been installed at Malvan and Veraval, where large shoals of fish are found. The fish is frozen on the spot and exported to Bombay by steamers of the B. S. N. Co., and

also by rail sometimes from Diu, which is about 160 miles to the north of Bombay. Malvan, which, as already stated, is about 180 miles to the south of Bombay, enjoys the benefit of a regular daily steamer service to the latter city.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soormal, shark, rays and Jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of oyster is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

The existence of small pearl fisheries almost within Bombay city itself, will come as a surprise to many. The fisheries dot Bombay City seaface on its south-western and north-eastern sides. Apart from these two sites, pearl oyster fisheries are also to be found at Thana, a suburb of Bombay about 20 miles away, and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. The south-western site in Bombay City where the pearl fisheries have been recently discovered is situated in blocks Nos. 3 to 7 of the Back Bay reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane oyster, but the pearls, apart from being limited in numbers, are of indifferent quality.

The revenue derived from the various pearl fisheries is meagre. They are not leased out regularly every year, but only when a sufficient number of pearl oysters subsist on the beds.

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster particularly certain areas in Sind and some sites in the Ratnagiri and Kanara districts. The best oysters by far are derived from the Sind oyster beds. Oysters found elsewhere in the Presidency are generally small and undersized.

In the Gulf of Cutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territory in Kathiawar.

Burma.

Fresh, dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chiefly from Straits Settlements) was 9.83 lakhs in 1932-33. The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue—The economic value of any industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yielded a substantial revenue (about 43.62 lakhs *per annum* during the last decennium) and therefore they are one of the most important sources of national wealth. The demand declined to sixty per cent of this amount in the year 1933-34 owing to trade and economic depression. Some open lakes, pools of water and small rivers are classed as leaseable fisheries and are leased by Government to the highest and best bidders at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,554 of which 1,679 lie in the Irrawaddy Division, and 700 in Maubin—one of the five districts in that division.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north-east and west, in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

Licenses for fishing in all open fisheries are issued annually to persons who pay the prescribed fees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearling industry carried on, but leases for collecting green snails and sea slugs are issued.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung, (3) Kathahmyin and (4) Kabalu. These are generally made into salt fish. The creek and fresh water fish from fisheries are generally *ngakhvu*, *ngayan* and *ngayya*. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally *ngathalauk*, *Ngagyin* and *Nyamunyn*. *Kakalaung* and *Ngaponna* which are found in small quantities elsewhere in India are sold in abundance in the Rangoon market.

The Punjab.

During the year 1933-34 there was no marked change in the operations of the Fisheries Branch of the Agricultural Department. The number of fishing licenses issued rose from 6,917 in the previous year to 7,192 during the year 1933-34.

The catches of the fishermen were generally below average except in the Kangia District and in the Deg in Sheikhupura where they were satisfactory. The fish in Rivers and streams were washed down by heavy floods in the end of September 1933 and the catches of fishermen were poor during the winter months. There has been a heavy mortality among fish in the Sohanstream in the Rawalpindi District annually during the last 3 or 4 years. This has seriously affected the fishing in that water. Efforts are being made to find out the cause of this mortality and as soon as it is determined, any possible remedial measures will be adopted.

The trout fishing on the Beas and its tributaries in Kulu was good. 134 Trout angling licenses were issued in Kulu trout waters as against 141 in the last year. The weather was favourable for fishing and the rivers remained in good condition affording good sport and catches both to anglers and to the netmen. Brown Trout cultural experiments were successful in Kulu, but there was a heavy mortality among Rainbow Trout ova, the cause of which is under investigation. The carp spawned at Chhenawan on the 17th July, 1933, but numerous eggs were washed away by the heavy floods and lost as large-meshed screens had to be used at the outlet to prevent a heading up of water. Larvival fish are flourishing and spawning at the Chhenawan Fish Tanks from where these were sent to four different places for the control of malaria.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies

among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. Special Schools have been opened for the education of fisher lads.

The Forests

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to overestimate.

Types of Forest—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1930 was 249,710 square miles or 22·6 of the

total area. This was classed as follows: Reserved 107,753; Protected 6,263; Unclassified State 135,694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

(1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or *kikar* (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moisture parts of Burma and are characterized by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*); towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoraceae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera jones*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalayas.

(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position could make out a convincing case against the transfer in its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial changes.—Apart from territorial changes there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules, 1928:—

- (a) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council.
- (b) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor-General in Council
- (c) by direct appointment of persons selected in India otherwise than by competitive examination;
- (d) by the promotion on the recommendation of local Governments of members of the Provincial Forest Services;
- (e) by the transfer of promotion of an officer belonging to a branch of Government Service in India other than Provincial Forest Service.

Further recruitment to the Indian Forest Service, whether by promotion or direct appointment, has been suspended until a decision is reached on the recommendation of the Services Sub-Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service.

In Bombay and Burma, where Forest is a transferred subject new services called the Bombay and Burma Forest Services Class I, have been created to take the place of the Indian Forest Service.

(2) **The Indian Forest Engineering Service.**—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The future strength is not expected to remain at more than three (one each in Bombay, Madras and Punjab).

(3) **The Provincial Service.**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Indian Forest Service in 1920. The class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion upto 25 per cent. of the posts in the Indian Forest Service in provinces other than Bombay and Burma, such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their

recruitment being a matter for the local Governments. A certain number of posts in the service are filled by the promotion of specially promising Rangers. Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926, the Provincial Service course ceased to exist from 1928. The I. F. S. College has also closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras), the Burma Forest School at Pymmana (for Burma), and the Madras Forest College at Coimbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912, respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, is under the administrative control of the Inspector-General of Forests who is also the President. There are five main branches of research, namely Silviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. The Timber Testing expert is engaged temporarily on short term contract. Indian Assistants have been appointed to receive the necessary technical training and experience with the object of eventually taking the place of experts if and when properly qualified. The Wood Technology, Paper Pulp Wood Preservation and Seasoning Sections are in charge of Indian experts who have received special training in their various subjects in Europe and America.

As a result of Mr. R. S. Pearson's long and able administration of the Forest Economic Branch, the Government of India now have at Dehra Dun a series of forest workshops and experimental laboratories without parallel anywhere else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the unending stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their efficiency is of a very high order.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new

scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests. Unfortunately the need for retrenchment in all Government activities has stopped or curtailed many promising lines of investigation.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral product etc., The average annual outturn of timber and fuel from all sources during the quinquennium ended 31st March 1931, the latest date for which statistics are available, was 353,863,000 cubic feet against an average of 361,172,000 cubic feet per annum attained in the preceding quinquennium. The annual outturn of timber and fuel from all sources during the quinquennium 1928-29 averaged 362,217,000 cubic feet against an average of 340,000,000 c. ft. during the preceding quinquennium. The trade in bamboos was almost stationary, with expectations of great development under commercial exploitation for paper pulp manufacture in the near future. The five years witnessed the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The provincial Government after this experience adopted a more cautious policy.

An important measure for the development of forests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods, American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide-spread depression in the timber trade the employment of mechanical methods for the extraction of timber have been suspended for the present. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are regarded as on the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries.—The important rôle which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons, while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw

material yielded by the forests. It accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian

States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 65 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 to 1928-29 (in lakhs of rupees).

Quinquennial period.	(Gross revenue average per annum).	(Expenditure average per annum).	Surplus (average per annum).	Percentage of surplus to gross revenue.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.
1864-65 to 1868-69	27·4	23·8	13·6	36·4
1869-70 to 1873-74	56·3	39·3	17·0	30·2
1874-75 to 1878-79	66·6	45·8	20·8	31·2
1879-80 to 1883-84	88·2	56·1	32·1	36·4
1884-85 to 1888-89	116·7	74·3	42·4	36·2
1889-90 to 1893-94	159·5	86·0	73·5	46·1
1894-95 to 1898-99	177·2	93·0	79·2	44·7
1899-1900 to 1903-04	196·6	112·7	83·9	42·7
1904-05 to 1908-09	257·0	141·0	116·0	45·1
1909-10 to 1913-14	296·0	163·7	132·3	44·7
1914-15 to 1918-19	371·3	211·1	160·2	43·1
1919-20 to 1923-24	551·7	367·1	184·6	33·5
1924-25 to 1928-29	595·4	351·1	244·2	40·9

Most of the provinces show a steady increase of surplus. The slump in trade of the last few years was evident in the surplus for the year 1930-31 which fell to 121 lakhs from a previous "peak" figure of 273 lakhs in 1926-27. The figure, however, is still a most favourable one and indicates that the forests of India are being properly worked for the benefit of the country, with the passing of the current world-wide depression the temporary set back in financial results may be expected to disappear.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs Martin & Co., Calcutta. The agency held in England by Messrs W. W. Howard Brothers terminated in December 1926 and the work of

marketing Indian timbers in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level, because, according to the official explanation, "the intense conservatism in English timber trade and the difficulty of obtaining a footing for little known timbers have combined to make satisfactory sales very difficult."

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest Dehra Dun, U. P.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the New Imperial and International Communications Ltd.

For reasons of economy, most of the inland wireless stations in India were practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashgar in China, and Jodogh Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. New wireless stations for aeronautical purposes have been erected at Jodhpur in Bikaner, and Gaya. The wireless installations at Karachi and Calcutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes are under construction at Chittagong, Akyab, Sandoway and Bassein.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high-speed continuous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine

new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and now total about 30,000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) *via* Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula *via* Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In March 1931, telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the s.s. *Belgenland* a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea.—A noticeable feature of wireless development during the past two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marcony beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All Ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta.

the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 3509 metres, and Calcutta on 370.4 and 49.10 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed.

The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon. Sir Joseph B. Shore) and upon it sit at the present time Messrs N. B. Macbeth and N. M. Dumas, Bombay, H. H. Reynolds and K. C. Neogy, M.L.A., Calcutta, M. R. Coburn, Financial Adviser to Government in the Posts and Telegraphs Department and B. Rama Rao, Joint Secretary to Government in the Industries and Labour Dept. It is now proposed to establish a series of additional broadcasting stations in different parts of India so as to spread broadcasting receivable on low-powered sets throughout the land. Important proposals with this purpose in view were discussed by the Advisory Committee in Calcutta in December, 1930. An event of considerable importance was Bombay's broadcast to the world on December 13, 1933. This broadcast, played from the Empire Station, gave listeners in Europe their first opportunity of hearing a typical Indian programme.

Licenses.—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Prospects.—The Government of India have always encouraged the development of wireless

in India by private enterprise and to this source that India may look in the future for considerably increased internal radio communication. There are two most promising lines of development, viz.—

(a) Erection of small sets either for speech or Morse in districts where no land lines exist, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either Morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) The use of radio as a substitute for landline to form the trunk telephone route between two cities which already have telephone facilities.

These would, it is thought, open up a new industry which if properly fostered would very soon extend its sales outside the limits of India. It is believed that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and such an industry would find the right kind of skilled labour already in India.

Radio Telephone Service.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, Governor of Bombay, and Sir Samuel Hoare, Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for the past six years by the Indian Radio and Cable Communications Company between India and the United Kingdom and, since the beginning of this year, between India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly, there is a gradual extension of the area covered in India, and when the improvement of the landlines has been completed, nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner will be able to use the service for an overseas call. Before doing so, however, he will have to place a deposit of Rs. 100 with the Divisional Engineer, Telegraphs, Bombay.

The charge for a 3 minutes' conversation to (a) places in England, Scotland and Wales is Rs. 80, (b) Northern Ireland (Dublin) and the Isle of Man, Rs. 84. Each additional minute's conversation to places under (a) will cost Rs. 26-11 and to (b) Rs. 28.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on suzerainty before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkara*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stoeckeler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Sir Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1833 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilte*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilte*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1887, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending:—

(1) The Press Act should be repealed.

(2) The Newspaper Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities. (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (d) any person challenging the orders of Government should do so in the local High Court. (e) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months, (g), the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1886, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1889. Again, in 1897 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks.—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India.—Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Governor-General in Council may by notification in the Gazette of India appoint, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of—

- (a) the presidents, vice-presidents and the secretaries of the Local Boards,
- (b) one person elected from amongst the members by each Local Board,
- (c) a Managing Director and a Deputy Managing Director appointed by the Central Board,
- (d) not more than two non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the Meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Governor-General in Council shall nominate an officer of Government to attend the Meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs 500 each, of which Rs 125 has been called up, making the present capital of the Bank Rs 11½ crores, of which Rs 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs 5,35,00,000 and the Balance Sheet of 31st December 1934 showed the Government balance at Rs 6,72,19,792, other deposits at Rs 74,27,94,823 and Cash Rs 18,97,37,908, with a percentage of cash to liabilities of 23 15.

Agreement with Reserve Bank of India

The Bank shall enter into an agreement with the Reserve Bank of India which shall be subject to the approval of the Governor-General in Council and will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions to be contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act 1934, and there is no branch of the Banking Department of the Reserve Bank of India.

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent on the first 200 crores and 1/32 per cent on the remainder of the total of the receipts and disbursements dealt with annually on account of Government. As for the remaining five years the remuneration

to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation.

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments:—

- (a) during the first five years of this agreement Rs. 9 lacs per annum;
- (b) during the next five years of the agreement Rs. 6 lacs per annum; and
- (c) during the next five years of the agreement Rs. 4 lacs per annum.

In Schedule I, Part I, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are —

- (1) Advancing money upon the security of —
 - (a) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India
 - (b) Securities issued by State aided Railways, notified by the Governor-General-in-Council
 - (c) Debentures, or other securities issued under Act, by, or on behalf of, a district or municipal board or under the authority of any State in India
 - (d) Debentures of companies with limited liability registered in India or elsewhere.
 - (e) Goods, or documents of title thereto, deposited with, or assigned to the Bank
 - (f) Goods, hypothecated to the Bank against advances.
 - (g) Accepted Bills of Exchange or Promises
 - (h) Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g'

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases.

(3) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities.

(4) Investing the Banks' funds in the securities referred to in (1) a, b, c and d

(5) Making, issuing and circulating of bank post-bills and letters of credit to order or otherwise than to the bearer on demand

(6) Buying and selling gold and silver

(7) Receiving deposits

(8) Receiving securities for safe custody

(9) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims

(10) Transacting agency business on commission and the entering into of contracts of indemnity, suretyship or guarantee

(11) Acting as Administrator, for winding up estates.

(12) Drawing bills of exchange and granting letters of credit payable out of India

(13) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases

(14) Borrowing money upon security of assets of the Bank

(15) Subsidizing the pension funds of the Presidency Banks, and

(16) Generally, the doing of the various kinds of business including foreign exchange business

The principal restrictions placed on the business of the Bank in Part 2 are as follows —

(1) It shall not make any loan or advance

(a) For a longer period than six months except as provided in clauses 2 and 13 above,

(b) upon the security of stock or share of the Bank,

(c) save in the case of estates specified in Part I (Courts of Ward) upon mortgage or security of immovable property or documents of title thereto

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons of firms interconnected with each other in general partnership

The Imperial Bank.

Government Deposits.

The proportions which Government deposits have borne from time to time to the total Capital Reserve and deposit of the three Banks are shown below :—

In Lakhs of Rupees.

		1	2	3	4	Proportion of
		Capital.	Reserve.	Government deposits.	Other deposits.	Government deposits to 1, 2, 3 & 4

Proposal to Establish the Reserve Bank of India.—A Bill to establish a Reserve Bank in India as an essential preliminary to the introduction of the scheme of Reforms to give India a Federal Government has been passed by the Legislative Assembly and Council of State and received the assent of the Governor-General on March 6th, 1934. The proposals embodied in the Bill are given below.—

The Bank shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of the Act. The original share capital of the Bank shall be five crores of rupees divided into shares of Rs. 100 each, which shall be fully paid-up. The maximum number of votes any one shareholder shall have is 10, every five shares carrying the right of one vote. The number of share registers shall be fixed at five to be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon and the nominal value of the shares assigned to each centre has been fixed at Rs. 140 lacs for Bombay, Rs. 145 lacs for Calcutta, Rs. 115 lacs for Delhi, Rs. 70 lacs for Madras and Rs. 30 lacs for Rangoon.

Management.—The general superintendence and direction of the affairs and business of the Bank will be entrusted to a Central Board of Directors, which shall exercise all powers and do all acts and things which may be exercised and done by the Bank. The Board shall be composed of—

(a) A Governor and two Deputy Governors to be appointed by the Governor-General in Council after consideration of the recommendations made by the Board.

(b) Four Directors to be nominated by the Governor-General in Council.

(c) Eight Directors to be elected on behalf of the shareholders on the various registers.

(d) One Government official to be nominated by the Governor-General in Council.

The Governor and Deputy Governors shall be the executive heads, and shall hold office for such term not exceeding five years as the Governor-General in Council may fix when appointing them, and shall be eligible for re-appointment. A Local Board shall be constituted for each of the five areas.

Business which the Bank may transact.—The Bank shall be authorised to carry on and transact the following commercial business, viz.—The accepting of money on deposit without interest, the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions, the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank, the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac, the making of advances to the Governor-General in Council and to Local Governments repayable in each case not later

than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank shall act as Agent for the Secretary of State in Council, the Governor-General in Council or any Local Government or State in India for the purchase and sale of gold and silver, for the purchase, sale, transfer and custody of bills of exchange, securities or shares, for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares, for the remittance of such proceeds, by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The Bank shall have the sole right to issue bank notes in British India and at the commencement shall issue currency notes of the Government of India supplied to it by the Governor-General in Council and on and from the date of such transfer the Governor-General in Council shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

In addition to the note issue obligation the Bank shall undertake to accept monies for account of the Secretary of State in Council, the Governor-General in Council and of Local Governments and shall carry out their exchange, remittance and other banking operations including the management of the public debt on such conditions as may be agreed upon.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1sh. 5 49-64d. and not higher than 1sh. 6 3-16d. respectively, provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds. Every scheduled bank shall maintain with the Reserve Bank a balance of not less than 5 per cent. of their demand and 2 per cent. of their time liabilities.

Allocation of Surplus.—The Governor-General in Council shall transfer to the Bank rupee securities of the value of Rs. five crores to be allocated by the Bank to Reserve Fund.

After making the necessary and usual provisions out of profits, a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Governor-General in Council may fix at the time of the issue of the shares shall be paid and the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scales prescribed in the Act and the balance of the surplus shall be paid to the Governor-General in Council.

Provided that so long as the Reserve Fund is less than the share capital, not less than one lac of rupees of the surplus or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or

re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The Bank shall create an Agricultural Credit Department.

The full text of the Reserve Bank Act is reproduced elsewhere in the year Book.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

TOTAL DEPOSITS OF ALL EXCHANGE BANKS SECURED IN INDIA.

In Lakhs of Rupees.

1900	1050
1905	1704
1910	2479
1915	3354
1916	3803

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1933 of the undernoted Banks will give some idea of this

LIABILITY ON BILLS OF EXCHANGE RE- DISCOUNTED AND STILL CURRENT

	£.
Chartered Bank of India, Australia and China	3,477,000
Eastern Bank, Ltd.	183,000
Hongkong and Shanghai Banking Corporation	1,074,000
Mercantile Bank of India, Ltd.	1,383,000
National Bank of India, Ltd.	2,938,000
P & O Banking Corporation, Ltd.	1,359,000
	<hr/> 10,414,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks

prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion
- (5) Imports of sovereigns from London, Egypt or Australia

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1933 —

In Thousands of £

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of Simla suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets —

In Lakhs of Rupees

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impetuous people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½%, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaris and Mulkani having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonimis" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as

a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the month soon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates since the Imperial Bank was constituted:—

Year.	1st Half-year.	2nd Half-year	Yearly average.
1922	7.132	4.610	5.821
1923	7.410	4.5	5.959
1924	8.05	5.315	6.682
1925	6.585	4.701	5.643
1926	5.651	4.	4.825
1927	6.508	4.956	5.732
1928	6.945	5.456	6.2
1929	6.878	5.788	6.333
1930	6.508	5.277	5.892
1931	6.735	7.353	7.044
1932	6.022	4.033	5.027
1933	3.627	3.5	3.563
1934	3.5	3.5	3.5

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below :—

Total amount of Cheques Cleared Annually.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway, Bombay to Kalyan (33 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway, (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway, (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required, in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22½ to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 the deficit on the Railway budget was Rs. 166 lakhs. Seeking for some more economical

method of construction; the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87); the Southern Mahratta (1882); and the Assam Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted,—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge, 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Franke, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barri Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks, they were revised in 1896 to provide for an

absolute guarantee of 8 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 8½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 8 to 8½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Burma and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Gov-

ernment to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwise of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1910 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £813,000 in 1922-23.

The results in succeeding years will be seen from the following statements —

	Contribution to General Revenues	Railway Reserve Fund.	Total Gain
	£	£	£
1923-24 ..	4,941,387	4,635,985	4,437,712
1924-25 ..	4,135,641	2,854,936	9,577,372
1925-26 ..	4,486,045	1,108,433	6,990,580
1926-27 ..	4,707,239	3,460,000	5,504,478
1927-28 ..	3,933,834	1,937,895	8,167,239
1928-29 ..	4,588,950	1,561,650	5,871,729
1929-30 ..	4,301,775	8,192,625	3,027,300
1930-31 ..	4,020,150	—	3,890,850
1931-32 ..	*	—	—
1932-33 ..	—	—	—
1933-34 ..	—	—	—

* The contribution to General Revenues due for the year 1932-33 amounts to Rs 523 lakhs or 13 lakhs less than in 1931-32. The payment of the contribution has been held in abeyance until the return of prosperous years.

Rupees have been converted into £ at the average rate of exchange for the year.

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the state owned lines increased from Rs 84 crores in 1932-33 to Rs 86 crores in 1933-34

but the net result of the year's working was a loss of about Rs 8 crores, no contribution could therefore be made to General revenues during the year.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22½ per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line, but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the two years ended 1909 after meeting all charges including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nazda-Mutta line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories has for some time kept this scheme in the background. The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried

out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed, the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Loch, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1922-23 the principal open line improvements consisted in —

- 1. Doubling of the Ruparanti Bridge on the B. N. Railway.
- 2. Erection of new spans on the Kofri Bridge over the Indus, N. W. Railway.
- 3. Replacement of girders on the Jumna Bridge, Delhi.
- 4. Rebuilding of the Mahanadi Bridge on the Katni Branch, B. N. Railway.
- 5. Building the new double track Bridge over the Nerbudda near Branch, B. B. & C. I. Railway.
- 6. Shotanur-Cochin Railway conversion, S. I. Railway.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public-Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole

question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. Those notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State worked systems aggregating 18,499 miles in on the 31st March 1929,

(b) the representative of the predominant owning partner in systems aggregating 29,451 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial

Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts, which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and even Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity central carried out on railways and to undertake work on the many forms of railways publicity which can be best

organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board, therefore consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers, to the Central Publicity Officer and the Officers in the Central Publicity Bureau and to the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management.

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company-managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation.

State-managed lines have generally adopted the divisional organisation.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Accounts Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work, no definite decision has yet been arrived at.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional, they were to be converted into broad-gauge as soon as the traffic justified it; consequently

they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barai Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management.—

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of company domiciled in India to take these railways over eventually on a basis of real Company

management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4½ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st, 1929, the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council — "that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways."

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital, (b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts

and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent instead of 5/6th per cent on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only ½rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining ½rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23.

The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr Pope, General Executive Assistant to the President of the L. M. S. Railway was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that "job analysis" should be initiated on all railways, the following recommendations were made —

- (i) The better use of Locomotives
- (ii) The better use of Railway Land
- (iii) Additional research and experiments
- (iv) Improved Workshop practice
- (v) More careful listing of surplus track, equipment and accommodation
- (vi) Possibility of reducing hot axles

During the year under review four cases were referred to the Rates Advisory Committee

- (a) Complaint alleging quotation of preferential rates for firewood from certain stations
- (b) Complaint of undue preference in rates for unpressed cotton
- (c) Complaint of unreasonable rates being charged on coal from certain areas
- (d) Complaint regarding rates for rice from certain stations

During 1932-33 six cases were referred for investigation

As a result of Mr Pope's report regarding the possibility of further economies on railways and in particular with reference to the report on "job analysis" Small committees were formed on the leading railways to conduct detailed investigations. Reports show that the work is being continued vigorously and with an encouraging degree of success. The more interesting features are as follows —

- 1 On the B. B. & C. I. Railway savings due to intensive use of locomotives and reduced staff in certain workshops and at stations, amounting to Rs. 3.52 lakhs.
- 2 Burma Railways savings amounting to Rs. 26,000 were realised during the year and it is estimated that this will increase to Rs. 74,000 annually in future years.
- 3 E. B. Railway a conservative estimate shows the savings as Rs. 2,14,864 due chiefly to better use of rolling stock, more efficient maintenance of signals, reduced consumption of high grade fuel.
- 4 E. I. Railway savings amounting to more than Rs. 7 lakhs.
- 5 G. I. P. Railway savings effect Rs. 4.29 lakhs chiefly under wages.
- 6 M. & S. M. Railway savings amounting to Rs. 46,020 and annual economies anticipated at Rs. 72,559.
- 7 N. W. Railway savings amounting to Rs. 12.67 lakhs.

8. S. I. Railway savings amounting to Rs. 22,704.

Mr Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

Rates Advisory Committee.

The Rates Advisory Committee was constituted in 1926 to investigate and make recommendations to Government on the following subjects —

- (1) Complaints of undue preference,
- (2) Complaints that rates are unreasonable in themselves,
- (3) Complaints or disputes in respect of terminals,
- (4) The reasonableness or otherwise of any conditions as to the packing of articles specially liable to damage in transit or liable to cause damage to other merchandise,
- (5) Complaints in respect of conditions as to packing attached to a rate,
- (6) Complaints that Railways do not fulfil their obligations to provide reasonable facilities under Section 42 (3) of the Indian Railways Act.

1932-33 five cases were referred for investigation and report

Inauguration of the Main Line Electric Service, G. I. R. Railway.

The inauguration of the electrified main line section of the G. I. R. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bhor Ghat Reversing Station. The problem of eliminating the Reversing Station had been seriously considered on several occasions in the past but it was not until 1923, when electrification had been definitely decided upon, that final survey operations became imperative.

Apart from the location of the realignment which called for the adoption of methods, unusual in ordinary survey practice, the works involved in the construction of this double line broad-gauge section of railway were of considerable magnitude, chiefly in the form of heavy tunnel construction.

There are three tunnels in all aggregating 4,595 feet or .87 of a mile. The longest of these is 3,100 feet built throughout on a curve of the sharpest radius which occurs in these ghats. Allowing for curvature and the considerably increased spacing of tracks necessitated by the adoption of the latest standard dimensions, a tunnel section of 34 feet 6 inches wide and 24 feet 6 inches high was deemed upon. This is considered to be the largest tunnel section in the world.

The steam trains to Poona took approximately 6 hours for the journey and it is anticipated that with electric traction this timing will be now reduced to approximately 3 hours.

With the opening of the electrified section between Kalyan and Igatpuri in October 1930, it is believed that the G. I. P. Railway has the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world.

Miscellaneous.

Damage by Earthquakes, Floods, Cyclones—The most important feature is the earthquakes of the 15th January which took place in Bihar. The Bengal North-Western Railway suffered considerable damage and the cost of repairs to track, buildings and bridges amounted to Rs. 23 lakhs the loss of human life among the staff amounted to 2 killed. The East Indian Railway however, suffered damage amounting to Rs. 65 lakhs and loss of life of 17 killed and 48 injured. The damage on the Eastern Bengal Railway amounted to Rs. 4½ lakhs.

Publicity.

The Central Publicity Bureau and its branches in London and New York have continued their general activities on the lines of the previous years. An important in the tourist traffic to India generally from Europe and America is recorded. A decrease in "luxury" traffic, that is to say, traffic in tourists from overseas who make use of tourist cars, has been observed, but an increase in "Inland tourist car traffic," that is to say, the use of tourist cars by people in India, is reported to the extent of 46.5 per cent over the figures for the previous year.

During the year under review, three "World Cruise" ships visited India as against two in 1932-33. One of these ships in particular, the "Gripsholm," is of special interest as she represented a new venture in "World Cruises." This cruise was primarily to India and the overland journey in this country was included in the cost of the ticket. All land trips from Ports touched on the journey out and back were extras. The "Gripsholm" was run by the Swedish American Line for the benefit of the continent of Europe generally and of Sweden, Norwegians and Danes in particular. It is believed that advertising on the Continent by the Indian State Railways has materially contributed to the organisation of this cruise.

Generally speaking both the London and the New York Bureaux show a marked increase in the work done.

As in previous years, Indian Railways were represented at the British Industries Fair, 1934, and at the Advertising and Marketing Exhibition held at Olympia during 1933. In America, Indian Railways received valuable publicity at the Century of Progress Exhibition at Chicago (1933) by collaboration with the Chrysler Corporation Ltd.

In India, the Central Bureau has continued its activities in regard to fostering pilgrim traffic to places of religious importance, and the results obtained have shown a remarkable improvement over other years indicating that the lines worked on are correct.

In 1933-34 the tourist traffic to India showed a very definite increase, not only the tourists travelling by themselves but also the "World

Cruise" ships of which there were three instead of two in the previous year. Both the London and New York branch offices reported a great increase in their work.

As regards internal traffic and in particular 3rd class traffic; the experiments carried out in 1932-33 were continued and extended with very satisfactory results.

Capital Expenditure.—The outlay during the year 1932-29 was Rs. 27.53 crores, of which Rs. 25.41 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction. Close on 1,300 miles of new railway were opened for traffic during 1928-29, and at the close of the year there were some 2,100 miles under construction.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade.

Generally speaking the trade returns tend to show that the depression has passed its peak and that improvement may be expected. The total value of exports including re-exports from British India during the year 1933-34 amounted to Rs. 150 crores and that of imports to Rs. 115 crores. As compared with the previous year the export traffic recorded an improvement of Rs. 14 crores or an increase of 10 per cent. While the imports declined by Rs. 17 crores or a decrease of 13 per cent.

The principal features of interest from the point of view of export are an increase in raw cotton from Rs. 20.3 crores to Rs. 27 crores. Twist and Yarn from Rs. 79 lakhs to Rs. 82 lakhs. Raw jute from Rs. 9.73 crores to Rs. 10.93 crores. Gunny cloth from Rs. 10.24 crores to Rs. 11.38 crores. Wheat remained practically unchanged. Tea although showing a decline in quantity showed an increase in value due to better prices, Rs. 17.15 crores to Rs. 19.85 crores. Exports of oil seeds showed an increase of 53 per cent in quantity and 21 per cent in value. Hides and skins improved from Rs. 7.43 crores to Rs. 9.40 crores and Metals and Ores from Rs. 4.68 crores to Rs. 5.49 crores.

As regards imports foreign textiles recorded a decrease of 31 per cent and 12 per cent as compared in 1932-33 and 1931-32 due primarily to smaller imports of cotton piece-goods, amounting to Rs. 13.49 crores as compared with Rs. 21.26 crores in 1932-33. Silk raw and manufactured, wool and woollens, artificial silk including yarn and other mixed varieties also showed a falling off. Under the metals group there was a decline of Rs. 24 lakhs. Metals other than iron and steel and manufactures thereof declined from Rs. 4.42 crores to Rs. 3.95 crores. Imports of foreign sugar declined from Rs. 4.23 crores to Rs. 2.71 crores.

Imports of iron and steelware likewise machinery and millwork, motor vehicles and rice in husk.

This visible balance of trade in merchandise and treasure for the year 1933-34 was in favour of India to the extent of Rs. 92 crores as compared with Rs. 68 crores in 1932-33.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below —

Commodity.	1932-33.		1933-34		Increase + Decrease— in earnings Rs. (in lakhs.)
	No of tons originating (in millions.)	Rs (in crores.)	No of tons originating (in millions.)	Rs. (in crores.)	
<i>Increases</i>					
Cotton raw and manufactured .	1 46	5 19	1 70	5 96	+77
Oil-seeds . . .	2 04	2 88	2 57	3 64	+70
Fuel for public and foreign Railways	17 51	8 90	18 47	9 65	+75
Rice	3 61	3 45	4 36	3 89	+44
Sugar	0 64	1 30	0 84	1 67	+37
Iron and Steel, wrought	1 15	2 00	1 30	2 21	+21
Metallic Ores . . .	1 77	0 45	2 24	0 64	+19
Jute, raw	0 81	1 12	0 99	1 29	+17

Open Mileage—The total route mileage on March 31st, 1933, was made up of—

Broad-gauge.. ..	21,131 77 miles
Metre-gauge.. ..	17,644 66 „
Narrow-gauge	4,176 91 „

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows—

Class I	38,298 10 miles
Class II	3,509 61 „
Class III	1,145 60 „

During the year 1933-34 the mileage of new lines under construction was 50 37 miles.

Class I Railways	Number of seats in passenger carriages.			
	1st	2nd	Inter	Third
5'-6" ..	21,682	45,392	65,146	674,837
3'-3½" ..	10,904	14,876	17,778	371,808

Financial Results of Working.—The total gross earnings of all railways in India during the year 1933-34 amounted to Rs. 86½ crores or nearly 2½ crores more than in the previous year. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows.—

(Based on actuals of penultimate year 1931-32)

		(Figures in thousands)	
		Rs.	Rs.
1.	1 per cent. on capital of Rs. 7,22,91,99 at charge—commercial lines—to end of 1931-32	7,22,95
(i)	Receipts (1931-32)—		
	Gross traffic receipts—commercial lines	85,31,16	
	Subsidized companies—share of surplus profits	1,175	
	Interest on depreciation and reserve fund balances and dividends on investments in branch lines and in collaneous receipts	99,17	
	Total Receipts		86,15 08
(ii)	Charges (1931-32)—		
	Working expenses—commercial lines	60,95,91	
	Indian States and railway companies' share of surplus profits	64,19	
	Land and subsidy	9,17	
	Interest—		
	On capital at charge—commercial lines	30,26,62	
	On capital contributed by Indian States and companies	1,31,14	
	Miscellaneous railway expenditure	41,71	
	Contribution at 1 per cent. on capital at charge—commercial lines	7,22,95	
	Total Charges		1,00,91,69
(iii)	Deficit		14,36,61
(iv)	Contribution of 1/5th of surplus
3.	Total contribution from railway revenues 1 plus 2 (iv)		7,22,95
	Deduct—Loss on strategic lines—		
	(i) Interest on capital	1 18 87	
	(ii) Miscellaneous railway expenditure	4,05	
	(iii) Loss in working	43,48	
	(iv) Interest on the amount of loss in working met from Depreciation Reverse Fund of commercial lines	5,55	
			2 01 95
4.	Net payment due from railway to general revenues in 1933-34		5,21 00

After meeting all interest and annuity charges Government therefore received a net profit of 4.04 crores on the capital at charge of the State *minus* the net receipts, that is the gross receipts *minus* the working expenses, have in recent years given the following returns:—

	Per cent.
1913-14	5.01
1923-24	5.24
1924-25	5.85
1925-26	5.31
1926-27	4.95
1927-28	5.30
1928-29	5.22
1929-30	4.65
1930-31	<i>Nil</i>
1931-32	<i>Nil</i>
1932-33	<i>Nil</i>
1933-34	<i>Nil</i>

Up-to-date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton mile of those countries which have published statistics of working later than 1919.—

	Receipts per ton mile Pies.
United States of America 1929	5.70
United Kingdom 1929	15.15
Japan 1927-28	7.26
Switzerland 1928	20.25
South Australia 1928-29	17.25
Canadian Railways 1929	5.75
India 1929-30	6.14

In the case of receipts per passenger mile the figures for United States of America and India are as follows:—

United States of America 1929	14.78 pies
India 1929-30	3.28 "

While in England the present standard fare charged per mile third class is 18 pies.

From the above it will be seen that railway transportation of freight in India is one of the cheapest in the world and still more so for passenger traffic.

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railways.

	Year.	Operating Ratio
United States of America	1930	74 per cent.
France	1925	84.15 "
English Railways	1928	79.40 "
South African Railways	1928-29	77.80 "
Argentine Railways	1927	71.05 "
Canadian Railways	1929	81.21 "
India	1913-14	51.79 "
	1925-26	62.69 "
	1926-27	62.04 "
	1927-28	61.49 "
	1928-29	62.77 "
	1929-30	60.02 "
	1931-32	71.08 "
	1932-33	71.61 "
	1933-34	71 "

Output of Railway owned Collieries The output of railway owned collieries during 1930-31 was—

2,926,812 tons for a total of 6,629,014 tons

Consumed for 1931-32 the figures are

2,484,891 tons for a total of 5,759,398 tons

For 1933-34 the figures are

2,170,020 tons for a total of 5,935,826 tons

Number of Staff—The total number of employees on Indian Railways at the end of the year 1933-34 was 701,362 as compared with 710,512 at the end of 1932-33. The following table shows the number of employees by communities on 31st March 1932, 1933 and 1934 —

	Europeans	Statutory Indians					
		Hindus	Muham- madans	Anglo- Indians	Sikhs	Indian Christians	Other Classes
31st March 1932	4,532	520,575	157,876	13,570	8,767	14,398	12,261
31st March 1933	4,297	504,082	152,875	13,018	8,591	15,574	11,804
31st March 1934	3,906	497,505	151,625	12,814	8,339	16,167	10,976

Indianisation.—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as

practicable up to 75 per cent. of the total number of vacancies in the Superior Services of the Railway concerned.

Fatalities and Injuries.—During the year 1931-32 the number of persons killed decreased by 292 as compared with the previous year; the number of passengers killed decreased by 82 and of passengers injured by 125.

The following table shows the numbers killed and injured separately under passengers, railway servants and others for 1932-33 as compared with 1931-32 :—

	Killed.		Injured.	
	1932-33.	1931-32.	1932-33.	1931-32.
<i>A.—Passengers</i>				
In accidents to trains, rolling-stock, permanent-way, etc.	6	21	61	160
In accidents caused by movements of trains and railway vehicles exclusive of train accidents . .	215	204	761	785
In accidents on Railway premises in which the movement of trains, vehicles, etc., was not concerned	10	7	21	10
<i>B.—Railway Servants.</i>				
In accidents to trains, rolling-stock, permanent way, etc.	8	9	79	23
In accidents caused by movements of trains and railway vehicles exclusive of train accidents . .	184	177	1,789	1,975

Total	2,757	2,826	9,509	10,982

Local Advisory Committees.—In the Annual Reports by the Railway Board on the working of Indian Railways, references are made each year to the work that is being done by Local Advisory Committees on railways in bringing to the notice of their respective railways administrations matters affecting the general public in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways, except His Exalted Highness the Nizam's State Railways and the Jodhpur Railway. During 1929-30, the Barsi Light Railway constituted an Advisory Committee for that line.

These committees constitute a valuable link between railways and their clientele.

The following is a list of some of the more important matters discussed :—

Improvements in coaching stock; Provision of cold storage compartments, Provision of Indian dining cars, Reduction of rates and fares, Arrangements for dealing with traffic at festivals; Reservation of seats in intermediate class carriages; Supply of drinking water to passengers, Sleeping accommodation for passengers; Provision of bathing cabins at stations, Despatch of goods; Portage charge over railway bridges; Overcrowding in lower class carriages; Provision of waiting rooms for ladies, Combustion of culverts of permanent openings for flood waters, Electrification of railway stations; Provision of over-bridges; Remodelling of stations; Mileage of coupons.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	1,306.41
Capital at charge	Rs. 23,49,41,000
Net earnings	Rs. 38,12,000
Earnings per cent.	1.62%

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	21,12.99
--------------------	----------

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatissgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Earnings per cent.	2.85%

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State Railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Earnings per cent.	6.37%

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near

future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said,—"During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route *via* the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee. From January 1st, 1920, its working has been taken over by the State.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Earnings per cent.	1.50%

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah *to* Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the share-holder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhand railway was amalgamated with it.

Mileage open	4,394.75

Net earnings	Rs. 6,45,99,000
Earnings per cent.	4.49%

(Mileages are route mileages.)

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhore Ghat and 9½ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calcutt. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

The North-Western

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotli. The interval between Kotli and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

*(Commercial Section)

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre-gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhurawal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State, the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jmd, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

At the end of the financial year 1929-30 a total of 1257 57 miles of new lines was under construction, distributed as follows —

	Miles.
5'6" gauge	730.77
3'-3½" gauge	457.51
2'-6" gauge	60.29

During 1929-30 sanction was accorded to the construction of new lines totalling 227 77 miles.

	Miles.
5'-6" gauge	93.00
3'-3½" gauge	115.17
2'-6" gauge	19.00

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the seabottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaungkyi stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system.

(a) Excludes antimonial lead.

(b) Export values.

(c) Export f.o.b. values.

(d) Reliable figures not received.

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The

high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

COAL.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

(a) Estimated

Although there was a continuance during 1933 of the decrease in production of coal from the peak production of 23,803,018 tons in 1930, yet the decrease was only 364 224 tons or about 1.8 per cent, as contrasted with decreases of 8.8 per cent and 7.2 per cent in 1931 and 1932 respectively. This decrease was due mainly to Bihar and Orissa and Bengal with smaller falls in Hyderabad, Baluchistan, Assam, and Rajputana, partially balanced by a very large increase in the production of the Central Provinces, with smaller increases in the Punjab and Central India. The substantial decrease in Bengal and Bihar and Orissa in 1933 is in continuation of the heavy decreases of 1931 and 1932. In 1932 this fall was shared by all the fields except Talcher, which showed a substantial increase of 111,274 tons. During 1933, however, five fields showed increases of which Talcher was responsible for 62,953 tons and Gindih for 52,681 tons, the increases for Jainti, the Rajmahal Hills and Ranpur being trivial. The decrease was shared by the remaining four fields as follows: Jharla, 536,334 tons; Rangaj, 153,304 tons; Katapura, 65,690 tons; and Bokaro, 44,109 tons. In Central India there was, in contrast to the continuous decreases of the last 4 years, an increase in the output from Umaria of 6,085 tons; in addition, there was an increase of 6,195 tons from the Solapur field. In the Central Provinces there

was another large increase amounting to 146,362 tons in the output from the Pench Valley, whilst the output from Korea State, which showed an initial production of 3,517 tons in 1930, rising to 31,351 tons in 1931, 113,858 tons in 1932, amounted to 264,257 tons in 1933, representing the very large increase of 150,399 tons. In addition, Ballarpu showed an increase of 38,923 tons. In Hyderabad State, while the Singareni field was responsible for a decrease of some 74,000 tons, and Sasti for a decrease of over 11,000 tons, the Tandur coalfield showed an increase from the initial output of 126,471 tons from 1932 to 184,165 tons in 1933.

A feature of the last 10 years has been the very large expansion of the output from the Central Provinces from 679,081 tons in 1924 to 1,500,911 tons in 1933. This has undoubtedly accentuated the fall in output of Bihar and Orissa from 14,105,329 tons in 1924 to 11,257,984 tons in 1933.

In 1929 the statistical position at the end of the year showed a very great improvement in spite of the increase in the total output, stocks in the six provinces of Assam, Baluchistan, Bengal, Bihar and Orissa, the Central Provinces and the Punjab, for which such figures are available, showing a total reduction of 781,477 tons. In 1930 the smaller increase in production was not accompanied by another improvement in the statistical position, but by a slight worsening, namely an increase of stock amounting to

141,766 tons. In 1931, in spite of a large fall in production of over 2,000,000 tons, the position deteriorated still further with an increase of stocks of 428,334 tons, and in 1932 this deterioration continued, so that in spite of a decreased output of over 1½ million tons stocks increased by 250,629 tons. During 1933 the position showed no substantial change, but the

slight reduction of stocks may be symptomatic of a tendency towards a better adjustment of production to demand.

The decreased output of 1·8 per cent in 1933 was accompanied by a decrease of 10·1 per cent, in the total value of the coal produced in India from Rs. 6,80,96,604 (£5,120,045) in 1932 to Rs. 6,11,86,083 (£4,600,457) in 1933.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds on difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Burn and Buda Burn respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal Stakes in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Burn, a portion of Notu Burn, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Burn rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore,

including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The **Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

The production of iron ore in India rose from 699,931 tons in 1932 to 793,953 tons in 1933, with increases in the production of steel (including steel rails) from 430,333 tons in 1932 to 505,429 tons in 1933, and of ferro-manganese from 366 tons in 1932 to 7,725 tons in 1933. As in 1932, there was no production of pig-iron by the Bengal Iron Co., their output of products made from pig-iron in 1933 amounted to 12,511 tons of sleepers and chairs, and 23,263 tons of pipes and other castings, against 8,371 tons and 17,266 tons, respectively, in 1932. The Indian Iron Steel Co. increased their production of pig-iron from 198,700 tons in 1932 to 249,079 tons in 1933. The output of pig-iron by the Mysore Iron Works rose slightly from 14,683 tons in 1932 to 14,805 tons in 1933. The total production of pig-iron in India rose from 913,314 tons in 1932 to 1,057,837 tons in 1933.

Exports of pig-iron.—The increase in the production of pig-iron in India recorded above was accompanied by a rise in the quantity exported from 248,396 tons in 1932 to 372,015 tons in 1933. Japan is the principal consumer of Indian pig-iron, the proportion taken rose from 41·5 per cent in 1932 to 48·3 in 1933 whilst the actual amount rose by 76 per cent. There was also a large increase in exports to the United States of America of about 166 per cent. (44,973 tons) and an increase of 7,500 tons to China, with small decreases to the United Kingdom and Hongkong. The export value per ton of pig-iron fell from Rs. 34·8 (£2·62) in 1932 to Rs. 24·5 (£1·84) in 1933.

The Steel Industry (Production) Act 1924 (Act No. XIV of 1924).—Authorized, to companies employing Indians, bounties upon rails and fishplates wholly manufactured in British India from material wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March 1927: the industry is, however, protected to a certain extent by varying tariffs on different classes of imported steel. An Act is now before the Legislative Assembly proposing considerable modification of the tariffs.

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927.—Before the year 1926, the record production of manganese-ore in India took place in 1907, when 902,291 tons were raised. In 1926, the output rose to 1,011,928 tons, valued at £2,463,491 f.o.b. Indian ports, the rise in output was, however, accompanied by a decrease in value. In 1927 the production rose to the highest figure yet recorded, 1,120,353 tons, accompanied by a rise in value to the peak figure of £2,703,068 f.o.b. Indian ports. During the year 1928, the upward tendency was not maintained, the output falling to 978,449 tons valued at £2,198,895 f.o.b. Indian ports. In 1929, the output rose again slightly to 994,279 tons, but the value fell heavily to £1,571,030. In 1930 the output fell substantially to 829,946 tons with a heavy fall in value to £1,200,236. In 1931 a still more

serious fall took place, to 537,844 tons with a value of £726,954. This was followed by a disastrous fall in 1932 to 212,804 tons with a value of £140,022. In 1933 the output rose slightly to 218,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901, when the output was 120,801 tons valued at £122,831. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £929,546, whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one twenty-second part of the value of the 1927 production. In fact in none of the major Indian mineral industries have the effects of the slump been so seriously felt as in the manganese industry.

The slight increase in 1933 is due to increases in Sandur State (22,237 tons), Keonjhar State (15,499 tons), Vizagapatam (8,649 tons), and Singbhum (5,181 tons), with small outputs from Bonal State and Kurnool, largely balanced by decreases in the Central Provinces. In the Central Provinces the production fell from 302,344 tons in 1931 to 77,186 tons in 1932, and 28,789 tons in 1933, which is less than the output of 1900, the year in which the manganese industry commenced in the Central Provinces, when the output was 35,356 tons. During 1932 and 1933 the majority of mines in the Central Provinces were closed including several mines that had never been closed since the commencement of work in 1900 and 1901. There was a total cessation of production in the Nagpur district and almost total cessation in Bhandara.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 585,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaupazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to

year and reached 8,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. There was a trivial fall in the total Indian gold production from 330,488 8 ozs. valued at Rs. 2,08,01,913 (£1,540,885) in 1931 to 329,681 7 ozs. valued at Rs. 2,53,51,435 (£1,906,123) in 1932. In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,488 8 ozs. valued at Rs. 2,08,01,913 (£1,540,885), followed by a trivial fall again in 1932 when the output was 329,681 7 ozs. valued at Rs. 2,53,51,138 (£1,906,123). In 1933 there was an increase to 336,108 3 ozs. valued at Rs. 2,76,40,071 (£2,078,201). This is a result of the stimulus of the high price of gold, the value of the 1933 output being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921 which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722 6 ozs. The average number of persons employed on the Kolar Gold Field during 1933 was 20,263.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy Valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to 1886, prior to annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Baronge Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpypu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1888, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though

some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

The world's production of petroleum in 1926 amounted to nearly 150 million long tons, of which India contributed 0.72 per cent. In 1927, this figure jumped to some 172 million long tons, of which the Indian proportion, on a practically stationary production, fell to 0.64 per cent. In 1928 there was another substantial rise in the world's production, which reached the figure of over 181 million tons. In 1929, there was another jump to over 202 million tons, but in 1930 the world's production fell to about 193½ million tons, in 1931 to about 187 million tons, and in 1932 to about 179 million tons, whilst in 1933 the production rose again to about 198 million tons. Decreases were shown by Columbia, Trinidad, India, Germany, Egypt and Canada. All other important producers showed an increase in production, by far the largest amount being due to the United States. The United States contributed 62.5 per cent. of the world's supply in 1933, Russia 10.6 per cent. and Venezuela 8.3 per cent. In 1928, India contributed 0.64 per cent., which fell to 0.60 per cent. in 1929 and rose to 0.62 in 1930, 0.63 per cent. in 1931 and 0.64 per cent. in 1932, and fell again to 0.62 per cent. in 1933, her position on the list of petroleum producing countries fell from 11th in 1929 to 12th in 1930 to 1933, her place being taken by Trinidad.

The production of petroleum in India (including Burma) fell slightly from 308,606,031 gallons in 1932 to 306,000,022 gallons in 1933. The decrease in 1932 represents a considerable decrease in the output of Assam and the Punjab, and of a small proportionate decrease in the production of Burma. This decrease in output in 1933 was accompanied, however, by a large increase in value amounting to Rs 1,18,24,818 (£889,084), or 23.3 per cent., an increase much in excess of the decrease of 1932 brought about by the world depression.

The amount of petrol produced from natural gas during the year was 8,729,928 gallons, of which 8,172,197 gallons were produced in Burma and 557,731 gallons in the Punjab.

Amber, Graphite and Mica.—Amber is found in very small quantities in Burma. Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1929 was 39 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38,189 cwts. compared with 43,650 cwts. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was a marked rise in the declared production of mica from 32,713 cwts. valued at Rs. 14,35,401 (£107,925) in 1932 to 41,075 cwts. valued at Rs. 16,82,045 (£126,470) in 1933. As has been frequently pointed out, the output figures are incomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In the years 1926 and 1927 the export figure was approximately double the reported production figure, whilst in the years 1928 and 1929 the quantity exported was more than double the reported production. In 1930 the recorded exports were, however, only some 57 per cent in excess of the reported production, in 1931 36 per cent in 1932 43 per cent, and in 1933 some 45 per cent, in excess.

The United States of America and the United Kingdom, which are the principal importers of Indian mica, absorbed respectively 24.0 per cent and 47.6 per cent during 1932, and 34.3 per cent and 40.8 per cent during 1933. Germany took 10.6 per cent and 10.7 per cent respectively of the total quantities exported during the years 1932 and 1933. The average value of the exported mica decreased slightly from Rs. 71.2 (£5.4) per cwt. in 1932 to Rs. 70.7 (£5.8) per cwt. in 1933. The exports rose from 47,021 cwts. valued at Rs. 33,48,943 (£251,800) in 1932 to 57,717 cwts. valued at Rs. 40,92,033 (£307,671) in 1933. The value for 1932 is the lowest total value recorded since 1915-16 when the value of the mica exports was £208,496.

Tin, Copper, Silver and Lead.—Following a series of years of practically continuous increase, a slight decrease in the production of tin-ore in Burma was reported for the year 1931, during which the output amounted to 4,255.2 tons valued at Rs. 35,07,380. In 1932, however, there was again an increase in production to 4,525 tons valued at Rs. 45,09,995, and in 1933 to 4,980.4 tons valued at Rs. 70,89,994 (£533,082). This is the highest quantity and total value yet recorded in any one year. The considerable increase in the total value is, of course, mainly due to the rise in the price of the metal resulting from the tin restriction scheme in operation in the five leading tin-producing countries Malaya, Netherlands East Indies, Bolivia, Nigeria and Nam, a scheme to which India is not an adherent. The increase in output of some 435 tons is the balance of an increase from Mergui and Mawchi in the Southern Shan States and a decrease from Lavo. Milling operations were suspended at Mawchi in August 1927 pending the installation of additional plant and further development. Milling was resumed in February 1930 and this explains the large increases of 1930 to 1933.

The total figure for 1933 includes 1,738.5 tons from Mawchi, calculated to be the proportion of tin-ore in 3,050 tons of concentrates derived from mixed wolfram-scheelite-cassiterite-ore; these concentrates are assumed to contain 43 per cent of wolfram and 57 per cent of cassiterite. There was no reported output of block tin.

Imports of unwrought tin fell from 49,279 cwts. valued at Rs. 47,50,341 (£357,168) in 1932 to 41,655 cwts. valued at Rs. 52,96,454 (£398,230) in 1933; over 97 per cent. of these imports came from the Straits Settlements.

In contrast with the increase in the production of silver from the Bawdwin mines of Upper Burma, amounting to 1,400,291 ozs. recorded during the four years, 1925 to 1928, the following years 1929, 1930 and 1931 were marked by decreases amounting to 124,211 ozs., 226,311 ozs. and 1,153,806 ozs. respectively. In 1932 and 1933, however, there were small increases again, amounting to 98,556 ozs. and 53,504 ozs. respectively. These variations in quantity were accompanied by a small fall of value in 1929, marked falls in 1930 and 1931, and a marked rise in 1932, and a further rise in 1933. The output of silver obtained as a by-product from the Kolar gold mines of Mysore showed a fall of some 1,600 ozs. The amount of silver bullion and coin exported during the year was 58,328,890 ozs. valued at Rs. 7,00,38,590 (£5,266,059) as compared with 34,864,148 ozs. valued at Rs. 4,15,61,144 (£3,124,898) during 1932.

The production of lead-ore in the Burma Corporation's Bawdwin mines in Burma, in reversal of the downward trend since 1930, increased from 372,586 tons in 1932 to 454,791 tons in 1933, and the total amount of metal extracted from 71,202 tons of lead (including 842 tons of antimonial lead), valued at Rs. 1,09,95,587 (£828,736) in 1932 to 72,045 tons (including 1,485 tons of antimonial lead) valued at Rs. 1,15,61,915 (£899,317) in 1933. The quantity of silver extracted from the Bawdwin ores rose slightly from 5,998,956 ozs. valued at Rs. 62,32,915 (£468,640) in 1932 to 6,054,047 ozs. valued at Rs. 85,74,695 (£494,338) in 1933. The value of the lead per ton rose from Rs. 154.5 (£11.8) to Rs. 180.5 (£12.07) whilst the value of the silver per ounce rose from Rs. 1-0-7 (18.75d) to Rs. 1-1-5 (19.6d) in the year under review. The ore reserves in the Bawdwin mine as calculated on the 1st of July, 1933, totalled 4,133,792 tons, against 4,126,179 tons at the end of June, 1932, with an average composition of 25.5 per cent. of lead, 15.5 per cent. of zinc, 0.68 per cent. of copper, and 19.6 ozs. of silver per ton of lead. Included in this reserve are 37,000 tons of copper-ore. During the year development work in the Meingtha section, discovered in 1930, continued to yield satisfactory results.

Magnetite—The output of magnetite showed an increase of 1,342 tons, accompanied by an increase in value of Rs. 24,925 (£1,874). The increase was due to a large increase from Mysore State, partially balanced by a decrease in the output of the Salem district, Madras.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1918. The

production of zinc concentrates by the Burma Corporation, Limited, in the Northern Shan States, fell from 51,455 tons valued at Rs 17,23,528 in 1931 to 44,484 tons valued at Rs 15,09,298 in 1932. The slight rise in the value per ton is parallel with a similar rise in the price of spelter. The production of zinc concentrates by the Burma Corporation, Limited, in the Northern Shan States, rose to 61,432 tons valued at Rs. 30,82,944 (£231,800) recovering thereby nearly all the ground lost since 1928 (output 64,122 tons), though the value is still greatly below the value in the peak year namely £559,412, in 1928. The slight rise in the value per ton is parallel with a similar rise in the price of spelter. The exports during the year under review amounted to 64,050 tons valued at Rs 32,02,500 (£240,789) against 49,950 tons valued at Rs 24,97,500 (£187,782) in the preceding year.

Copper.—In 1931 the mine output was 153,636 long tons of copper-ore valued at Rs 22,71,940. 161,563 short tons of ore were treated for a production of 4,069 long tons of refined copper. 1,668 tons of this were sold in the Indian market at an average price of Rs 673 per ton. In addition there was a production of 3,637 tons of yellow metal, the average selling price in India being Rs 719 per ton.

Operations commenced on a revenue basis on January 1st, 1929. During that year the ore produced amounted to 76,831 long tons valued at Rs. 14,58,746 (£108,862). Of this 75,174 short tons were treated in the mill and smelter, with the production of 1,635 long tons of refined copper ingots and slabs. The copper was sold entirely in India at an average price of Rs. 1,200 per long ton. In 1930 the output increased to 123,749 long tons of copper-ore valued at Rs 24,35,571 (£180,413). Of this 134,162 short tons were treated in the mill and smelter and 1,625 short tons sent direct to the smelter with the production of 2,974 long tons of refined copper, of which 2,157 tons were sold in the Indian market and 540 tons were consumed in the new rolling mill, which was completed in July 1930, with the production of 712 tons of yellow metal (brass) sheets, which found a ready market in Calcutta.

Since then in spite of falling prices the production of both mine and smelter has continued to expand. In addition during 1933 there was an initial production of ore from Dhoiban where a lode parallel to that at Mosaboni is being opened up. During 1933 the mine output increased to 201,515 long tons of copper-ore from Mosaboni and 207 long tons from Dhoiban, making a total of 201,722 long tons, valued at Rs 22,12,968 (£166,388), against 175,010 long tons of copper ore in 1932 valued at Rs 25,09,080 (£188,652). 203,736 short tons of ore were treated in the mill and the production of refined copper amounted to 4,800 long tons against 3,413 tons in the previous year. 3,774 tons were consumed in the rolling mill and 1,317 tons were sold in the Indian market at an average price of Rs 599 per ton. Operations in the rolling mill resulted in the production of 6,143 long tons of yellow metal the whole of which was sold in India at an average price of Rs 631 per ton.

The total ore reserves at the close of the year 1933 amounted to 686,402 short tons with an average assay value of 3.06 per cent of copper

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, azate, corneilian, jadeite and amber. The production of diamonds in Central India rose from 1,254 carats valued at Rs 72,189 (£5,428) in 1932, to 2,342 carats valued at Rs 63,695 (£4,789) in 1933. Of this latter production 2,271 carats were produced in Panna State and the remainder in Charkhari, Ajaigarh, and Bilawar.

A severe decline in the output from the Mogok ruby mines of Upper Burma in 1924, followed in 1925 by a marked drop in value, bore witness to a serious decline in the industry. The Burma Ruby Mines, Limited, ultimately decided to go into liquidation, and the mines were offered for sale in September, 1926. The skeleton organisation left in charge of the mines, however, made good use of its opportunities with the result that the value of the output in 1926 exceeded that of the previous year by over a lakh of rupees. This encouraging result was effected by a rigorous economy and an extension of a system of co-operation with local miners, and was assisted by some good finds of sapphires in the Kyaungwin mine—the only one still worked by European methods.

During 1927, however, production fell in value by over 1½ lakhs of rupees, due mainly to a decrease in the value of the sapphires and spinels produced, there having been a slight increase in the value of the rubies. During 1928, there was another very large decline in value, amounting to over a lakh of rupees, due to a severe drop in the value of the sapphires produced as before. There was a slight increase in the value of the rubies. The value of the 1929 production was slightly above that of 1928, due to a considerable increase in the value of the rubies found, largely balanced by another large fall in the value of sapphires produced. In 1930 there was a further substantial fall in production and in total value, though the value per carat of the sapphires produced is the highest recorded for many years. Judging from reports in the *Rangoon Times* this is due to the opening up by the Burma Ruby Mines, Ltd., of the new Pagoda mine at Kathe leading to the find of a fine sapphire of 630 carats and a star sapphire of 293 carats. The find of a ruby of 100 carats was also reported.

Since the liquidation of the Burma Ruby Mines, Limited, and the final cessation of the operations of this company in 1931, reliable statistics of production of gem stones in the Mogok Stone Tract have been unobtainable. Work is still continued by local miners but of this no statistics are available. In addition a certain amount of work is being done under extraordinary licenses. For 1932 no returns are available except that a fine ruby of 17 carats was found at Chaunggyi near Mogok, and a fine sapphire of about 90 carats and a good star sapphire of 473 carats were mined at Kathe. For 1933 the only return is of 1,103 carats of rubies from Kathe.

In addition the production was reported from Udhampur, Kashmir State of 25,100 tons (1,434,285 carats) of sapphire with corundum valued at Rs 92,000 (£6,917). The sapphire deposits of Kashmir have long been known, but on account of their high altitude they are worked only occasionally.

SALT.

There was a substantial increase in the total output of salt, amounting to some 102,000 tons, shared by Madras (43,954 tons), Northern India (10,860 tons), Aden (16,888 tons), Burma (10,705 tons), and Bombay and Sind (10,124 tons.) Imports of salt into India decreased largely by 155,923 tons, all the countries of origin showing decreases excepting Germany

Quantity and Value of Salt produced in India during the years 1932 and 1933

Bibliography.—Report of the Chief Inspector of Mines in India, under the Indian Mines Act (VIII of 1901) for 1930, by the Chief Inspector of Mines. Report on the Mineral Production of India during 1929 by L. Leigh Fermor, Officiating Director, Geological Survey of India. Note on the Mineral

Production of Burma in 1922. Monographs on Mineral Resources published by the Imperial Institute. Quinquennial Review of the Mineral Production of India for the years 1924-1928. (Records of the Geological Survey of India, Vol. LXIV).

Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to stop business in times of emergencies. The official address

of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 11,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the **Bombay Stock**

Exchange, Ltd. This separate Exchange no longer functions it was revived in 1922. It has ceased to function again.

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, however, adopted the minority report which leaves the constitution and practice of the Exchange very little modified.

In the middle of the year 1925 there was heavy speculation in certain mill scrips. The market was tremendously oversold, the usual crisis ensued, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted new draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the **Calcutta Share Market** met in the open air in business quarters and was under no control except that of market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 300 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is 608. The Committee has restricted the further sale of new shares until it deems it necessary to

revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone to become a member is required to purchase a share from a member and the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is controlled by bye-laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures.

A general meeting of the shareholders annually elects a Committee which elects several Sub-Committees and Hony. Office Bearers—the President, two Joint Hony. Treasurers and the Hony. Secretary. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hony. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1935—J. R. Coulthard, Esq., President, J. N. Haywood, Esq., G. C. Montgomery, Esq., O. A. Cohen, Esq. Sarbotoosh Sen, Esq., Jitendra Mohan Dutt, Esq., M.Sc., Goralall Seal, Esq., Shambhu Nath Dutt, Esq., Gobind Lall Bangur, Esq., Mahaliram Sonthalia, Esq., Bassant Lall Chaturvedi, Esq., Jagannath Jhunjhunwala, Esq., Bishambhar Nath Chaturvedi, Esq., B.A., LL.B., Mokandall, Esq.

Joint Honorary Treasurers—Goralall Seal, Esq., Mahaliram Sonthalia, Esq.

Honorary Secretary—Satya Ranjan Mitra, Esq., B.A., B.L.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July, 1923, by Sir Stanley Jackson, the Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. This floor also contains the offices of the Association, a well equipped library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The **Madras Stock Exchange** situated at No. 9 Broadway consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership card of Rs. 1,000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs. 3,000.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhai Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhai's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at

the opening of the proceedings and the first business was the election of Sir Fazulbhai Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress.—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are —

- (1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.
- (2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.
- (3) To organize Chambers of Commerce Commercial Associations or Bodies in different trade centres of the Country.
- (4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings . . . may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary . . ."

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of

warrants, debentures and other negotiable or transferable instruments or securities.

- The Rules provide for two classes of members, viz., numbers consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150).

The following are the Committee of the Federation for 1935 —

President.—Lala Padampat Singhania.

Vice-President—Mr. D P Khaitan

Members of the Committee—Kasturibhai Lalbhai (Ahmedabad), Millowners' Association (Ahmedabad), Mr. G. D. Birla (Indian Chamber of Commerce, Calcutta), Sir Puri-botadmas Thakurdas, Kt., C.I.E., M.B.E., (Indian Salt Association, Bombay), Mr. Manu Subedar (Indian Merchants' Chamber, Bombay), Mr. A. D. Shroff (Indian Merchants' Chamber, Bombay), Lala Shri Ram (Delhi Factory-owners' Federation, Delhi), Seth Walchand Hirchand (Maharashtra Chamber of Commerce, Bombay), Mr. Nalini Ranjan Sarkar (Jengal National Chamber of Commerce, Calcutta), Mr. Chinnulal B. Mehta (Bombay Bullion Exchange, Bombay), Mr. M. J. Dabhanekar (Maharashtra Chamber of Commerce, Bombay), Lala Ramdas Vishvya (Gwalior Chamber of Commerce, Lashkar) and Lt. Sardar P. S. Sodhbans (Indian Chamber of Commerce, Lahore)

Honorary Treasurers—Mr D P Khaitan (Indian Chamber of Commerce, Calcutta), and Sir Hari Sanker Paul, Kt., MLC (Bengal National Chamber of Commerce, Calcutta)

Co-opted Members—Mr S M Basur, Cawnpore, Pandit K Santanam, Lahore, Mr M. Muhammad Ismail, Madras, Mr B Das, M.L.A., Cuttack, Mr A L Ojha, Calcutta and Mr Hoshang N D Dinshaw, Karachi.

Secretary—Mr D G Mulhekar.

Office address—Kamla Tower, Cawnpore.

Telegraphic address—Unicomind, Cawnpore

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwarli Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members Permanent (Chamber and Associate) and Honorary.

companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1933-34.—

President—Mr. J. S. Henderson, (Messrs Mackinnon, Mackenzie & Co.)

Vice-President.—Mr. J. Reid Kay, (Messrs. James Finlay & Co., Ltd.)

Members.—Mr. Alec Alkman, (Messrs. Andrew Yule & Co.), Mr. H. F. Bateman, (Messrs. Shaw, Wallace & Co.), The Hon'ble Sir E. C. Benthall, (Messrs. Bird & Co.), Mr. R. D. Cromartie, (The Mercantile Bank of India, Ltd.), Mr. H. A. M. Hannay, (Agent, Eastern Bengal Railway), Mr. L. V. Heathcote, (The Burma-Shell Oil Storage & Distributing Co. of India, Ltd.), Mr. R. A. Towler, (Messrs. McLeod & Co.)

The Secretary of the Chamber is Mr. A. C. Daniel. Assistant Secretary, Mr. D. C. Fairbairn.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council of State—The Hon'ble Mr. S. D. Gladstone.

The Bengal Legislative Council—Mr. F. T. Roman (Cal. Electric Supply Corporation Ltd.), T. Lamb (Begg Dunlop & Co. Ltd.), H. G. Cooper (Burma-Shell Oil Storage and Distributing Co. of India Ltd.), Mr. G. W. Leeson (Macneil & Co.), Mr. W. H. Thompson, (Bengal Telephone), Mr. Henry Birkenmyre, (Birkenmyre Brothers).

The Calcutta Port Trust—Mr. M. A. Hughes, (Turner Morrison & Co., Ltd.), Mr. W. Hunter (Hillanders Arbuthnot & Co.), Mr. G. R. Campbell, Mackinnon, (Mackenzie & Co., Ltd.), Mr. A. L. B. Tucker, (Kilburn & Co.), Mr. K. J. Nicolson, (Gladstone, Wyllie & Co.), Mr. J. Reid Kay, (James Finlay & Co., Ltd.).

The Calcutta Municipal Corporation—Mr. T. Rooney, (Bengal Telephone Co., Ltd.), Mr. F. W. Leake (British Insulated Cables Ltd.), Mr. W. T. Vizar Harmer (Bengal Iron Co., Ltd.), J. D. Sadler (India General Navigation and Railway Co., Ltd.), Mr. C. H. Holmes, (Holmes Wilson & Co., Ltd.), Mr. K. G. Sillar, (Calcutta Electric Supply Corporation Ltd.).

The Board of Trustees for the Improvement of Calcutta—Mr. W. H. Thompson, M.L.C. (Bengal Telephone Co., Ltd.).

The Bengal Boiler Commission—Mr. W. Gow, (Bain & Co., Ltd.), Mr. H. H. Reynolds, M.I.E. (Ind.), M.I.E.E., Mr. J. Williamson, M.I.E. (Ind.), M.I.E.E.

The Bengal Smoke Nuisances Commission—Mr. E. J. R. Gardiner, Mr. G. Y. Robertson.

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and

to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce—

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Fire Insurance Association, Calcutta Import Trade Association, Calcutta Marine Insurance Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabric Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers Association, Calcutta Hides and Skins Shippers' Association, Calcutta Sugar Importers' Association, Calcutta Accident Insurance Association, Calcutta Flour Mills' Association, Calcutta River Transport Association, and the Masters' Stevedores' Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers' Department controlled by a special committee. It includes a Superintendent (Mr. R. Ellis), Head Office Manager (Mr. C. G. Smyth) and Assistant Superintendents (Messrs. J. G. Smyth, G. C. G. Smyth, J. B. F. Henfrey and B. Perry), and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are

engaged or concerned, to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians, to watch over and protect the general commercial

interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta, and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofussil. The local Members pay an annual subscription of Rs. 100 and the Mofussil members Rs. 50. Merchants, Bankers, Ship-owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1934-35—

President—Mr. Kanai Lal Jaitia

Senior Vice-President—Mr. J. P. Dutta

Vice-President—Mr. Mohanlal Lallchand.

Members—G. D. Birla, Mr. D. P. Khaitan; Mr. S. K. Bhatter, Mr. Fazlulla Gangjee, Mr. G. L. Mehta, Mr. M. K. Powdjal, Mr. N. L. Pun, Mr. K. J. Purohit, Mr. C. K. Parekh, Mr. Anandji Haridas, Mr. H. P. Bagaria; Mr. Kassim A. Mohamed, Mr. Habib Mohamed, Mr. Kedarnath Khandelwal, and Dr. M. Sanjyal.

Secretary—Mr. M. P. Gandhi, M.A., F.R.S., F.S.S.

Honorary Treasurer.—Mr R. L. Nopany.

Secretary.—Mr J. K. Mehta.

Assistant Secretary.—A. C. Ramalingham.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns, the number of Chamber members is 186. Of these numbers 20 represent banking institutions, 11 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 12 insurance companies, 17 engineers and contractors, 130 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor

by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies—

The Council of State, one representative.

Legislative Council of the Governor of Bombay, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1935-36 and their representatives on the various public bodies:—

President—Sir John Abercrombie, Kt, M. C.

Vice-President—W. G. Lely, Esq.

Committee—G. H. Cooke, Esq., E. H. Culling, Esq., J. J. Flockhart, Esq., S. Fuchsmann, Esq., J. R. N. Graham, Esq., V. C. W. M. Petrie, Esq., E. C. Reid, Esq., M. C.

Secretary.—R. J. F. Sullivan, Esq.

Asst. Secretary.—H. Royal, Esq.

Halsall, Esq.**Bombay Telephone Company, Ltd.** W. G. Lely, Esq.**Railway Rates Advisory Committee.** G. C. R. Coleridge, Esq., L. A. Halsall, Esq., J. F. Macdonell, Esq.; The Hon. Mr. E. Miller, C. J. Damala, Esq.**Government of Bombay Road Board:** G. H. Cooke, Esq.**Bombay University:** G. L. Winterbotham, Esq., M.L.C.**Special Work.**

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in this certificate the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy

season are on duty early and late. The certificates granted show the following details:—

- (a) The date, hour and place of measurement.
- (b) the name of the shipper;
- (c) the name of the vessel;
- (d) the port of destination;
- (e) the number and description of packages;
- (f) the marks;
- (g) the measurement, and in the case of goods shipped by boats;
- (h) the registered number of the boat;
- (i) the name of the tindal.

Certificates of weight and of origin are also issued by the Chamber.

Associated Chamber of Commerce of India

HEAD OFFICE LOCATED IN CALCUTTA FOR 1935.

President: The Hon. Mr G R Campbell.

Millowners' Association, Bombay.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June 1924, as a Company limited by guarantee. The registered office of the Association is located in Patel House, Churchgate Street, Fort, Bombay.

The objects of the Association are:—

(a) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (b) the insurance of members of the Company against loss or damage by or incidental to fire, lightning, etc.; and (c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counterinsurances and counter-guarantees, etc., etc., etc.

The Association consisted of 56 members on 1st October, 1934.

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are:—

Mr. A. Geddis (*Chairman*).

Sir Ness Wadia, K.B.E., C.I.E., Sir Joseph Kay, Kt., Sir Chunilal V. Mehta, K.C.S.I., Batansi D. Morari, Esq., S. D. Saklatvala, Esq., F. Stones, Esq., O.B.E., H. J. Ramji, Esq. and A. C. M. Cursetjee, Esq., M.A., LL.B., Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

- (a) To encourage friendly feeling and unanimity among business community on all subjects connected with the common good of Indian merchants.
- (b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.
- (c) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.
- (d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.
- (e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies and in general to take the initiative to secure the welfare of the business community in all respects.
- (f) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.
- (g) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.
- (h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.

- (i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.
- (j) To secure the interests and well-being of the Indian business communities abroad.
- (k) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.
- (l) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.
- (m) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.
- (n) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.
- (o) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

There are three classes of members:—

(1) Ordinary, (2) Patrons and (3) Honorary.

(1) There are three classes of ordinary members:—

- (a)—Residents of Bombay and its suburbs who will have to pay Rs. 75 as annual subscription; but joint stock Companies will have to pay Rs. 100 per year.
- (b)—Mofussil members who will have to pay Rs. 25 as annual subscription.
- (c)—Associations which will have to pay Rs. 125 as annual subscription.

Admission Fee :—All the ordinary members and patrons pay Rs. 50 as admission fee which is credited to a capital fund of the Chamber and not expended on revenue account except with the consent of the general body.

- (2) Patrons:—Indian firms or individual Indian merchants can join as Patrons. Firms will have to pay Rs. 5,000 and individuals Rs. 2,500 as donation, the proceeds of which will be credited to a capital fund which shall not be expended on revenue account but the interest whereof shall be taken to revenue account.

- (3) **Honorary members**.—Gentlemen distinguished for public services or eminent in commerce and manufactures or otherwise interested in the aims and objects of the Chamber may be elected as Honorary members by a General Meeting of the Chamber on the recommendation of the Committee and as such shall be exempted from paying subscriptions. They shall not be entitled to vote at any meeting of the Chamber nor shall they be eligible to serve on the Committee.

Any Indian gentleman, firm or association engaged in mercantile pursuits or interested in trade and commerce desirous of joining the Chambers shall be eligible for membership.

The subscription to the Chamber's periodical returns is at present fixed at Rs 10 per month for the Daily Trade Return & Rs. 10 per annum for the Weekly Price Current and Market Report. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, four representatives on the Karachi Port Trust, two on the Karachi Municipality and two on the North Western Railway Advisory Committee, Karachi. There were 64 members of the Chamber in January 1935. The following were the officers in 1934 —

Chairman Mr H. S. Bigg-Wither, O.B.E. (Burmah-Shell Oil Storage and Distributing Co., of India, Ltd.)

Vice-Chairman Mr J. W. Anderson (Grahams Trading Co (India) Ltd)

Members of Committee — Mr A. D. Finney (Mackinnon Mackenzie & Co.), Mr A. K. Homan (North Western Railway), Mr A. S. Miculachi, (Ralli Brothers, Ltd.), Mr G. N. R. Morgan (Bombay Co Ltd), Mr. G. H. Raschen (Forbes, Forbes, Campbell & Co, Ltd), Mr J. Reid, (David Sassoon & Co, Ltd), Mr J. Richardson (National Bank of India,

Ltd); and Mr. E. Schwarz (Volkart Brothers).

Representatives on the Bombay Legislative Council: Mr. J. Humphrey, O.B.E.

Representatives on the Karachi Port Trust.

Messrs H S Bigg-Wither, O.B.E., G. H. Raschen, J. W. Anderson and W. D. Young

Representatives on the Karachi Municipality.

Mr A. W. Hutton, O.B.E., M.C., and Mr W. F. Enever

Representatives on the North Western Railway

Local Advisory Committee, Karachi: Messrs G. H. Raschen and L. Reid.

Ag Secretary — Mr H. M. Gomes

Ag Public Measurer — Mr. J. G. Smith.

The following are the principal ways in which the Chamber gives special assistance to members:—The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers' finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber — Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 58 members and 8 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows —

Chairman — Sir William Wright, O.B.E.,

Vice-Chairman — Mr W. H. Ruddle

Committee — Mr G. A. Bambridge, Mr H. N. Colam, Mr G. L. Orchard, Mr D. M. Reid.

The following are bodies to which the Chamber is entitled to elect representatives and the representatives elected for the year. —

Madras Legislative Council — Mr F. Birley, M.L.C.

Madras Port Trust — Messrs. F. Birley, M.L.C.,

G. A. Bambridge, W. M. Browning, G. H. Hodgson

Corporation of Madras — Messrs A. J. Powell, D. B. Scott, W. T. Williams

Federation of Chamber of Commerce of the British Empire: Vacant.

Secretary G. Gompertz.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber registers trade marks, holds survey and arbitrations, and issues certificates of origin.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body. Under the Madras City Municipal Act, 1919, the

Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Road Board, the Town Planning Trust, the Provincial Cotton Committee, Vizagapatam Harbour Works Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Government Institute of Commerce Advisory Council, Madras, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rayapuram and Ophthalmic Hospital and Madras Electric Supply and Tramways Advisory Committee, Income-tax Board of Referees, and Indian Institute of Accountants.

The Chamber has 435 members on the roll and has its own building. Several Associations in the City of Madras and Chambers of Commerce Upcountry have been affiliated to this Chamber.

President.—Dewan Bahadur Govindas Chahoorbhajadas.

Vice-Presidents.—Mr. Jamal Mahomed Sahib and Kumararajah M. A. Muthiah Chettiar of Chettinad.

Honorary Secretaries.—Khan Bahadur Adam Hajeer Mahomed, Sait and Rao Sahib C. Jayaram Naidu.

Tel. Address.—"Commerce."

Telephone.—2237.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member resident or carrying on business in Cawnpore, Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 61 members, two honorary members and seven affiliated members.

The following are the officers.—

Upper India Chamber of Commerce Committee—

President—Mr T Gavin Jones, M L C, (The Cawnpore Chemical Works Ltd.) *Vice-President*—Mr. G. V. Lewis, (The British India Corporation, Ltd.) *Members*—Mr K. J. D. Advisory Committee constituted under the Auxiliary Force Act, 1920.—C. F. Pyett, Esq.

COCANADA.

The Cocanada Chamber of Commerce was established on 20th October 1868.

The following are the members of the Chamber which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras:—

Members.—The Coromandel Co., Ltd., Ripley & Co., Gordon Woodroffe & Co. (Madras), Ltd., Innes & Co., Wilson & Co., Northern

Circars Development Co., Burmah-Shell Oil Storage and Distributing Co. of India Ltd., and The Agent, Imperial Bank of India.

MEMBERS OF THE COMMITTEE.

Mr. S. A. Cheesman, (Chairman).

„ H. F. Ferguson.

„ C. C. B. Reynolds.

„ G. M. Lake, (Secretary).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 8 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All-India statistics.

For some time past the Government of India have felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they have recently established the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. The Director-General is now stationed at the headquarters of the Government of India with a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics at Calcutta and a new Deputy Director of Statistical Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes: Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (a) information as to tariff change in foreign countries which affect Indian interests (b) notices of tenders called for and contracts placed by Government departments and public bodies, (c) crop reports and forecasts, (d) Government orders, communiques and other

notifications affecting trade, (e) analysis of Indian trade statistics, (f) market reports, prices and trade movements of the staple exports and imports, (g) trade enquiries for securing trade introductions, (h) summaries of the leading features of consular and other trade reports, and (i) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 15,337 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 800 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London and Hamburg with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world; who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Sir (then Mr.) Thomas M. Ainscough, O.B.E., was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year. For five years, owing to the pressing need for economy in the Public Service, he was singlehanded in covering this vast territory. In 1923, however, H.M.'s Government sanctioned the opening of an office in Bombay and the creation of an additional Trade Commissioner's post in Calcutta. Mr. W. D. M. Clarke holds the appointment of H.M.'s Trade Commissioner at Bombay and in 1935 Mr. A. Schofield was appointed as H.M.'s Trade Commissioner at Calcutta. The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politico-economic problems which are becoming so important in view of the changing political conditions in India.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter

into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions and prospects of trade in his area; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department, to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area, and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in voicing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial training and experience who have acquired some reputation in their respective spheres, and a comprehensive and businesslike organization has been built up at the Department of Overseas Trade, London, to deal with the information sent home. It now rests with the British mercantile community, both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods, conditions of trade, etc., as they are able to afford.

H. M.'s TRADE COMMISSIONERS IN INDIA.**Calcutta—**

Sir Thomas M. Ainscough, C.B.E.,

His Majesty's Senior Trade Commissioner
in India and Ceylon.

Mr. A. Schofield,

His Majesty's Trade Commissioner at
Calcutta.Post Box No. 683, Fairlie House, Fairlie
Place.Telegraphic Address—"Tradcom, Cal-
cutta."

Ceylon—

Imperial Trade Correspondent,

The Principal Collector of Customs,
Colombo.**THE INDIAN CENTRAL COTTON COMMITTEE.**

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows.—

President—Dewan Bahadur Sir T. Vijayaraghavacharya, K.B.E., Vice-Chairman, Imperial Council of Agricultural Research, *ex-officio*.

(a) The Expert Adviser to the Imperial Council of Agricultural Research in Agricultural matters, *ex-officio*.

REPRESENTATIVES OF AGRICULTURAL DEPARTMENTS

Madras—Mr S. V. Ramamurthy, I.C.S., Director of Agriculture

Bombay—The Director of Agriculture

United Provinces—Mr R. G. Allan, I.A.S., Director of Agriculture

Punjab—The Director of Agriculture

Central Provinces—Mr J. H. Ritchie, I.A.S., Director of Agriculture.

Burma—Mr F. D. Odell, I.A.S., Deputy Director of Agriculture, West Central Circle, Magwe

Director-General of Commercial Intelligence and Statistics, *ex-officio*

REPRESENTATIVES OF CHAMBERS OF COMMERCE & ASSOCIATIONS.

The East India Cotton Association, Sir Purshotamdas Thakurdas, Kt, C.I.E., M.B.E. (*Vice-President*)

The Bombay Millowners' Association, Mr. S. D. Saklatvala.

The Bombay Chamber of Commerce, Mr. H. B. Moore.

The Indian Merchants' Chamber, Mr. Chunilal B. Mehta.

The Karachi Chamber of Commerce, Mr. F. G Travers.

The Ahmedabad Millowners' Association, Seth Sakarlal Balabhai

The Tuticorin Chamber of Commerce, Mr. J. Vonesch.

The Upper India Chamber of Commerce, Mr F. J. W. Plummer.

The Empire Cotton Growing Corporation, Mr W. Roberts, G. E

COMMERCIAL REPRESENTATIVES NOMINATED BY LOCAL GOVERNMENTS.

Central Provinces—Mr Y G Deshpande, Rao Bahadur G. R. Kothare, M L O

Madras—Mr J Nuttall

Punjab—Khan Bahadur Sirdar Habibullah, M L O.

Bengal—Mr. Akhil Bandhu Guha.

CO-OPERATIVE BANKING REPRESENTATIVE

Rao Bahadur M. G. Deshpande, CBE.

REPRESENTATIVES OF COTTON-GROWING INDUSTRY

Madras—Mr K S Ramaswami Gownder, Mr R. Ry K. Sarabha Reddi Garu

Bombay—Sardar Rao Bahadur Bhimbhai Ranchodji Naik, M L O, Rao Bahadur Chennabasappa Shidramappa Shirahatti.

United Provinces—Khan Bahadur Shah Nazari Hussain, M L O. Rao Bahadur Lala Anand Sarup, M L O.

Punjab—Sardar Sampuran Singh, M L O. Mian Nurullah, M L O.

Central Provinces and Berar—Mr. N. M. Deshmukh, Mr J. B. Deshmukh

REPRESENTATIVES OF INDIAN STATES

Hyderabad State.—Mr Nizam-ud-din Hyder, Director of Agriculture

Baroda State.—Mr. C. V. Sane, Director of Agriculture.

Gwalior State—Mr. H. H. Pandya, Agricultural Adviser.

Rajputana and Central India States—Mr F K Jackson, Director, Institute of Plant Industry, Indore.

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR-GENERAL-IN-COUNCIL.

Mr. D. N. Mahta, Economic Botanist for Cotton, Central Provinces.

Mr. S. S. Salmath, Deputy Director of Agriculture, Southern Division, Dharwar.

M. R. Ry V. Ramanatha Iyer, Avl, Cotton Specialist, Coimbatore

Musahib-i-khas Bahadur S. V. Kanungo, Finance Minister, Representative of the Indore State

Mr. W. J. Jenkins, I A S, Chief Agricultural Officer in Sind

Seth Isserdas Valindmal, Representative of the Karachi Indian Merchants' Association

Mr P. B. Richards, I A S, Entomologist to Government, United Provinces, Cawnpore

Khan Bahadur Nawab Fazl-i-Ali Khan, Chairman, District Board and President, Central Co-operative Bank, Ltd, Gujrat (Punjab).

Khan Saheb Farrukhbeg Sadikalbeg Mirza, Nawabshah, Sind

Lala Shri Ram, Representative of the Cotton Millowners' of Delhi

A. K. Yegua Narayan Iyer, Director of Agriculture, Mysore State, Bangalore.

Mr Chellaram Shewaram, Representative of the Karachi Cotton Association Ltd.

Secretary.—Mr. P. H. Rama Reddi, I A S.

Deputy Secretary—Vacant.

Publicity Officer.—Mr. R. D. Miha.

Director, Technological Laboratory.—Dr. Nazir Ahmad.

Office.—Vulcan House, Nicol Road, Ballard Estate, Bombay.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and the Central Provinces and of the Baroda, Rajpipla, Chhota Udepur, Hyderabad, Indore, and Sangli States and with excellent results.

The Cotton Ginning and Pressing Factories Act (XII of 1925) subsequently passed provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing, and the effect of "pools" of cotton ginning and pressing factories on the price paid to the growers for their produce. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of medium staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cottongrowing industry, thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian

Universities to undertake research on cotton problems under the direction of experienced research workers in India. Scholarships for training abroad are also sometimes granted.

Statistics.—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to (1) Indian raw cotton consumed in spinning mills in India, (2) exports by sea and receipts at mills of Indian cotton classified by varieties, (3) stocks of cotton held on the last day of the season by the trade at important cotton centres in India, and by the mills, and (4) loose cotton received in the spinning mills of the major cotton growing provinces, the establishment of weekly statistical returns relating to the number of bales of raw cotton pressed in India, and the revival of rail-borne trade statistics for cotton are some of the results already achieved by the Committee in this direction.

Research.—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental, spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants-in-aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number twenty-eight.

The Committee also assists by means of grants to Agricultural Reports in Provinces and States and to Co-operative Cotton Sale Societies in the wider distribution of seed of improved varieties of cotton. There are 16 such schemes in operation at present.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Mucadams' Association Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.O.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October 1932. With effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows—

Sir Purshotamdas Thakurdas, Kt. C.I.E. M.B.E., (President), Sellers' Panel, Haridas Madhavdas Esq., (Vice President), Sellers' Panel, Ramulvas Ramnarain, Esq., Buyers' Panel, J. O. G. Barnes, Esq., Buyers' Panel, J. Vonesh, Esq., Buyers' Panel, Ahmed Habib Esq., Buyers' Panel, Chimanlal B. Parikh, Esq., Sellers' Panel, Hansraj Jeewandas, Esq., Sellers' Panel, Fatechand Jhunjunwala Esq., Sellers' Panel, Bagraj Gupta, Esq., Brokers' Panel, Chhuni Lal B. Mehta, Esq., Brokers' Panel, Jagjiwandass Dossabhai, Esq., Brokers' Panel, Ramdeo Anandilal Podar, Esq., Brokers' Panel, Hargovindas Jeewandas, Esq., Brokers' Panel, Chhimanlal R. Loyalka, Esq., Brokers' Panel, N. M. Deshmukh, Esq., M.A. (Cantab.), Brokers' Panel, Bar-at-Law, Brokers' Panel, Mian Nurullah, Esq., M.L.C., Brokers' Panel, Sardar Rao Bahadur Bihimbhai R. Naik, M.L.C., Growers' Representatives nominated by the Indian Central Cotton Committee: Rao Bahadur C. S. Shihrahatti, Behramstiah K. Bharucha, Esq., Growers' Representatives nominated by the Government of Bombay.

Officers

D. Mehta, Esq., B.A., Secretary, C. M. Parikh, Esq., B. Com., Assistant Secretary, A. R. Meneses, Esq., Manager, Clearing House.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange, to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade; to establish just and equitable principles in the said Trade; to maintain uniformity of control of the said trade, to fix or adopt standards of classification of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or aid in bringing, prosecuting, or defending any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association, and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 391 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and

induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1933-34 the total area in all territories reported on was computed at 23,739,000 acres and the total estimated outturn was 4,970,000 bales of 400 lbs. as compared with 22,588,000 acres and 4,516,000 bales in 1932-33.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop:—

Provinces and States.	1932-33 (Provisional Estimates).		1933-34 (Provisional Estimates).	
	Acres in Thousands	Bales of 400 lbs (In thousands)	Acres in Thousands	Bales of 400 lbs (In thousands)

Bombay is the great centre of the cotton trade. The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Colabatores and Tinnevellys. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the

whole output, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years :—

	1930-31	1931-32	1932-33	1933-34.
BRITISH INDIA				
Bombay Presidency	475,944,062	549,038,671	558,504,709	484,714,674

FOREIGN TERRITORY				
Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwalior (Ujjain), Kishan-garh, Cambay, Kolhapur, Cochin Rajkot, Ratlam (a) and the French Settlements at Pondicherry	113,613,312	118,247,364	130,649,685	124,349,193
GRAND TOTAL ..	867,278,562	966,373,020	1,016,421,864	921,060,983

(a) Figures for Ratlam are being reported from April 1932

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 58 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 20.8 per cent. while Bengal and the Central Provinces produced 4.3 and 4.6 per cent. Elsewhere the production is as yet very limited.

BOMBAY ISLAND.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island :—

—	1928-29.	1929-30.	1930-31.	1931-32.	1932-33.	1933-34.

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produced in 1933-34 nearly 64·4 per cent of the cloth woven in India. The United Provinces produced 7·3 per cent., the Central Provinces 2·9 per cent. and Madras 3·1 per cent. Grey and Bleached goods represent nearly 76·7 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:—

	1929-30.	1930-31.	1931-32.	1932-33.	1933-34.
Grey and Bleached piece-goods—					
Pounds ..	421,758,613	460,325,143	520,016,204	531,791,526	495,794,794
Yards ..	1,814,920,801	2,003,490,240	2,311,104,465	2,422,997,054	2,264,994,899
Coloured piece-goods—					
Pounds ..	125,858,886	117,518,225	138,621,286	150,723,943	137,610,496
Yards ..	604,059,124	557,842,795	678,786,696	746,901,445	680,056,523
Grey and coloured goods other than piece-goods—					
Pounds ..	4,536,020	3,178,666	3,237,696	3,542,246	3,391,961
Dozens ..	1,164,778	779,365	831,344	946,971	841,758
Hosiery—					
Pound ..	1,923,016	1,667,834	1,974,144	2,544,339	2,193,217
Dozens ..	576,353	499,933	622,360	746,341	667,600
Miscellaneous—					
Pounds ..	4,635,744	4,225,198	5,362,410	4,291,948	4,863,953
Cotton goods mixed with silk or wool—					
Pound ..	3,360,526	3,443,498	3,045,221	2,007,004	1,859,114
Total—

BOMBAY PRESIDENCY WOVEN GOODS.

The output of woven goods during the three years in the Bombay Presidency was as follows:—

The weight (in pounds represents the weight of all woven goods; the measure in yards represents the equivalent of the weight of the grey and coloured piece-goods.)

	1929-30.	1930-31.	1931-32.	1932-33.	1933-34.
Pounds	376,413,138	392,057,330	459,247,935	462,222,027	415,072,223
Yards	1,724,925,196	1,829,793,378	2,186,300,219	2,265,897,230	2,024,533,240
Dozens	960,219	531,704	656,462	698,700	506,611

The grand totals for all India are as follows:—

	1929-30.	1930-31.	1931-32.	1932-33.	1933-34.
Pounds	562,058,731	590,336,923	672,256,961	694,901,056	645,713,715
Yards	2,418,979,925	2,661,133,035	2,989,991,101	3,169,898,499	2,945,051,727
Dozens	1,737,182	1,272,541	1,453,704	1,693,312	1,509,358

Progress of the Mill Industry.

The following statement shows the progress of the Mill Industry in the whole of India.

Years ending 30th June.	Number of Mills.	Number of Spindles.	Number of Looms.	Average No of Hands Employed Daily.	Approximate Quantity of Cotton Consumed.	
					Cwts.	Bales of 392 lbs.
1878	53	12,89,706	10,538	Not stated.	Not stated.	Not stated.
1879	56	14,52,794	13,018	42,914	9,36,547	2,67,585

* Year ending 31st August.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of reha, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gourpore, Serajunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore

Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Bellaghata-Barnagore branch mill), Kustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on a lot of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next two years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Kustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatti, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gourpore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,100 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kankarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,400 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khaddar, Gondopara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajunge), and the Kinnlaon. A lull of four years witnessed large extensions to the existing mills after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Najhati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hukumchand, Birla, Shree Hanuman, Gagalbhai, Premchand and Agapara Mills, which—with the exception of the last-named—are under Indian ownership.

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews **quinquennial averages** from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1931-32 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 :—

		Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
				Persons employed daily (average)	Looms.	Spindles.
Average—						
1879-80 to 1883-84	..	21 (100)	270.7 (100)	38.8 (100)	5.5 (100)	88 (100)
1884-85 to 1888-89	..	24 (114)	341.6 (126)	52.7 (136)	7 (127)	133.4 (157)
1889-90 to 1893-94	..	26 (124)	402.6 (149)	64.3 (166)	8.3 (151)	172.6 (196)
1894-95 to 1898-99	..	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (274)
1899-1900 to 1903-04	..	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (380)
1904-05 to 1908-09	..	46 (219)	960 (355)	165 (425)	24.8 (451)	510.5 (580)
1909-10 to 1913-14	..	60 (286)	1,209 (443)	208.4 (537)	33.5 (609)	691.8 (786)
1914-15 to 1918-19	..	73 (348)	1,403.6 (519)	259.3 (668)	39.7 (722)	821.2 (931)
1917-18	..	76 (362)	1,428.5 (528)	266 (686)	40.6 (788)	834 (946)

* Revised.

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84 :—

		Jute manufactures.		Value in lakhs of Rs.
		Gunny bags in millions of number.	Gunny cloths in millions of yards.	
1879-80 to 1883-84	..	54.9 (100)	4.4 (100)	124.9 (100)

1932-33	..	415.0 (756)	1,011.7 (22,998)	2,130.7 (1,713)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the export showed an increase, as compared with the average of the war quinquennium (1914-15 to 18-19). In the following two years, the export recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons

fell back again to Rs. 50 at the end of November and recovered at Rs. 64 at the close of the year.

The total quantity of jute manufacture exported by sea from Calcutta during the year 1922-23 was 668,000 tons as against 639,000 tons in the preceding year and 603,500 tons in the pre-war year 1913-14. The values of these exports amounted to Rs. 40,28 lakhs, or an increase of Rs. 10,36 lakhs over the preceding year and Rs. 12,08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15,82 lakhs and of gunny cloth Rs. 24,24 lakhs as against Rs. 13,86 and Rs. 15,92 lakhs respectively in the preceding year and Rs. 12,48 and Rs. 15,58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale. In 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36-4 and Rs. 31, in 1917-18 it dropped to Rs. 38-8-0 but rose again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 55 but rose again to Rs. 66. It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but

Assam	156,700	145,300
Total ..	2,517,500	2,497,000

† Including Nepal.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances.—In 1886 the existing mills, finding that, in spite of the constant opening up of new marks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are:—
Chairman.—Mr. H. H. Burn,

Members of Committee.—

Mr B. M. Birla, Mr G. M. Garrie, Mr S. K. Scott, Mr C. G. Cooper, M.L.C., Mr A. Wilson, Mr. John Scott.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more so*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert Mr. J. H. Parks, to advise them on the point.

bility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. During the past 10 years a policy of curtailment of output has been continuously in force. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent of the trade, have worked 40 hours per week, with 15 per cent of the total complement of looms sealed, and the agreement incorporates a clause which provides that the mills will not instal any extra productive machinery or relative buildings during the currency of the agreement, which will remain in force until three months notice of intention to alter the present working arrangements, or to terminate the agreement, has expired. Since the 1st November 1934 this agreement has been modified to the extent that the mills have worked with only 12½ per cent of the total complement of their looms sealed, and as from 1st May 1935 only 10 per cent will remain sealed. Working hours, however, have continued to be restricted to 40 per week. In addition to this working arrangement, which as has been stated above applies only to the mills in the membership of the Association, there came into force with effect from 1st August 1932 an agreement with the five principal mills outside the Association, namely Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30th June 1933. With certain modifications this agreement has since been extended and is now a continuing agreement, subject to six months notice of termination being given by either party, but this notice could not be given before the 1st July 1934. Five of the Association mills—Premchand, Craig, Waverley, Megna and Nuddca—have also been granted the privilege of working 54 hours per week with a full complement of machinery.

An Association, styled the **Calcutta Jute Dealers Association**, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mills in and around Calcutta. The present Committee is—Mr. H. A. Luke, *Chairman*. *Members*—Mr. D. King, Mr. H. F. Mytton, Mr. I. D. C. Bulst, Mr. A. C. Robertson and Mr. Murray Fleming.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, viz., 1,490,000 tons or 3,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought

about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly via Dunkirk), Russia (via Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 24½ lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, sand bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,292 looms and 863,339 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 13.87 lakhs to Rs. 15.82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15.92 lakhs and Rs. 24.24 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp plant** (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength. It was valued at £18 per ton with Bimlipatam jute at £12 10s., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt

that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent. from 197,412 cwts. to 269,487 cwts. and the value from Rs. 26 93 lakhs to Rs. 36 68 lakhs.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan. Imports of raw wool in 1933-34 decreased from 7.2 million lbs. valued at Rs. 42 lakhs to 5.1 million lbs. valued at Rs. 34 lakhs. Australia with her contribution of 2.8 million lbs. valued at Rs. 18 lakhs still remained the largest supplier, although this quantity was less by 0.2 million lbs. as compared with imports from that country in 1932-33.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of mills in British India in 1930, the latest year for which

details are available, was 12 of which five were in the United Provinces. The paid up capital of these mills was Rs. 68,28,576 and the number of looms and spindles was 1,447 and 69,293 respectively. The average number of persons employed daily in these mills was 4,240. There are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,879 lbs. valued at Rs. 1,17,90,396. As regards Indian States there are four woollen mills in Mysore which produced woollen goods of 2,700,201 lbs. in weight in 1930, the value being Rs. 17,83,256. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself. Imports of woollen piecegoods in 1932-33 increased by over 8 million yards as compared with the preceding year, and even exceeded the imports of 1929-30 by about a million yards. Imports came chiefly from France, Italy, Japan and the United Kingdom. There was a considerable increase in the number of woollen shawls imported in 1932-33, Germany being the largest single source of supply. Imports of carpets and floor-rugs declined to 138,000 lbs. in 1932-33 from 267,000 lbs. in 1931-32. The share of Persia in this trade receded considerably, but imports from the United Kingdom rose.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, Govt. Press, Calcutta, (1910).

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *borah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, *viz.*, Bombycidae, the domesticated or mulberry-feeding silkworms; and Saturniidae, the wild or non-mulberry-feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms, the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially these of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The

eri Silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut.-Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry

Silk Industry.—In a short Prefatory note Mr. Bainbrigg Fletcher (Imperial Entomologist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa, in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends

largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M. N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54½ lakhs. In 1932-33 exports of raw silk and silk manufactures amounted to Rs. 318 lakhs in value, compared with Rs. 3·34 lakhs in the previous year.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 800 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had

been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *ai* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry

can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard of Pusa in Bulletins Nos 51 and 54 of the Agricultural Research Institute. Other aspects of the question have been fully examined in the *Agricultural Journal of India* by Mr. W. A. Davis, Indigo Research Chemist

to the Government of India. An Indigo Cess Bill was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government.

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

Exports of indigo made a slight recovery in 1933-34 and amounted to 500 cwts. as against 300 cwts. in 1932-1933.

OILS AND OIL CAKES.

Oilseeds—The total exports of Indian Oilseeds of all kinds improved in quantity from 7,33,000 tons in 1932-33 to 11,24,000 tons in 1933-34 and from Rs. 11,31 lakhs to Rs. 13,66 lakhs in value. The exports of oil cakes showed a very slight increase from 2,86,700 tons to 2,87,000 tons in 1933-34 but the value recorded fell away from 197 lakhs to 165 lakhs.

A pamphlet on the subject which was published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of coconut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an oil-milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than coconut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years it was handed over to the Assam Company. It may be

said, however, that the foundations of the present tea industry were laid between 1858 and 1859. Since the latter date the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1875 :—

Progress of the Industry.

Year.	Area under tea in 000 acres.	Production in 000,000 lbs.	Year.	Area under tea in 000 acres	Production in 000,000 lbs.
1875-79 (average).	173	34	1926 (average).	679	364
1880-84 " "	241	57	1927 " "	690	361
1885-89 " "	307	90	1928 " "	702	372
1900-1904 " "	500	195	1929 " "	712	401
1910 " "	533	249	1930 " "	802	391
1915 " "	594	352	1931 " "	807	394
1920 " "	654	322	1932 " "	809	433
1925 " "	672	335	1933 " "	816	383

It will be seen from the above table that during the last sixty years, while the area under tea has risen by over 400 per cent, the production has increased more than ten times

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

The following table shows the various centres of the industry in the country and their relative importance :—

Provinces.	Area under crop '000 acres.	Production '000 lbs.	Average daily working strength (permanent and temporary)
Assam. —			
Brahmaputra Valley .. .	289	155,032	388,655
Cachar and Sylhet	141	64,309	128,553
Total	430	219,341	517,208
Bengal. —			
Darjeeling .. .	61	20,311	63,821
Jalpaiguri	132	74,825	117,341
Chittagong	5	1,523	5,227
Total	198	96,658	186,389
Madras. —			
Nilgiris	36	12,939	30,122
Malabar	12	5,318	10,211
Coimbatore	25	11,004	26,564
Others	1	34	474
Total	74	29,295	66,371
Coorg	•	209	401
Punjab	10	2,111	10,697
United Provinces	6	1,733	3,312
Bihar and Orissa	3	1,094	3,177
Total British India	721	350,442	788,760
Indian States	88	32,822	77,743
Total India	809	383,264	866,503

* Less than 500 acres.

Although India produces such large quantities of tea its consumption of tea is comparatively very little, about 57 million lbs. as compared with 421 million lbs. in the United Kingdom and the consumption per head is only .18 lb. as compared with 9.20 lbs. in the United Kingdom. The low domestic consumption, however, enables India to export large quantities to other countries the principal among which is the United Kingdom. It is estimated that India supplies about 40 per cent. of the world demand of this commodity. In 1933-34, 87 per cent of the total quantity of tea produced in India was exported abroad.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over

the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The beneficial effects of this measure are already being seen. During the first year of its operation the hopes engendered by the regulation scheme have, to a considerable extent, been justified, and the industry has been enabled to meet, what have undoubtedly been, very disturbing conditions.

The following table explains briefly the position as regards the *export of tea from India* —

Year.	Amount exported (million of lbs.)	Value in lakhs of rupees.	Col. 3 as percentage of value of total exports.
1	2	3	4
1926-27	349	29.04	9
1927-28	362	32.48	10
1928-29	360	26.60	8
1929-30	377	26.01	8
1930-31	356	23.56	..
1931-32	341	19.44	..
1932-33	379	17.15	..
1933-34	318	19.85	..

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports:—

	1928-29 per cent	1933-34 per cent
To United Kingdom ..	83.0	86.9
To Rest of Europe ..	2.0	1.3
To Asia	5.8	2.0
To America	5.7	7.5
To Australia	1.6	1.4
To Africa	1.9	0.9
	100	100

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1925, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb realised at the Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. The position, however, improved considerably during 1933-34, when the prices realised averaged 8 as. 1 p.

The following table gives the average wholesale prices of tea in Mincing Lane from 1922-30, in pence per lb. —

Year.	North India.	South India.
1922	15.46	14.00
1923	18.76	18.14
1924	19.92	19.02
1925	17.68	17.62
1926	19.36	19.00
1927	19.01	18.88
1928	16.49	15.40
1929	15.72	15.35
1930	14.69	14.52

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11=100:—

	Average price at auction sales.	
	Price per lb. As. p.	Index Number.
1901-02 to 1910-11 ..	6 0	100
1927-28	14 10	247
1928-29	11 4	189
1929-30	9 11	165
1932-33	5 2	86
1933-34	9 7(a)	160(a)
	4 10(b)	81(b)

(a) For teas sold with export rights.
(b) " " for internal consumption;

The fall in tea prices greatly affected the profits of tea companies. The following table which shows the profit per acre of 65 tea companies gives an idea of the effect on profits of the fall, in prices —

Profit per Acre of 65 Indian Tea Companies.

	1913.	1924.	1928	1929.
Average profit per mature acre	£ 6-10-7	£ 15-2-0	£ 10-0-0	£ 6-9-0
Average profit in pence per lb	2.6	6.4	3.84	2.26
Average crop per mature acre	599 lbs.	560 lbs.	625 lbs.	684 lbs.

It is quite clear from the above table that, although the yield per acre has considerably increased, the profits per acre are actually lower than in 1913.

The main reasons of the slump in the tea industry are over-production and intense competition, particularly from Java and Sumatra. In order to counteract the adverse influence of the former, an agreement to restrict output, was reached early in 1930 by associations of tea-growers. For India and Ceylon the degree of restriction to be undertaken varied according to the quality of the tea produced, being greater for the lower qualities than for the finer.

According to the latest agreement between the Indian, Ceylon and Netherlands East Indies producers, for five years from 1933 onwards exports are to be restricted and extension of cultivation not to be permitted beyond $\frac{1}{2}$ per cent of the present planted area.

During the year 1932-33 there was a considerable fall in the wages of workers on tea plantations. The average wages of men, women and children in the Assam Valley were Rs 10-10-4, 7-14-6 and 5-11-6, respectively, as compared with Rs 12-8-5, 9-8-7 and 6-15-8, respectively, in 1931-32.

Under the Ottawa agreement Indian Tea has been granted preference by Great Britain.

The following are the important recommendations made by the Royal Commission on Indian Labour in regard to the Tea Industry. The recommendations contained therein are very vital to the future welfare of the industry and the principal amongst them have therefore been reproduced below. —

(1) No further legislation making a breach of contract of service a criminal offence should be countenanced.

(2) The power conferred by section 3 of the Assam Labour and Emigration Act to prohibit recruitment in Assam in particular localities should be withdrawn immediately and no barrier

should be set up to prevent free movement of labour from one part of India to another.

(3) The Assam Labour and Emigration Act should be repealed and a new measure set up in its place.

(4) The Assam Labour Board should be abolished.

(5) The Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces who have not yet settled in Assam.

(6) Every future assisted emigrant to an Assam tea garden should have right after the first three years to be repatriated at the employers' expense.

(7) A worker dismissed before the expiry of the three years should be entitled to repatriation at the expense of the employer dismissing him, unless it is established that the dismissal was due to wilful misconduct.

(8) The establishment of statutory wage-fixing machinery, if practicable, is desirable, and there are reasons for believing that, if proper methods are adopted, a practicable scheme can be devised.

(9) Before legislation is undertaken, one enquiry should be undertaken as to the most suitable form of machinery, the actual rates paid and the variation in these rates between district and district and garden and garden.

(10) Maternity benefits should be provided for by legislation.

(11) The employment, either directly or with their parents, of children before the age of 10 years should be prohibited by law.

(12) Boards of Health and Welfare should be established under statute for convenient planting areas.

These recommendations have generally been implemented by the Tea Districts Emigration Labour Act (XXII of 1932) which came into force on 1st October 1933.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1932-33 (including plantations of less than 10 acres) was 1,77,000 acres, an increase of 19 per cent over the figures for 1925-26.

The total exports of coffee increased from 1,00,000 cwts. in 1926-27 to 2,77,000 cwts. in 1927-28. In 1928-29 and 1929-30 the shipments declined and amounted to 1,98,000 cwts. and 1,84,000 cwts. respectively, but exports again rose in 1930-31 and amounted to 2,93,000 cwts. In 1931-32 the shipments declined to 1,56,000 cwts. but in 1932-33 exports again

rose and amounted to 1,73,000 cwts. The principal destinations of Indian coffee are the United Kingdom and France. Shipments to the United Kingdom rose from 44,000 cwts. in 1931-32 to 52,000 cwts. in 1932-33 and those to France from 43,000 cwts. to 54,000 cwts. while there was a slight increase of 900 cwts. in the exports to Norway. Other European countries, namely, Germany and Italy reduced their demands from 16,000 and 6,000 cwts. to 13,000 and 5,000 cwts. respectively. Shipments to Iraq and Australia (including New Zealand), showed an increase, while there was a decrease in the shipments to Bahrain Islands.

Not only does India export coffee in large quantities but it also imports it chiefly from Java, Ceylon and the Straits Settlements which it re-exports to Mascat Territory, Iraq and the Bahrain Islands.

The following table gives the figures of the production and exports of Indian coffee —

Production and Export of Indian Coffee in thousands cwts.

12 Months ending June 30th.	Production	Export.	Surplus available for Home consumption.
1925	272.1	251.9	20.2
1928	317.5	260.9	56.5
1929	247.8	142.6	105.2
1930	352.0	243.0	109.0
1931	294.4	208.4	86.0
1932	300.1	162.0	138.1
1933	289.4	168.7	120.7

Making allowance for the re-exports from India of imported coffee, the consumption of coffee in India in 1933 was approaching six times the amount consumed in 1925.

The total production of cured coffee in India during the season 1932-33 was nearly 32½ million lbs. as compared with 34 million lbs. during the previous season. Exports declined from 293,000 cwts. in 1930-31 to 156,000 cwts. in 1931-32. The pre-war and post-war averages were 255,000 cwts. and 216,000 cwts. respectively. Local consumption of Indian coffee which has been expanding expanded still further owing to the restrictions on imported coffee. As regards exports, the United Kingdom and France which constitute the principal markets, both increased their respective off-takes very considerably and required 52,000 cwts. and 74,000 cwts. as against 44,000 cwts. and 43,000 cwts. respectively in 1931-32. The total value of the exports of coffee was 1.10 lakhs in 1932-33 as against Rs. 94 lakhs in 1931-32.

The daily average number of persons employed on the plantations during 1932-33 was returned

at 1,01,174 of whom 64,336 were permanently employed (namely, garden labour 43,126 and outside labour 21,210) and 36,838 temporarily employed (outside labour), as compared with 96,706 persons (39,157 garden and 17,153 outside labour permanently employed and 40,396 temporary outside labour) in 1931-32.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s. in 1923 and 127s. in 1929 it fell to 86s. in 1930.

The declared value per cwt. of coffee was Rs. 60-11-9 in 1931-32 as against Rs. 65-8-1 in 1930-31. It rose to Rs. 63-6-7 in 1932-33. The wholesale price in India per cwt. in April 1933 was Rs. 72-0-0.

Sugar.

Sheltered behind an adequate tariff wall, the Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages, consequences of the depression—have helped the rapid growth of the industry. Low prices of land and material, low price of machinery, low price of cane—all these factors have contributed to the remarkable development of the industry. As a result, India is now the largest sugar producing country in the world. And, the capital invested in the industry is variously estimated at between Rs. 15 and Rs. 20 crores.

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931. In addition, a revenue surcharge of 25 per cent (amounting to Re. 7-13 per cwt.) was imposed in September, 1931. In accordance with the Tariff Board's recommendations,

Government issued a *communiqué* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. on all classes of sugar until March 31, 1938. A further enquiry before the end of that period into the question of continuing protection to the industry was also provided for. At present, therefore, the total import duty on foreign sugar amounts to Rs. 9-1 per cwt.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt. to be distributed among the provinces "for the purpose of assisting the organisation and operation of co-operative societies among the sugarcroppers so as to help them in securing 'fair' prices." Allowing for the excise duty, the industry now enjoys a protection of Rs. 7-12 per cwt.

Statistics given below, show the progress of the industry in recent years :—

Year.	No of Factories	Quantity of sugar manufactured from cane Tons	Quantity Refind from gur. Tons	Khandsari sugar (Est.) Tons	Total Tons
1929-30	27	89,768	21,150	200,000	310,918
1930-31	29	119,859	31,791	200,000	351,650
1931-32	31	158,581	69,539	250,000	478,120
1932-33	58	290,177	80,000	275,000	645,177
1933-34	123	459,600	95,000	225,000	779,600

The area under cultivation of sugar-cane has kept pace with increased production, from 2,677,000 acres in 1929-30, it has increased to 3,349,000 acres in 1933-34. Prior to 1932-33, there were only 31 cane factories, 27 new factories were added in 1932-33 alone while another 65 new factories were started in the following year—an increase of 400 per cent in two years. Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (*gur*) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931-32, the volume of factory produced sugar has increased by approximately 300 per cent.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance from an average of approximately one million tons in the years up till 1930-31, imports fell by about 45 per cent in the following year and dropped to about 250,000 tons in 1933-34. As a result of dwindling imports, Government are losing revenue from this source. Despite, or may be because of, the heavy duty, the yield from this source diminished from over Rs. 10 crores in 1930-31, to about Rs. 3.81 crores for the financial year ended March 31, 1935.

In view of the astounding growth of the industry within such a short time, the following table of forecast of annual consumption and imports of sugar into India up to 1936-37, is of interest :—

	1932-33 (Actual) Tons	1933-34 (Est.) Tons	1934-35 (Est.) Tons.	1935-36 (Est.) Tons	1936-37 (Est.) Tons
Indian sugar production of the preceding cane-crushing season	478,120	645,000	779,000	887,000	1,007,000
Consumption of sugar in India during the official year	895,280	880,000	900,000	900,000	900,000
Difference between production and consumption, representing margin for imported sugar entering into consumption during the official year.	417,160	235,000	121,000	13,000	—107,000

from the forecast above, prepared by Mr. R. C. N. Sastava, Sugar Technologist, Imperial Council of Agricultural Research, India, it appears that home production in 1936-37 should outstrip consumption unless internal demand materially expands. During the three years ended 1933-34, sugar consumption in India has appreciably gone down by about 19 per cent. per year. Stimulating consumption is, therefore, one of the pressing problems facing the industry at present. Another problem before the industry is the need for a thorough overhauling of the existing machinery of distribution. Some believe that the problem is not so much of over-production as of an equitable distribution between the various parts of the country. Excess production in

areas like the U P and Bihar, the sugar belt of India, has yet to be tackled by the industry.

During the latter part of 1934, a conference of Indian sugar-mill-owners was held at Calcutta to discuss the question of a marketing organisation. In order to eliminate as far as possible imports of foreign sugar, the problem of disposing of the surplus production of the sugar belt at various port towns at competitive prices was discussed. The proposal to form a central marketing board was mooted in the conference and though tentative agreements were arrived at regarding certain problems immediately facing the industry, the proposed board was not set up by the end of the year 1934.

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calcutt in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier

crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are—(i) the Coimbatore and Dindigul tract of Madras, where the *Usi-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (ii) the Godavari Delta of Madras; (iii) the Rangpur tract of Bengal; (iv) the Districts of Bihar and Orissa; (v) Guzerat in Bombay and (vi) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Exports.—The shipments of un-manufactured tobacco rose from 21,000,000 lbs to 29,000,000 lbs. in quantity and from Rs. 73 lakhs to Rs. 90 lakhs in value. The most important outlet for Indian tobacco was, as usual, the United Kingdom which took 13,000,000 lbs. as compared with 9,000,000 lbs. in 1932-33. Among the other important markets Aden and Dependencies took 5.4 million lbs as against 4.4 million lbs., Japan 3.3 million lbs. as against 3.1 million lbs. and the Netherlands 3.5 million lbs. as against 1.7 million lbs. in 1932-33. Shipments to the Straits Settlements amounting to 1.2 million lbs. showed an increase of 0.4 million lbs. or of 50 per cent. There were also concurrent increases in the shipments to the Federated Malay States and Hongkong. Except for Hongkong, China practically withdrew from the market, her offtake amounting to only 2,000 lbs. as against 72,000 lbs. in 1932-33 and 2,16,000 lbs. in 1931-32.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of

newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

The Review of the Customs Administration in India for 1930-31 states that during the year a total of 17,345 grains of cocaine were seized by the Customs authorities, of which 1,792 ounces were valued at approximately Rs. 1,80,000.

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Rector to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries. So much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted, (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export

to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. She never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

International Aspect of the Problem.—It was only during the processes and negotiations by which the Indian opium export trade to China was being suppressed that the Opium question began to assume a widely international aspect. This happened on the initiative of the U.S.A., at whose instance an International Opium Commission met at Shanghai in 1909 and formulated a series of recommendations for the suppression of opium smoking and the regulation of the use of opium and morphia. The United States thereafter advanced a further proposal for an International Conference at the Hague. This met on 1st December 1911, and finally drew up a convention on the subject, the terms of this document presented no new

ideas to the Government of India. Their provisions India had long observed. As regards morphia and cocaine, with which the Hague Conference concerned itself, the uses of these drugs in India had long been subject to exceedingly strict regulations. But these two drugs, the use of which for other than medical purposes invariably takes the form of dangerous vice, were becoming a menace to the world. They were not included within the scope of the proposals submitted by the U.S.A. for the consideration of the Conference. It was mainly owing to pressure by the Government of India that they were included within the terms finally signed and the rigid and universal application of the articles of the Convention which apply to them would rid the world of the drug evil.

As regards prepared opium, that is to say smoking opium, India does not and never has exported it and the sale of it in India is prohibited. No opium is exported from India to the United States of America. None has been exported to Great Britain by private merchants since 1916. Exports to Great Britain are strictly limited to medicinal requirements and go officially from the Government of India to the British Government. Nor is Indian opium exported to any other country in Europe.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

The Commission of 1893.—Despite all this, the principles of Indian internal opium policy essentially remain, subject to certain changes of scientific opinion in regard to medicinal uses, those laid down by a Royal Commission which was appointed by His Majesty's Government, mainly as a result of the activities of the Society for the Suppression of the Opium Trade, in 1893, to inquire into all the circumstances connected with the production and sale of Indian opium. The Society which was largely instrumental in bringing about the institution of the inquiry, recorded its opinion that the appointment of the Commission constituted "the greatest and most solid forward step that the movement for the suppression of the opium trade has yet made" and considered that the Royal Commission was "as fair-minded and impartial a tribunal as the Society could have desired to hear its case." The results of the enquiry were published in 1895 in seven volumes.

The Royal Commissioners examined with the greatest care the problem of opium consumption in India and in brief they found that it was not only subject to careful regulation but was governed by longstanding and admirable disciplinary habits among the people. Excessive use, they found, was exceptional, and condemned by public opinion. As regards the legal restriction of its use to medical needs, they advised that Government could do no more than limit the extent of cultivation and hold a monopoly of manufacture and wholesale supply and that to draw a line in popular opinion between medical uses and those not strictly so describable would be impracticable. They agreed that the mass of Indian opinion was opposed to prohibition as an unnecessary restriction on individual liberty and interference with established customs and habits. Apart from the religious question they found Indians generally to consider the use of alcohol to be more objectionable, more injurious and more disgraceful.

The Government of Lord Hardinge, in a Despatch to His Majesty's Government in 1911, and that of Lord Reading, in a despatch dated 24th March, 1921, both in the same words took their stand on the conclusion of the Royal Commission "that the opium habit as a vice scarcely exists in India, that opium is extensively used for non-medical and quasi-medical purposes, in some cases with benefit and for the most part without injurious consequences, that the non-medical uses are so interwoven with the medical uses that it would not be practicable to draw a distinction between them in the distribution and sale of the drug and that it is not necessary that the growth of the poppy and the manufacture and sale of opium in British India should be prohibited except for medical purposes." The despatch of Lord Hardinge's Government was approvingly quoted by Lord Reading's Government a few years ago. It has long been recognised that any attempt to eradicate by law the use of opium would be open to all the objections involved in bureaucratic interference with popular custom. Eating it is largely quasi-medical; it is used for the prevention, cure and alleviation of disease, as a prophylactic as an anodyne and as the commonest and most treasured household medicine of the people, to whom qualified medical assistance is inaccessible. It is also taken as a solace, as a tonic and as a

restorative to lessen or avert fatigue and in other ways in which, when moderately used, it is relatively innocuous.

Present Policy.—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to suppress.

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

While speaking at the Second Geneva Opium Conference on 18th January 1925, Lord Cecil stated that he had seen figures, apparently taken from a report made by the United States Treasury, to the effect that consumption was greater in America than in India. The estimate framed by the Advisory Committee of the League of the annual requirements of opium for strictly medicinal and scientific purposes is 800 milligrammes or 9.25 grains per capital which is roughly equivalent to 6 Indian seers per 10,000. The Health Committee of the League opined that this could be reduced to 450 milligrammes, or 6.94 grains in countries possessing a well developed medical service. The consumption per capita in British India during 1924-25 worked out at 17.2 grains per head. The rate of consumption has certainly fallen since the compilation of this published figure. The amount includes veterinary uses and these are extensive, though to secure statistics of the quantity of opium given to animals is impossible. Allowance also has to be made for the poor morphine con-

tent of Indian opium, which is about 9 per cent. at 90 deg. consistence, and the limited number of medical practitioners trained on Western lines to administer strictly measured doses. Lord Cecil's statement at the League of Nations was received with extreme criticism by Mr. Porter of the American delegation. Mr. Porter said the American statistics cited had been disavowed and that Lord Cecil's observations were a "vile slander upon the people of the United States." Lord Cecil apologized and withdrew his statement. But Mr. Frederick Wallis, Commissioner of Correction, New York, writing in the Current History Magazine for February, 1925, showed the annual per capita consumption in Italy to be one grain, in Germany 2 grains, in England 3 grains, in France 4 grains and in the United States 36 grains. In "Current History" for March, 1925, Mr. Wallis defended this last figure and said that in view of the smuggling into the United States "it would appear to me that the consumption would be much larger than the Government officially gave as 36 grains." It appears now to be recognised by all sane opinion throughout the world that India has the cleanest sheet if any in regard to opium control and export. Even the former ill informed sentimental attacks upon the Government in these respects have almost stopped.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under license. Importation into British from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The sown area in British India which produced the crop of 1931-32 was 37,012 acres, i.e., 28.3 per cent of the area in 1922-23, and 20 per cent of that in 1912-13. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1933. The consumption of opium in the different provinces in India in 1932 is approximately as follows:—

	lbs.
Madras	62,568
Bombay (including Sind) .. .	51,090
Bengal	64,185
United Provinces	39,890
Punjab	62,210
Burma	41,380
Bihar & Orissa	37,724
Central Provinces and Berar ..	26,446
Assam	30,512
Administered Areas (a) .. .	14,445
Total for British India .. .	4,28,840
Aden	90
(a) North-West Frontier Province, Baluchistan, Ajmer-Merwara and Delhi.	

The population of British India according to the 1931 Census is 271,526,992, and the consumption per head in British India, excluding Aden, inclusive of the opium used for veterinary purposes but excluding that consumed for medicinal purposes was 11.04 grs. per head of the population. The population of Aden in 1931 was 50,809 and the opium consumption per head was 12.3 grs.

Close supervision is maintained over the licensed vendors in all parts of British India, the conditions of their licences require that the

shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE.

The total value of the imports of glass and glassware amounted to Rs. 122 lakhs in 1933-34 as compared with Rs. 142 lakhs in 1932-33. Almost all the important descriptions under this head recorded decreases. Japan still retained the foremost position although the value of her exports shrank to Rs. 57 lakhs from Rs. 65 lakhs in 1932-33.

Manufacture of Glass in India—Glass was manufactured in India centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the industry. But no further traces of ancient Indian Glass Industry as such survive, yet, it is certain that by the sixteenth century it was an established industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the industry in its present stage, (1) Indigenous Cottage Industry and (2) the modern Factory Industry.

(1) The Indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks", made in larger factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old type Indian ones.

(2) The modern Factory type of organization of this industry is just in its infancy at

present. The existing factories mostly stop at producing glass cakes for bangles as in Firozabad or simple kind of lampwares and bottles. There is one factory in the United Provinces which since 1929 has been manufacturing sheet glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are a number of factories engaged in the production of lampware, of which two or three only produce bottle and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijnor and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the later years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventable causes, prominent among which were (1) Lack of enlightened management. (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (a) nearness of quartz and fire-clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles, etc. (5) Lack of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type.

(4) The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamenable to management. (5) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (6) To a certain extent, competition from Japan and European countries.

The Indian Industrial Commission say in their Report (Appendix B), *viz.*: "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India had up to that time been largely, if not quite entirely, in the hands of German firms or firms of German origin and Germany had the largest share of India's raw hides. In the four months before the outbreak of war she took 30 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Germany still takes the major share of India's raw hides while America takes the bulk of goat skin exports. Shipments of tanned hides go mostly to Great Britain.

The exports of hides and skins, tanned or dressed, amounted to 10,700 tons valued at Rs. 565 lakhs as compared with 14,500 tons valued at Rs. 466 lakhs in 1932-33.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons, in famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides.—The fifteenth report of the Imperial Economic Committee states that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots, partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing the thread. Raw sheepskins are used for similar

articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glaze kid, of which commodity the United States is the chief producer.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom, but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes, the entry into the trade of new and at first inexperienced firms, the increased cost of arranging for supervision at up-country points. It has, however, been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent. on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and falling this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear

with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill

proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire, and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolams. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INDIAN INVENTIONS AND DESIGNS.

While India will have to depend for some time to come on foreign manufacturers for her supply of textile machinery, power plants and other industrial requirements, Indian engineers and chemical experts will have ample opportunity to exercise their inventive skill in various other directions. These may include agricultural implements, domestic appliances, drying and moistening apparatus, labour-saving devices, small manufactures in hardware, pumps, water lifts, furniture and metal wares, construction of roads and permanent ways, railway signalling and controlling, railway vehicles, buildings and structures, valves and cocks, latrines, closets and sanitary appliances. There will also be new chemical processes an apparatus including the manufacture of vegetable products, foodstuffs, treatment of oil seeds, the use of by-products and waste materials, use of starchy raw materials for the sizing of yarn and cloth, tallow substitutes, manufacture of caustic soda, soda ash, bleaching powder and chlorine and other chemical products for use in the various industries which the country will be engaged in developing in the near future.

A handbook to the **Patent Office in India** which is published by the Government Press, Delhi, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The existing Indian Patent Law is contained in the Indian Patents and Designs Act, 1911 as amended in 1930 and the Rules of 1933. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act, (IV of 1889) which forms Chapter XVIII of the Indian Penal Code,

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the registration of Trade Marks, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities, the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patents and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter Hyderabad (Deccan), Mysore, Gwalior, Baroda, Travancore, Marwar, Cochin, Kashmir and Jamu have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession, but under the reciprocal arrangement an applicant for an Indian patent has 12 months' priority in the United Kingdom, Australia, Canada, New Zealand, the Irish Free State, the Union of South Africa and Ceylon and *vice versa*. The object of the Act of 1911 was to provide a simpler more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They

gave further protection both to the inventor by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

New Legislation.—Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following:—

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years, instead of 14 years.

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government.

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms.

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

The period of opposition to the grant of a patent has been extended to 4 months from the date of the notification of the "Acceptance" of the application, instead of 3 months. The provisions contained in the Indian Patents and Designs Rules, as regarded divisional applications in respect of inventions covered by the original application and divided therefrom, have been amplified and embodied in the Act itself. Section 10 has been amended to empower the Controller to decide disputes about proceeding with the applications for patents, that may occur between the applicants and third parties, or between joint applicants among themselves.

The time for appeal to the Governor-General in Council has been extended to 3 months, instead of 2 months from the date of the decision appealed against. A new Section 21A has been provided relating to secret patents. A new Section 25A has been provided for giving relief in suits for infringement of patents in respect of valid claim, despite the existence of invalid claims in the specification.

The definition has been altered as to the person entered on the Register as the grantee or proprietor of the patent. Section 78A (4) has been amended to enable British India to enter into reciprocal arrangement with the Indian States.

The definition of the term "Design" has been altered, and the time for applying to secure for the registration in India, the priority date of the application in the United Kingdom or other parts of the British Empire, has been extended to 6 months.

Printed Specification of applications for patents, which have been accepted (One Rupee per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

Note.—The quinquennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 6 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(a) Excludes gold imported and exported on behalf of the Bank of England.

(b) Figures are for calendar year ending 31st December.

* Net exports.

According to the report by Mr. N. Mukarji, Actuary to the Government of India, contained in the Indian Insurance Year Book, 1932, the number of companies subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 282 of which 136 companies are constituted in India and 146 companies are constituted outside India. Of the 136 Indian companies, 80 are established in the Bombay Presidency, 25 in Bengal, 21 in the Madras Presidency, 14 in the Punjab, 8 in Delhi, 2 each in the Central Provinces, Ajmer and Burma and 1 each in Burma and the U P. Of the 146 non-Indian companies 71 are constituted in the United Kingdom, 31 in the British Dominions and Colonies, 18 in the Continent of Europe, 12 in the United States of America, 9 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 103 in number and of the remaining 33 Indian companies, 20 carry on life business along with other insurance business and 13 carry on insurance business other than life.

Besides the Indian life offices, there are some pension funds, mostly connected with Government offices, which are exempt from the operation of the Act and the Indian Post Office Insurance Fund is also exempt. As regards non-Indian companies, most of them carry on insurance business other than life. Out of the total number of 146 non-Indian companies, 122 carry on insurance business other than life, 10 carry on life business only and 14 carry on life business along with other insurance business. Of the latter 24 companies, 16 are constituted in the United Kingdom, 6 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

The total new life assurance business effected in India during 1931 amounted to 125,000 policies assuring a sum of nearly 26½ crores and yielding a premium income of 1½ crore, of which the new business done by Indian companies amounted to 97,000 policies assuring a sum of 17 crores and having a premium income of ½ crore. The share of the British companies in respect of new sums assured is 3½ crores, of the Dominion and Colonial companies about 6 crores and of the single German company ¼ crore.

The average sum assured under the new policies issued by Indian companies is Rs. 1,761 and under those issued by non-Indian companies Rs. 3,400.

The total life assurance business effected in India and remaining in force at the end of 1931 amounted to 714,000 policies assuring a total

sum of 168 crores including reversionary bonus additions and having a premium income of very nearly 8½ crores. Of this the share of Indian companies is represented by 502,000 policies assuring a sum of 94 crores and having a premium income of 4½ crores.

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the **dividing plan** under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy-holders in each class are charged the same rate of premium of subscription irrespective of their age on admission ranging even in some cases from 18 to 60 years. "Business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policy-holders and agents and later on by the company. It has been declared to be the curse of insurance enterprise in India." Before the Act of 1912 was passed there were numerous companies which transacted life assurance business on the dividing plan and most of them came to grief. Of such companies which were in existence at the time of the passing of the Act the majority have disappeared and some have stopped issuing policies on the dividing plan. A few new companies have taken up this dividing insurance business and it will not be long before they realise their mistake.

Some Indian life offices have extended their operations outside India, mostly in British East Africa and in the Near East. The total new sums assured by these offices outside India in 1931 amounted to 66 lakhs yielding a premium income of 4 lakhs and the total sum assured including reversionary bonus additions in force at the end of 1931 amounted to 4 crores, having a premium income of 2½ lakhs.

The total new annuity business effected during 1931 was for the amount of about 1 lakh per annum, which was equally shared by Indian and non-Indian companies. The total annuity business remaining in force at the end of the year was for the amount of 34 lakhs per annum, of which the amount payable by Indian companies was a little over 1½ lakhs per annum.

The life assurance business of Indian companies which steadily increased during 11 years up to 1929 received a setback in 1930 owing to the general financial depression. The following table shows the **new business effected** since 1921 in each year and the total business remaining in force at the end of the year.

Year.	New business written during the year.	Total business remaining in force at the end of the year
1921	5,47 lakhs.	34 crores.
1922	5,61 "	37 "
1923	5,85 "	39 "
1924	6,89 "	42 "
1925	8,15 "	47 "
1926	10,35 "	53 "
1927	12,77 "	60 "
1928	15,41 "	71 "
1929	17,29 "	82 "
1930	16,50 "	89 "
1931	17,76 "	98 "

A large portion of the new business transacted by the younger and less firmly established companies lapsed within a short time and the growth of total business in their case is not commensurate with the volume of new business transacted in each year. The total business which lapsed during 1931 was 7½ crores and was over 40 per cent. of the total new business.

The **net income** of the Indian companies under their life assurance business from premiums and interest amounted to 5½ crores in 1931 and was in excess of ½ crore over the corresponding income of the previous year. Claims amounted to 1½ crore and exceeded the previous year's figure by 12 lakhs. Claims by death showed an increase 5 lakhs and

claims by survivorship an increase of 7 lakhs, respectively.

The life assurance funds increased by nearly 2 crores during 1931 and amounted to 22½ crores at the end of that year. The average rate of interest earned on the life funds during the year was a little less than 5½ per cent.

The **Post Office Insurance Fund** was instituted by the Government of India in 1883 for the benefit of the postal employees but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund during the four years 1929 to 1932 —

Year ending 31st March.	New business effected during the year.		Total business remaining in force at the end of the year.		Total income.	Life Assurance fund at the end of the year.
	Number of policies.	Total sums assured	Number of policies.	Total sums assured and bonuses.		
1929 .	7,582	1,43,41,000	64,474	13,02,47,000	63,17,000	3,64,44,000
1930 ..	8,894	1,49,56,000	71,479	14,17,81,000	69,36,000	4,02,80,000
1931 .	9,710	1,50,38,000	79,053	15,32,85,000	76,05,000	4,46,46,000
1932 ..	6,484	98,15,000	83,165	15,88,89,000	81,39,000	4,91,47,000

Fire, Marine and Miscellaneous Insurance Business.—The net Indian premium income of all companies under insurance business other than life assurance during 1931 was 2½ crores of which the Indian companies' share was ½ crore and that of the non-Indian companies 1½ crore. The total amount is composed of—

1,28 lakhs from fire.

43 lakhs from marine, and

77 lakhs from miscellaneous insurance business.

The Indian companies received—

28 lakhs from fire,

7 lakhs from marine, and

24 lakhs from miscellaneous insurance business

The **total assets of Indian companies** amount to 29 crores of which stock exchange securities form the bulk. These securities are shown in the account at a net value of 20½ crores. Mortgage loans on policies and on stocks and shares are shown at 4 crores; land and house property are valued at 1½ crore; deposits, cash and stamps, are shown at ¾ crore, accrued interest at ¼ crore; agents' balances and other outstanding items at 1½ crore; and loans on personal security and other miscellaneous assets at ¾ crore. Investments of Indian companies outside India consist mainly of stock exchange securities and amount to ½ crore.

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. Any duties imposed for protective purposes are on the recommendations of the Tariff Board, as accepted or amended by Government. Under the terms of the Ottawa Agreement a large range of British and Colonial goods received a preferential rate of duty from January 1, 1933. But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc., are assessed at 10 per cent. and iron and steel railway material and ships at 15 per cent.

Re-Imports.—Articles of foreign production on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions:—

The Collector of Customs must be satisfied—

- (1) of the identity of the articles;
- (2) that no drawback of duty was paid on their export;
- (3) that the ownership has not changed between the time of re-export and subsequent re-import;
- (4) that they are private personal property re-imported for personal use, not merchandise for sale;
- (5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of alterations, additions, renovations and repairs, involving the substitution of new parts, done to the articles while abroad, which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification on re-importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback:

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such extended

term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown in any case determines, provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port:

Provided that, in every such case, the goods be identified to the satisfaction of the Officer-in-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for shipment.

Every person, or his duly authorised agent, claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported, and have not been re-landed and are not intended to be re-landed at any Customs port; and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued thereunder. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offenses may be classified conveniently under four heads:—

1. Counterfeit trade marks;
2. Trade descriptions that are false in respect of the country of origin;
3. Trade descriptions that are false in other respects; and
4. Lengths not properly stamped on pieces of goods,

NOTE 1 —In the expression ' *ad valorem* ' used in these Schedules the reference is to "real value" as defined in Section 30 of the Sea Customs Act, 1878 (VIII of 1878) unless an article has a tariff value assigned to it.

NOTE 2 —Tariff-valued heads are based on the ordinary trade description of each article and cover all reduced grades and mixtures unless they are separately provided for.

NOTE 3 —In this publication the expression "standard rate of duty" means in the case of articles liable to preferential rates of duty the standard rate of duty as opposed to the preferential rate and in the case of other articles the ordinary rate of duty.

(The following details of the Indian Customs Tariff are published by courtesy of the Government of India.)

THE FIRST SCHEDULE.—Import Tariff.

Item No.	Name of article	Nature of duty	Standard rate of duty	Preferential rate of duty if the article is the produce or manufacture of	Duration of protective rates of duty.
				The United Kingdom	A British Colony.
SECTION I					
Live Animals and Products of the Animal Kingdom					
1	ANIMALS, LIVING all sorts.	Revenue	Five 25 per cent <i>ad valorem</i>

Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States—and by whatever name it may be called India must in its political structure be a Federal State—nothing is more impressive than the ebb and flow in what may be called the adjustment of Federal and State rights. There is a constant mutation in the powers of the central government and the federal components, though in India we use the terms "Government of India" and "Provincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation which bulk largest in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high; wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement, it is felt that this does not go far enough, and there is still this pressure for some share in the revenues from the taxes on income which, it is believed, alone can put the industrial Provinces on a satisfactory basis.

A Review.

The financial organisation was, of course reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer of the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentage. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income tax than they were entitled to.

Regarding possible new sources of revenue the Federal or Provincial Finance Committee reported as follows —

Federal

Excise on Tobacco—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Units and their imposition by the Provincial Governments is now being encouraged by the Government of India. The difficulties in the way of a federal excise may be overcome in course of time but it would be unsafe for us to rely on this in the near future.

Excise on Matches—The imposition of an excise duty on matches is already under active consideration and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable yield of the tax for all India at a reasonable rate with due allowance for reduced consumption would be about 3 crores of which at least 50 crores would be raised in British India.

Other Excises—It is possible that other excise duties may occupy an important place in the fiscal Policy of India in the future but we do not feel warranted in relying upon the introduction of such measures in the early years of federation.

Monopolies—We have examined the suggestion made at the Round Table Conference that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly whether of production, manufacture or sale is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives which has been suggested as a possible monopoly is already subject to laws. Public utility monopolies stand on rather a different footing but the only new federal monopoly of this kind that has been suggested to us is broad-casting the revenue from which must be entirely problematical.

Commercial Stamps—In the Peel Report it is observed that "There is much to be said for federalising Commercial Stamps on the basis of various proposals made in the past, but no definite recommendation was made." We have examined this suggestion but on the whole we cannot recommend it, at least as an immediate measure.

The yield of certain stamp duties which have been placed in this category was in 1930-31, slightly more than one crore. This was a

sub normal year and the normal yield should be somewhat higher. In 1930-31 about 40 per cent of the yield was received by Bombay (one eighth of this being attributable to Sind), 27 per cent by Bengal and 12 per cent by Madras. The loss of revenue resulting from the federalisation of these duties would therefore be unevenly distributed and their federalisation would not ease the problem of distributing income tax.

Further there are obvious difficulties in the way of separating stamp duties into two classes, commercial and non-commercial. It could only be done by means of a schedule and a large element of purely arbitrary selection would be involved. The simple constitutional solution would be to class all stamp duties as provincial sources of revenue.

We have given some attention to the question considered by the Federal Structure Committee whether the Provincial Governments should be given power also to fix the rates of duty on all stamps or whether legislation on this subject should be reserved wholly or partially to the Federal Government. We suggest that the Federal Government should retain the power to legislate on behalf of the Provinces in regard to those stamp duties which are the subject of legislation by the Central Government at the date of federation. The duties which are now the subject of central legislation are those on acknowledgments, bills of exchange, share certificates (cheques not now dutiable), delivery orders in respect of goods, letters of allotment of shares, letters of credit, insurance policies, promissory notes, proxies, receipts and shipping orders. We understand that proposals have been under consideration for adding other duties to this list and would suggest that if any such additions are contemplated that should be made before the establishment of the federation.

We ought to add in this connection, that difficulties already arise in estimating the share of each Province in the proceeds from the sale of postage stamps for use on taxed documents and these difficulties may be expected to lead to considerable friction with the Provincial Governments unless a more satisfactory system can be devised.

Finally, in proposing that the proceeds of commercial stamps should be assigned to the Units we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not however, wish to prejudge the possibility that as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax—From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco.—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex hypothesi* the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised, and as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired.

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties.—Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties, and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units; but clearly the facts would not justify reliance on them as a source of revenue in the near future.

Terminal Taxes.—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. As the arguments for and against this proposal have been so fully set forth in previous reports, it scarcely seems necessary to re-state them here. The feature of such taxation which has impressed us most seriously is its operation as, in effect, a surcharge on railway freights. Where municipal octrois are in force, there appears to be a tendency to substitute for the general levy of dues on all goods entering the municipal boundaries the simpler alternative of a terminal tax collected at the railway station, and there is already a danger that this habit may result in diversion of traffic to the roads. We therefore recommend that, if terminal taxes are to be regarded as a permanent part of the financial structure, they should be imposed by the Federal Legislature for the benefit of the Units. Such terminal taxes as are already in existence (mainly as municipal taxes) will fall into much the same category as other taxes classed as federal which, at the time of federation, are being levied by certain Units; but though it may be necessary for this reason to authorise the municipalities and Provinces concerned to continue to raise these taxes, they should be allowed to do so only within limits laid down by the Federal Legislature. Assam and Bihar

and Orissa are the two Provinces which, having few or no municipal taxes of the kind at present, are most desirous of deriving provincial revenue from this source. While we do not rule out the possibility of terminal taxes in these two Provinces and elsewhere as a temporary expedient, in view of the practice which has grown up in various parts of India, we are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Incomes.—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government.

We are aware of no reliable data for estimating the yield of such taxation.

Conclusion.—In this survey of possible sources of additional revenue, we have deliberately left out of account the question whether or to what extent it would be possible to increase the yield of existing taxes. We have confined ourselves to an examination of new sources, and in this field the results of our survey are not encouraging. We have found that such provincial taxes as appear to be within the sphere of practical politics in the immediate future cannot be relied on to yield any substantial early additions to provincial revenues. In using the phrase "practical politics," we are not, of course, expressing an opinion as to whether this or that tax ought or ought not to be imposed, or even as to whether it is or is not likely to be imposed by the legislatures of autonomous Provinces when these are constituted. We are only noting the fact that the opposition to certain forms of taxation, or the difficulty of their imposition is still so great that they are not likely to be adopted soon enough to influence the financial situation at the time when the Federation comes into being. In the federal sphere, the excise on matches is the only tax which we feel justified in taking into account as an immediate reinforcement of federal revenues.

Railway Finance.—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As explained in detail under the section Railways (*v. v.*) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways; it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving

effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance; a definite annual contribution from the railway revenues to the general revenues; and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits; further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgeting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

In the past few years, owing to the economic depression, the railways have been unable to make the contribution to general revenues.

I. RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (*v. v.* Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation.—Owing to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee, on the model of the Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Inchcape Committee. It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs 18 crores.

Financial equilibrium was established and a surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government since 1921-22.

In lakhs of Rupees.

Year.	Revenue.	Expenditure	Surplus (+) Deficit (—)
1921-22 ..	1,15,21	1,88,40	-27,65

(Budget)			

(a) Whole surplus placed to provision for reduction or avoidance of debt.

(b) Surplus to Earthquake Fund except for Rs. 62 lakhs for debt redemption.

II. THE PRESENT FINANCIAL POSITION.

India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs. 86 lakhs; the revised estimates worked up to a deficit of Rs. 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt. The main items of deterioration as compared with the Budget can be summarised as follows:—

	Lakhs.
Important revenue heads, viz., Customs, Taxes on Income, Salt and Opium (net)	12,10
Posts and Telegraphs (including the Indo-European Telegraph Department)	89
Finance headings, viz., Debt services, Currency and Mint.	1,38
Other heads	6
Total Rs.	14,42

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs. 13.16 crores, including a drop of Rs. 8 crores in Customs and 4½ crores in income tax. The total deterioration under Finance headings was Rs. 376 lakhs and on commercial departments Rs. 118 lakhs. This meant a total deterioration of Rs. 18.10 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs. 86 lakhs the net deficit would be Rs. 17.24 crores. To meet this deficit the Finance Member announced a cut of Rs. 175 lakhs in army expenditure and retrenchment to the extent of Rs. 98 lakhs in civil expenditure, making a total saving of Rs. 273 lakhs. The estimated deficit was reduced thereby to Rs. 14.51 crores, which he proposed to cover by fresh taxation.

New Taxation Proposals—His proposals were grouped under two heads, Customs and Income Tax. Referring to the first the Finance Member said: "The heads in respect of which I propose alterations of the substantive tariff itself, are liquors, sugar, silver bullion, betelnuts, spices and exposed cinematograph films. The liquor duties are to be enhanced appreciably; the duty on beer and the like is at present undoubtedly low relatively to those on other alcoholic beverages and will be raised by about 66 per cent. above the present level, while those on wines and spirits (except denatured spirit and spirit used in drugs and

medicines) will be raised by between 30 and 40 per cent. The duty on silver bullion I propose to increase from 4 to 6 annas per ounce. The other items mentioned will be transferred from the general rate of duty (now 15 per cent. *ad valorem*) to the "luxury" rate at 30 per cent. Of the surcharges, we have at a stroke added to the 10 per cent. schedule a surcharge of 2½ per cent., to the general or 15 per cent. schedule one of 5 per cent., and to the "luxury" or 30 per cent. schedule one of 10 per cent. By far the most important of these surcharges is that 5 per cent. on the general revenue schedule of 15 per cent., and connected with this, I must mention a feature of particular importance. We propose for this purpose to treat the basic duty of 15 per cent. on cotton piece-goods on the same lines as the general 15 per cent. schedule and to place the surcharge of 5 per cent. on these goods also. The surcharge on the 15 per cent. schedule is expected to yield 90 lakhs for cotton piece-goods and 2.63 lakhs for other goods. Coming now to the schedule of non-protective special duties, here we have made additions appropriate to the general scheme, and I need only mention specially the surcharges that I propose to levy upon kerosene and motor spirit. Both customs and excise duty on kerosene are to be raised by 9 pies per gallon, while motor spirit is to bear a surcharge of 2 annas per gallon. Finally, I must explain my proposals as regards sugar. The position is special, because, while I am now proposing an increase in the duty for revenue purposes, we had received, just when my budget proposals were on the point of completion, the recommendations of the Tariff Board for the protection of sugar. Summarised, the Board's recommendations are—(1) a basic duty of Rs. 6-4-0 per cwt. on all classes of sugar, including sugar (andy), to be imposed for 15 years, (2) an additional duty of Re. 1 per cwt. on all classes of sugar to be imposed for the first 7 years, (3) power to be taken to add 8 annas per cwt. to the duty at any time if the landed price of sugar at Calcutta ex-duty falls below Rs. 4 per maund; (4) no protective duty on molasses. My own proposals for revenue purposes had been very close to this, for I had actually contemplated an extra duty round about Re. 1 to Rs. 1-8-0 per cwt. What I have now included is an increase of Rs. 1-4-0 per cwt. on all grades of sugar. This, as I have said, must be regarded purely as a revenue measure pending consideration of the Tariff Board's recommendations. The combined effect of all these proposals as regards Customs duties will be to produce an additional revenue next year of 9.32 crores. We shall also obtain about 50 lakhs more from the increased import duties on galvanized pipes and sheets which the House discussed on 28th January last. This will raise the additional yield to 9.82 crores. Incidentally, the new duties, which will operate from 1st March, and the increased duties on galvanized pipes and sheets, which came into force on 30th December, will add to our revenue for the current year a sum estimated at 88 lakhs, thus reducing the current year's deficit to 12.68 crores."

Increased Income Tax.—Dealing with his proposed new tax on incomes, the Finance Member said: "The taxable minimum income for income-tax—Rs 2,000—will not be lowered. The rate of tax on the lowest zone up to Rs. 4,999 will be raised by 4 pies. The rates on higher grades up to Rs. 39,999 will be raised in some cases by 5 pies, in some cases by 6 pies, and in the highest of these grades by 7 pies. At present the highest rate is reached at Rs. 40,000. It is now 19 pies. I propose a rate of 25 pies on incomes from Rs. 40,000 to Rs. 99,999, and a maximum rate of 26 pies on incomes of Rs. 1 lakh and over. The estimated yield of these increases is 5.07 lakhs gross or, deducting 53 lakhs on account of increased refunds, 4.54 lakhs net. In addition to this, I propose certain changes as regards super-tax. At present all assesses except Hindu undivided families are allowed a deduction of Rs. 50,000 in computing the income liable to super-tax. This will be lowered to Rs. 30,000 except for Hindu undivided families and companies which will be allowed, as at present, a deduction of Rs. 75,000 and Rs. 50,000 respectively. In the new zone,

Rs. 30,001 to Rs. 50,000 the super-tax rate will be 9 pies. Above Rs. 50,000 the graduated scales will be increased by 2 pies throughout. The flat rate for companies will be 1 anna as at present. These changes will yield, it is estimated, 46 lakhs. Thus the total estimated additional net revenue from taxes on income will be 5 crores. Briefly they will add an extra charge of about 2 to 5 per cent. on all incomes. The rates of additional tax have been so adjusted as to produce, in the final result, an evenly graduated scale of burden increasing as the income increases, and this object must be borne in mind in interpreting our proposals. The total yield from the proposed changes in Customs duties and taxes on income thus amounts to Rs. 14.82 crores, as against which the gap to be filled is Rs. 14.51 crores, so that I am left with a small surplus of Rs. 31 lakhs.

Silver Duty.—Referring to silver, the Finance Member said the increase of two annas an ounce which we are proposing is estimated to produce 75 lakhs from the import duty and 7 lakhs from the excise or 82 lakhs in all.

WAYS AND MEANS.

The following is a summary of the estimates of ways and means in India during 1934-35 and 1935-36—

(In crores of rupees)			
	Budget, 1934-35.	Revised, 1934-35.	Budget, 1935-36
RECEIPTS.			
1. Excess of Revenue of the Central Government over Expenditure charged to Revenue.. ..	35.87	31.08	32.29
2. Unfunded Debt incurred—			
(a) Post Office Cash Certificates (net) .. .	5.50	2.78	2.75
(b) Post Office Savings Bank deposits (net) .	6.00	7.10	8.75
(c) Other Savings Bank deposits (net)	5.99	5.87	6.42
3. Appropriation for reduction or avoidance of debt.	3.00	3.00	3.00
4. Railway and Posts and Telegraphs Depreciation Funds .. .	— .35	1.49	2.08
5. Post Office Cash Certificate Bonus Fund ..	1.10	.74	— .25
6. Miscellaneous Deposits and Remittances (net) .	2.03	1.02	16.45
TOTAL RECEIPTS	55.78	55.67	69.57
DISBURSEMENTS.			
7. Capital Expenditure not charged to Revenue—			
(a) State Railways	2.96	..	3.50
(b) Posts and Telegraphs .. .	40	.34	.55
(c) Other Items	1.29	1.42	6.23
8. Permanent Debt discharged (net) ..	13.24	32.95	27.61

(In crores of Rupees)			
	Budget, 1934-35	Revised, 1934-35	Budget, 1935-36
9. Floating Debt discharged (net)	9.74	3.50
10. Loss on revaluation, sale transfer, etc., of assets of the Paper Currency Reserve (net)05	5.88	7.00
11. Loans by the Central Government—			
(a) To Provincial Loans Fund	6.00	4.00	10.25
(b) Other Loans	1.49	—15	—01
12. Remittances between England and India—			
(a) Remittance from India for financing Home Treasury	35.60	52.04	34.69
(b) Transfers through the Gold Standard Reserve and the Paper Currency Reserve	—17.87
(c) Sale of silver	3.87	4.00
(d) Other transactions (net)70	.99	.73
13. Balances of Provincial Governments	—2.91	—2 91	—2.71
TOTAL DISBURSEMENTS	58.82	90.30	96 34
NET DISBURSEMENTS	3 04	34.63	25.77
New Loan	35 80	25 00
Reduction (+) or Increase (—) of cash balance	+ 3.04	—1.17	+ 77
Opening Balance	13.44	11.89	13.06
Closing Balance	10.40	13.06	12.29

Reception by the Assembly—Strong opposition was manifested in the Assembly to the new income tax and super tax rates, and on the plea that Government's duty was to retrench expenditure still further, an amendment was passed reducing the proposed revenue from this source by Rs 240 lakhs. Government found themselves unable to accept this cut, and the Finance Bill was returned to the Assembly by the Governor-General with the recommendation that it should be passed with an amendment to the Finance Member's original scheme involving a reduction in the lowest grades of income tax and leaving the higher grades untouched. The estimated decrease in revenue was about a crore of rupees compared with nearly two and a half crores created by the Assembly's vote. The following were the rates recommended by the Governor-General:—

In the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or a company:—

	Rate.
When the total income is less than Rs. 2,000	Nil.
When the total income is Rs. 2,000 or upwards, but is less than Rs. 5,000	Six ples in the rupee.
When the total income is Rs. 5,000 or upwards, but is less than Rs. 10,000	Nine ples in the rupee.
When the total income is Rs. 10,000 or upwards, but is less than Rs. 15,000	One anna in the rupee.
When the total income is Rs. 15,000 or upwards, but is less than Rs. 20,000	One anna and four ples in the rupee.

	Rate.
When the total income is Rs. 20,000 or upwards, but is less than Rs. 30,000	One anna and seven pies in the rupee.
When the total income is Rs. 30,000 or upwards, but is less than Rs. 40,000	One anna and eleven pies in the rupee.
When the total income is Rs. 40,000 or upwards, but is less than Rs. 1,00,000	Two annas and one pie in the rupee.
When the total income is Rs. 1,00,000 or upwards	Two annas and two pies in the rupee.
In the case of every company and registered firm, whatever its total income	Two annas and two pies in the rupee.

The Bill in its recommended form was, however, rejected by the Assembly by 60 votes to 56, and was sent to the Council of State where it was passed. It became law on being certified by the Governor-General. The gap of Rs 105 lakhs caused by the amended income tax figures was partly filled by reduction of military expenditure to the extent of Rs 60 lakhs and by Rs. 15 lakhs cut in civil expenditure.

Other cuts made by the Assembly and accepted by Government included token reductions of Rs 100 in the demands for Customs, Income Tax, Executive Council and Army Department. Two cuts of Rs. one lakh and Rs. 100 were made in the Railway Board demand and were accepted.

Supplementary Budget.—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly with a Supplementary Finance Bill. The Finance Member said that the returns for the first five months indicated that they would fall short of their budget estimates for customs by at least Rs.10 crores, the heaviest reductions being under cotton piece-goods, sugar, silver, spirits and liquor, excise on motor spirit, iron and steel and in the jute export duty, while they expected a deficit of Rs. 1½ crores on income-tax. Income from Railways and Posts and Telegraphs showed a similar decline. The total deterioration in income amounted to Rs. 11.33 crores in tax revenue, Rs 5.43 crores on commercial departments, Rs.2.29 crores in general finance headings, Rs 23 lakhs under extraordinary receipts and Rs. 28 lakhs under other heads. As the budget provided for a small surplus of Rs. 1 lakh on the basis of the present estimates there would be a net deficit of Rs.19.55 crores. Putting the deficit for the current year and next year together they had a gap to fill of Rs 39.05 crores. He proposed to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency cut in salaries; and thirdly, to impose fresh taxation. Retrenchment measures in civil expenditure he estimated would save about Rs.30 lakhs in the current year, and Rs 250 lakhs next year, while military expenditure next year would be curtailed by Rs.450 lakhs.

A ten per cent cut in pay in both civil and military departments would lead to a saving of Rs. 60 lakhs in the current year and Rs.190 lakhs next year. Turning to new methods of raising revenue the Finance Member said his first proposal would be an immediate increase in the salt revenue by abolishing the credit systems which would mean that the revenue would be increased by a crore of rupees each year on this account. The main plank of his new taxation proposals was to put a temporary surcharge on all existing taxes with the exception of Customs export duties, the surcharge being 25 per cent on the existing rates in each case. He proposed that the surcharge for the current year in income-tax should only be 12½ per cent, but it would be collected at this rate on the whole year's income. Government held that in the present emergency they were justified in reducing the income-tax exemption limit and imposing a small tax of four pies in the rupee on incomes between Rs. 1,000 and Rs.2,000 per annum. Dealing with special increases and new taxes, the Finance Member said: "We propose to increase the import duty on artificial silk piece-goods from 20 to 40 per cent, and on artificial silk yarn from 10 per cent to 15 per cent. We also propose to increase the duty on brown sugar from Rs.6-12-0 to Rs 7-4-0 per cwt. This follows the Tariff Board's recommendation. As regards boots and shoes, we propose that there should be imposed as an alternative to the 20 per cent. duty a minimum of 4 annas per pair. The duty will thus be 20 per cent. or 4 annas a pair, whichever is the higher. We also propose to increase the duty on camphor and on electric bulbs from 20 to 40 per cent. As regards all these articles the surcharge will be levied on the increased duty."

"Then there are three items formerly on the free list on which we think it justifiable to impose a small duty on revenue grounds. The result of the surcharges imposed in last Budget and proposed now is that the level of the general revenue tariff has been increased from 15 to 25 per cent. There is, therefore, some justification for adding a 10 per cent. duty to articles hitherto free. We propose to put duties of 10 per cent. on machinery and dyes, and of ½ anna per lb. on raw cotton. I must expect criticism of these duties especially from the cotton mills, and I must

acknowledge that their imposition may appear to be in some ways inconsistent with previous policy. The justification must be the need for revenue, while as regards the cotton mills we may claim that on balance their position will be improved by our surcharge proposals, for under these the import duties on cotton piece-goods will be increased by one quarter. This more than offsets the burden of $\frac{1}{4}$ anna per lb. on goods made from imported cotton, and affords an effective answer to possible criticisms on the grounds to which I have referred. I have one more word to say as regards the income-tax proposals. In considering the cut to be applied to the salaries of Government officials we considered what total reduction of their emoluments could fairly be imposed. If the general rate of reduction is to be 10 per cent., that represents what we think fair, and if further increases of income-tax were to be added, that would go beyond the reasonable limit. We therefore propose that increases of income-tax both by way of surcharge on existing rates or by way of imposition of a tax for the first time on salaries from Rs. 1,000 to Rs. 2,000 should be merged in any general cut which we are imposing or which the Provincial Governments may impose."

The Finance Member's final proposal was to increase the postage for inland letters to $1\frac{1}{2}$ annas instead of 1 anna and for postcards to 9 pies instead of 6 pies. That enhancement was expected to produce Rs. 73 lakhs in a full year and go a long way to cover the deficit of Rs. 92 lakhs in the working results of the Posts and Telegraphs Department which would be left even if the recommendations of the Posts and Telegraphs Accounts Enquiry Committee were accepted.

The net result for the current year was an estimated increase in taxation of Rs. 711 lakhs which, together with Rs. 37 lakhs from increased postal charges and Rs. 100 lakhs from salt revenue, meant, with retrenchment measures, an improvement of Rs. 938 lakhs as against an estimated deficit of Rs. 19.55 crores. They would thus close the year with a deficit of Rs. 10.17 crores. On the other hand, in 1932-33 they would feel the full benefit of the retrenchment measures and the extra taxation, making a total improvement of Rs. 24.73 crores against an estimated deficit of Rs. 19.50 crores. They should thus close the year with a surplus of Rs. 5.23 crores. The combined result of the two years would be a deficit of Rs. 4.94 crores, which they were justified in regarding as covered by making during this period of exceptional stress a reduction of about Rs. 247 lakhs in each year for the provision for reduction or avoidance of debt.

Assembly Opposition.—The Finance Member's statement and fresh taxation proposals came as a shock to the Assembly, and strong opposition to certain sections of the Bill was manifested from the start. Most of the non-official members maintained that larger cuts in expenditure should be made, instancing the need for still further retrenchment in the Army demands. When the Bill was discussed clause by clause, a motion was carried placing mill machinery, etc., again on the free import list and the proposal to increase postal rates was rejected. Amendments to the income tax

increases were carried omitting the reduction of the minimum taxable income from Rs. 2,000 to Rs. 1,000, and making the 25 per cent. surcharge levied during 1932-33 applicable only to incomes over Rs. 10,000 per annum. When the discussion finished the Bill was returned to the Assembly with a recommendation by the Governor-General that it should be passed in its original form. Lord Willingdon pointed out that the amendments made by the Assembly would reduce the expected revenue by Rs. 4 crores over eighteen months, and added "I am satisfied that I cannot consistently with my responsibilities allow this deficiency to remain uncovered." The Bill as amended was, however, rejected by the Assembly by 63 votes to 48. It was taken to the Council of State where it was passed and was thereafter certified as law by the Governor-General.

The 1932-33 Budget.—Presenting the 1932-33 budget on March 7th, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931. On the basis of the supplementary budget in September it was hoped to reduce the deficit for the current year to Rs. 10.17 crores and for the following year to realise a surplus of Rs. 5.23 lakhs but experience had made it necessary to revise these estimates. A deterioration in the figures by about Rs. 3 crores was to be allowed for each year and it was anticipated that the current year would close with a deficit of Rs. 13.6 crores and that the surplus for 1932-33 would be Rs. 2.15 crores. The Finance Member reminded the House that for the current year and the next year combined no less than Rs. 13.71 crores was being provided from revenue for reduction or avoidance of debt.

Revenue Estimates.—The budget estimates for customs receipts in 1932-33 were put at Rs. 415 lakhs less than in the previous year in spite of the increased duties imposed by the emergency budget and which were expected to bring in an additional revenue of Rs. 94 crores. The main deterioration occurred under the heads of sugar, silver, cotton piecegoods and liquors. Referring to the revenue from the commercial departments the Finance Member said that no contributions from the railways were expected either in the current year or the next. As regards Posts and Telegraphs the loss in working in the coming year was expected to be about Rs. 16 lakhs.

Expenditure Estimates.—The total civil and not military expenditure in 1932-33 was estimated at Rs. 67.39 lakhs which was Rs. 11.84 lakhs less than for 1930-31 and Rs. 795 lakhs less than the current budget. On the subject of retrenchment the Finance Member said :

"For the present I would remind Honourable Members of the following broad facts, when to compare what we have achieved with the recommendations of the various Retrenchment Committees. The total recommended by the four civil Sub-Committees was Rs. 4.99 lakhs, and we have against this achieved economies

its 4.83 lakhs or nearly 87 per cent—before allowing for terminal charges which, of course, the committees did not take into account.”

“I would mention two other striking results in this connection. The first is the actual reduction in Expenditure. I have already given the figures from the accounts showing a reduction of 11.84 lakhs for Civil and Military Expenditure (excluding Posts and Telegraphs) since 1930-31. The position may also be stated in another way. If Honourable Members will look at the analytical table which is included in the Financial Secretary's memorandum (which is prepared now on a slightly different basis from that which I circulated in September) they will find that what I may describe as the net controllable administrative expenditure, civil and military (which excludes the cost of collection of taxes and of the administration of salt and Posts and Telegraphs expenditure) has been brought down from just over Rs. 76 crores in 1930-31 to just over Rs. 64 crores for 1932-33, a reduction of about 16 per cent.”

The second fact is of a more distressing nature, but it indicates the magnitude of the effect which we have made. In pursuance of the retrenchment campaign the following appointments in the Civil Departments (including Posts and Telegraphs) have been or will shortly come under reduction so far as information is at present available—

Gazetted officers	299
Ministerial establishment and other superior establishment	5,279
Inferior establishment	1,485
Total	7,063

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. The results for 1931-32 had turned out to be Rs. 2 crores better than anticipated in the budget speech and the account for the year showed a deficit after providing nearly Rs. 7 crores for the reduction of debt of Rs. 11½ crores. For the year 1932-33 the latest revised estimates indicated that the surplus would be Rs. 217 lakhs or Rs. 2 lakhs more than was estimated. He continued to estimate revenue for 1933-34—particularly customs revenue—is, in view of the completely uncertain and abnormal conditions, a task of quite unprecedented difficulty. Indeed I may say that accurate estimation is impossible. In these circumstances and for the reasons which I have explained, we have thought that the most reasonable course is to assume that the general position next year will be the same as for the current year, neither better nor worse, and in particular that India will be able to maintain the same purchasing power for commodities imported from abroad.

Customs.—The assumption, however, that the value of imports will be maintained does not necessarily imply that the value of the import duties will also remain the same.

I have already explained the special position as regards sugar, showing how the present development of the Indian industry is affecting

our revenue. On these considerations we think it necessary to allow for a drop of one crore in receipts from the sugar import duties which will not be offset by any increase under other heads.

In regard to cotton piece-goods also, for reasons which I have explained, we think it necessary to regard the revenue from import duties—at least on Japanese goods—as to some extent abnormal and not likely to be repeated. Here therefore we have allowed for a drop of 30 lakhs.

As against these reductions we have thought it safe to count on a small revenue (25 lakhs) from silver imports—because having closed the gap in our land customs line on the Burmese frontier, through which a large trade in silver from China was suddenly developing in the course of the last year, we think it reasonable to expect a moderate resumption of dutiable imports.

Making allowance for these and other minor variations, our customs revenue estimates for next year are put at 51.25 lakhs showing a reduction of 104 lakhs from the revised estimates of the current year.

The position as regards net receipts may be summarised as follows—

	Revenue (Lakhs).
Budget Estimate, 1932-33 ..	52,31 27
Revised Estimate, 1932 33 ..	52,28 55
Budget Estimate, 1933-34 ..	51,24 60

Civil Expenditure.—“The budget estimate of Civil expenditure for the current year (1932-33), i.e., excluding military expenditure, expenditure on Commercial departments and Debt services, was 20.65 lakhs. Our revised estimate now gives the figure as 20.89 lakhs. There is thus an apparent increase of 24 lakhs. But a closer examination shows that this increase, does not denote any increase in real expenditure, and, indeed, that the economy in recurrent expenditure has been greater than that which we promised. The figure of expenditure as shown in our accounts has had to be increased because special items amounting in all to 68½ lakhs, but the great bulk of which do not denote real expenditure, have had to be included.

“Under the other heads of real expenditure we shall have achieved during this year economies of Rs. 45 lakhs more than we promised. It may be remembered that in my budget speech in March last I stated that, broadly speaking, against a total retrenchment in expenditure of Rs. 499 lakhs recommended by the four civil sub-committees, Government had achieved economies of 433 lakhs, or nearly 87 per cent, before allowing for terminal charges which the committees did not take into account. The results according to the revised estimate for the current year which I have just given show that the actual economies achieved in normal expenditure amount to 45 lakhs more than this, that is to say, to a total of 478 lakhs, or nearly 96 per cent. of the amount recommended by the retrenchment committees.

“Turning to the estimates of expenditure under these civil heads for next year, I am glad to be able to report a still further improvement.

As compared with the current year with its budget estimate of 20,65 lakhs and the revised estimate of 20,89 lakhs, the estimates for 1933-34 are 20,53 lakhs, that is to say, a reduction of 36 lakhs on the current year in spite of the following facts; first, that we have allowed for reducing the cut in pay to 5 per cent. thereby incurring extra charges of 28 lakhs on these particular civil heads, secondly that we have to meet the normal increments in time scale pay which still involve an annual addition of something like 15 lakhs, and thirdly, that we have to meet new obligatory expenditure amounting to about 17 lakhs, the nature of which I shall shortly explain. If all these items are taken into account it will be seen that the total of the net reductions otherwise effected under the normal heads of expenditure amount to no less than 96 lakhs. Honourable Members may say that they are not concerned with this figure but only with the saving of 36 lakhs actually effected, but I have given these explanations in order to show how we are continuing the retrenchment effort and what a constant effort is required, "merely to prevent expenditure from growing."

Military Expenditure.—"When I turn to the provision for the Military or Defence Budget the results are equally, or even more, satisfactory. For the current year (1932-33) allowing for the full effects of the 10 per cent. cut in pay, the net budgetary allotment was Rs. 46.74 crores. For next year the net expenditure provided for in the estimates, after allowing for an extra charge of Rs. 52½ lakhs due to the reduction in the cut in pay to 5 per cent is Rs. 46.20 crores. That is to say although the pay bill is increased by Rs. 52½ lakhs the net expenditure is to be reduced by Rs. 54 lakhs."

Financial Summary, 1933-34.

REVENUE—	Rs. lakhs.	
	Better.	Worse.
Customs. —(Reduction due to fall allowed for in imports of sugar and cotton piece-goods)	1,04
Income-tax. —(Increase due to removal of exemption from surcharge on Government servants)	53	..
Salt. —(Reduction mainly due to termination of temporary increase in receipts on termination of credit system)	1,63
Opium	25	..
Finance heads. —Net changes including additional expenditure of 1 on account of part restoration of cut in pay	15
Commercial departments. —Net revenue	11
Miscellaneous. —(Reduction of 30 due to no provision being included in next year's estimates for Gain by Exchange)	45

EXPENDITURE—

Military : Civil heads. —Net reduction effected in spite of part restoration of pay out costing 79½ lakhs under these heads as compared with the revised estimates. (This net reduction together with the reduction of 5 under Irrigation and Currency and Mint taken on the revenue side gives a total reduction of 90 as mentioned in para. 61)	85	..
Total	163	338

As a result of the changes thus summarised the net deterioration for next year is estimated at 175 lakhs, and thus the surplus of 217 lakhs shown in the revised estimate for the current year will be reduced to surplus of 42 lakhs.

The Cut in Pay.—Concerning the Government's decision to restore half the cut in pay the Finance Member said that the total cost was Rs. 108 lakhs.

As against this the Central budget will recover as a result of the withdrawal of the exemption of income-tax surcharges and the tax on incomes below Rs. 2,000 from Government officials—not only officials paid against the Central budget, but officials of the Railways and officials serving under the Provincial Governments—a net increase in income-tax receipts of 53 lakhs.

The net cost of the proposal to the Central Government is thus 55 lakhs.

Changes in Duties.—The budget announced changes in the import duties on boots and shoes and artificial silk goods.

Decisions.—The Assembly threw out the proposal for a stamp duty on cheques and by 59 votes to 33 carried a resolution to reduce the rate of income tax from 4 pies to 2 pies on incomes between Rs. 1,000 and Rs. 1,500.

The 1934-35 Budget.—Summing up the results for 1933-34 when introducing the 1934-35 budget the Finance Member said that with the arrangement to provide Rs. 3 crores for debt reduction instead of the Rs. 6.89 crores due under the debt reduction convention the year would close with a surplus of Rs. 129 lakhs. This sum Government proposed to set aside as a special fund to cover relief measures in respect of earthquake damage. For 1934-35 Government were expecting a drop of Rs. 280 lakhs in revenue which was more than accounted for by the anticipated falling off in sugar import duties, while expenditure would be Rs. 2 lakhs higher. In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs. 153 lakhs.

A loss in import duties of 225 lakhs was anticipated.

Other Revenue.—The changes in other heads of Revenue do not call for any detailed comment. We are allowing for a slight recovery of 12 lakhs in Taxes on Income to a total of 17½ crores, and we should have put this 25 lakhs higher if it had not been for the losses which must be anticipated from the earthquake. We are also allowing for an increase of 18 lakhs on salt and for a drop in the gross receipts from Opium of 64 lakhs. The declining revenue from the latter item owing to the policy adopted in 1925 has been another cause of budgetary difficulties. Altogether the total drop to be allowed for in Revenue as compared with the Revised estimates for the current year is 2,74 lakhs, which is more than accounted for by the loss on sugar.

Expenditure.—On the subject of expenditure Sir George Schuster said :—

So far as concerns expenditure, we are still searching for further economies, and have rigidly maintained our rule that no new item of expenditure shall be admitted unless it is absolutely obligatory or unless it is likely to be economically productive. We have also, as I have already announced, decided that the 5 per cent. cut in pay ought to be retained for another year. As a result there is a very satisfactory reduction of 2,12 lakhs in the Budget provision for next year as compared with the Budget for the current year, and of 2,90 lakhs as compared with the actuals for last year (1932-33) for, while expenditure on Civil Administration has been kept practically unchanged in spite of the normal increments in pay, there is a substantial saving on interest charges due to conversion schemes and the improvement in Government credit, while the military contribution from His Majesty's Government means a big reduction in the Army Budget.

The demand under the Defence head stands for next year at 44.88 crores. This is 4 lakhs less than the Revised estimates for the current year and 1,82 lakhs better than the Budget estimate. The latter big reduction is of course due to the payment now made by His Majesty's Government as a result of the finding of the Capitulation Tribunal, to which I have already referred. The House is fully informed as to the facts in this case, and I need not add further explanations, but I wish to take this occasion to review the course of military expenditure during the period of my office as Finance Member. The salient fact is that the total demand has been reduced by no less than 10.72 crores, from 55.10 crores in 1929-30 to the present figure of 44.88 crores. This is a remarkable reduction and I venture to think that if I had prophesied its achievement in 1929, my prophecy would have been greeted either with incredulity or, among those who gave credence to it, with extreme satisfaction. In the debates at that time the great demand was always that we should get Defence expenditure down to the so-called Inchesape figure of 50 crores. Yet now we are nearly six crores below that.

Debt Services.—Regarding the interest on debt, the Finance Member said :—It is a notable fact that the net figure for 1934-35 under Interest on Ordinary debt is less than

nothing—in fact a surplus balance of about 1 lakh. This is a reduction of 1,17 lakhs on the budget for 1933-34, though it is actually about the same as for the revised estimates. The comparison is complicated by the position as regards war debt payments. In the budget of 1933-34 we provided 88 lakhs against this liability, but as no payment was made this amount was saved, and, as I have already explained, is the main reason for the saving on the revised estimates. As regards 1934-35, His Majesty's Government has already agreed to the postponement of the instalment due in June 1934, but we have made provision for the second half year's instalment, and we have also assumed that the outstanding arrears, excluding the amount in suspense, will be capitalised and the total discharged by equated payments ending 1952 to cover principal and interest. On this basis we are making provision for 58 lakhs in the 1934-35 budget. Excluding these War Debt provisions the comparison between 1933-34 and 1934-35 works out as follows :—

1933-34 Budget	.. 28 lakhs.
1933-34 Revised	.. Nil.
1934-35 Budget	.. —50 lakhs (i.e., net surplus).

There is thus really an improvement of 87 lakhs on the budget for 1933-34 and of 59 lakhs on the Revised.

Under Interest on Other Obligations there is an increase in the budget provision for 1934-35 of 72 lakhs over the budget for 1933-34 and 68 lakhs over the Revised estimate. This is accounted for by an extra charge of 50 lakhs in respect of bonus on Post Office Cash Certificates, while the balance represents mainly interest on the increased amount of Post Office Savings Bank deposits.

I might sum up the result by saying that as regards interest charges, including both interest on Ordinary Debt and interest on Other Obligations, we have to provide next year 45 lakhs less than was allowed for in the budget of 1933-34, but 68 lakhs more than we are allowing in the revised estimates, and that as against the latter increase we are providing 58 lakhs more on War Debt and 50 lakhs more on Post Office Cash Certificates.

Changes in Duties.—The Finance Member announced the imposition of an excise duty on sugar in the following words :—

After careful consideration we have decided to propose a dual policy : on the one hand the imposition of an *excise duty on factory produced sugar*, and on the other hand the introduction of legislation by the Central Government which will enable the Provincial Governments to apply schemes for enforcing a minimum price for cane to be paid by the factory to the grower. As I have already stated, the present duty of Rs. 9-1-0 per cwt is Rs. 1-13-0 above the basic duty of Rs. 7-4-0 recommended by the Tariff Board. In their report, however, the Tariff Board recommended that there should be power for Government to increase the measure of protection by 8 annas per cwt. when Java sugar was being imported at a price less than Rs. 4 per maund to Calcutta. We propose to

assume that the conditions justifying this extra margin of protection are likely to continue in existence for the present, and therefore to leave a protective margin of Rs 7-12-0 per cwt. and to impose an excise duty of Rs. 1-5-0 per cwt. We assume that this will yield Rs. 1,47 lakhs, and out of this we propose to set aside an amount equivalent to 1 anna per cwt., representing about 7 lakhs, as a fund to be distributed among the Provinces where white sugar is produced for the purpose of assisting the organisation and operation of co-operative societies among the cane growers so as to help them in securing fair prices, or for other purposes directed to the same end.

Tobacco Duties—The Finance Member said.—

Under our present tariff, as modified by the two surcharges, the duty on cigarettes works out at something like double the duty on the tobacco used in making similar cigarettes in India; and the result has been to divert the manufacture of the great majority of the leading brands of cigarettes to factories in India belonging to the same interests as previously imported these brands from abroad. Such an industrial development has never made a claim—and I do not think it could make a good claim—that it satisfies the principles of discriminatory protection and should therefore receive abnormal encouragement from the tariff. We have now decided to fix the relation between the duty on cigarettes and the duty on raw tobacco on a more rational basis, and we have considerable hopes that, while not depriving the interest concerned of reasonable assistance, it will bring back the class of cigarette concerned into the field of open competition between the imported and locally made article, and result, without detriment to the interest of the consumer, in some increase of revenue from import duties. We propose to take for cigarettes a specific duty roughly corresponding to the identical amount that would have been paid on the quantity of leaf contained in the cigarettes and to add to this specific duty the normal revenue duty of 25 per cent *ad valorem*, thus leaving the local industry with no more than the benefit which is enjoyed by every non-protected industry engaged in the manufacture of goods which are subject to our present normal revenue duty of 25 per cent. The details are as follows.

At present what I may call the basic rate of duty on cigarettes is Rs. 10-10 per thousand, while there are smaller classes which are assessed at Rs. 15 and Rs. 8-8 per thousand, the division between these classes being dependent upon values. The present rate of duty on raw tobacco is Rs. 2 per lb. standard and Rs. 1-8 preferential (Imports entitled to the benefit of preferential duty are negligible). The revised rates that we propose are—

On raw tobacco: Rs. 2-6-0 per lb. standard and Rs. 1-14-0 per lb. preferential.

On cigarettes: Rs. 5-15-0 per thousand *plus* 25 per cent. *ad valorem*.

Silver.—A reduction in the silver import by 2½ annas to 5 annas per ounce.

The Finance Member said to-day we think we can lower the duty without risk of doing so.

Taking the prices of silver which have been ruling recently in London (about 19½d. to 20½d. per standard ounce), the prices in Bombay have been ruling round about Rs 55 per 100 tolas as against 19½d. per ounce in London. On the basis of a London price of 19½d. was calculated that the parity price in Bombay allowing for import duty and other charges, ought to be Rs. 61-11-9 per hundred tolas, so that it looks as if the Bombay prices have been keeping at a level at least Rs 6-11-9 per 100 tolas below the full parity. The duty of 7½ annas per ounce is equivalent to Rs. 17-9-3 per 100 tolas. It appears therefore that we might reduce the duty by one-third, *i.e.*, by 2½ annas per ounce without thereby necessarily affecting the Bombay price at all, for it would still be somewhat below the London parity.

Export Duty on Hides.—The export duty on raw hides was abolished by the 1934-35 budget.

Excise on Matches.—Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs. 2-4-0 per gross of boxes on matches made in British India.

Decisions.—The Assembly accepted the whole of the financial plan except to the extent that Government themselves accepted a change in the match excise duty. The changes as summed up by the Select Committee which examined the Bill were—“The most important question which confronted us was whether the duty as fixed by the Bill would so react on the retail selling price of matches as to bring about a very serious diminution of sales. In order to avoid this it seemed to us essential that the duty be so regulated as to make it possible a reasonable sized box of matches retailed singly in bazaars at the price of one pice.

After very careful consideration we have come to the conclusion that if this result is to be achieved and a sufficient margin of profit left for retailers and manufacturers, the rate of excise duty initially, at least, should not be fixed higher than one rupee per gross of boxes containing on average 40 matches.

We hold that the duty could be fixed at corresponding rates for matches in boxes of 60 or 80, and that the classification of matches according to these standards is most suitable and convenient from the administrative standpoint.

From matches packed otherwise we have left the duty to be fixed by the Governor-General-in-Council.”

Posts and Telegraphs.—The following changes in postal and telegraph charges were announced:—

Postal.—(a) In the postal tariff we propose to lower the initial weight of inland letters from 2½ tolas to ½ a tola coupled with a reduction in the charge from 1½ anna to one anna. For heavier letters the charges will continue to be 1½ anna for letters not exceeding 2½ tolas, with additional ½ anna for successive weights.

of 2½ tolas or fractions. This change introduces a lighter unit of weight and will undoubtedly benefit the poor citizens and the business community. Allowing for a recovery of 10 per cent. in traffic we estimate that in the first year this reduction will involve a loss in revenue of 27 lakhs, but we have good reasons to hope that in the second year this loss will practically disappear, and that thereafter there will be a gradually increasing net gain.

(b) As a second change in postal charges we propose the remission of the extra pice per five pice embossed envelope which was imposed in 1931 to recover the cost of manufacturing the envelope. This is more of the nature of an administrative reform considered necessary on general grounds than a regrading of the rate, but it is again a reform which will benefit the ordinary citizen. We estimate a loss of revenue of two and a half lakhs from this change.

(c) Thirdly, as regards Postal rates, we propose a small change in a contrary direction, namely, that the initial charge on inland book packets not exceeding 5 tolas in weight should be raised from 6 to 9 pies. The book packet method of transmission is undoubtedly being abused, and a change is urgently necessary to stop the diversion, with consequent loss of revenue, that is occurring of post card traffic to the book packet category. We estimate a gain of a little over 5 lakhs in revenue from this change.

Telegrams—The last change which we propose is as regards Telegrams. Instead of having, as at present, a minimum charge for ordinary telegrams of 12 annas with a surcharge of one anna for a message of 12 words, we propose to introduce a minimum charge for a telegram of 8 words of 9 annas, while that for an express telegram of the same length will be one rupee and two annas. For each additional word in the two classes of telegrams the additional charge will be one and two annas respectively. We estimate a loss during the first year of 3 lakhs from this change, but here also, as in the case of the postal rates, we hope that in the second year this loss will disappear, while without making this change we consider that there is a prospect of a continuous decline in telegraph receipts.

The 1935-36 Budget—This Budget is expected to show a surplus of Rs 150 lakhs available for tax reduction. Before dealing with this issue the Finance Member said that he must mention three items—

Additional Import Duty on Salt—The first of these is the additional import duty on salt. Personally I am very doubtful whether this duty can ever achieve the purpose for which it was designed. I have moreover a good deal of sympathy with the views which have in the past been expressed by Hon'ble Members from Bengal that an impost which has the effect of helping the producers of Aden at the expense of the consumers of Bengal is fundamentally unfair. In any case the duty will require consideration in view of the impending separation of Aden and Burma. Taking all these things into consideration I was disposed to think that the duty ought to be abolished at once but that would perhaps have been a little harsh to the vested interests which have

grown up and I shall therefore propose to the House that the duty shall be extended for one year, without prejudice to any action which Government may see fit to take at the end of that year. I hope that this extension will be accepted by the House though I should perhaps make it clear that, if it should prefer to remove the duty at once, in this matter at any rate we should accept its decision. Incidentally we do not propose to make any change in the arrangements for the distribution of the proceeds of the duty.

Silver—The next is silver and here we propose to reduce the duty to 2 annas an ounce. This action is dictated by no theory as to the place to be taken by silver in the monetary economy of the world nor has it any connection with the view sometimes expressed that India should be encouraged to build up her hoards of the metal. It is simply a matter of business. There is no doubt at the present level the duty is encouraging smuggling, there is no doubt that the smuggling is extremely difficult to prevent and there is no doubt that the honest trader is being injured by the illicit trade which is being carried on. At the lower level which we now propose smuggling should become unprofitable and the honest trade will come into his own. I propose to assume that we shall get the same yield from the 2 annas as would have been obtained from the 5 anna duty which is, I think, fully justified by the circumstances in which the reduction is taken place. The reduction will take place immediately by notification.

Export Duty on Skins—The third change of a minor order is the abolition of the export duty on raw skins. During the eight months ending 30th November 1934 the export trade in raw skins declined in volume, as compared with the corresponding period of the previous year, from 13,143 tons to 8,938 tons and in value from Rs 2,24 lakhs to Rs 1,19 lakhs. We all believe of course that the most necessary factor in India's economic recovery is revival of her export trade. Many of us feel angry and humiliated at our inability to suggest any positive action designed to promote that end apart from international action of a kind which is not at present likely to be taken, namely, a general agreement to reduce tariffs and quotas. But here is one case, though unfortunately only a small one, where some action is possible within the bounds of our available resources and I think that it should be taken. The change will take place as from the 1st April and the loss of revenue will be Rs 8 lakhs.

Reduction of Taxes on Income—We still have Rs 1.42 lakhs left to dispose of and I propose to do this in accordance with the pledge of my predecessor in which he said "Relief must come first in restoring the emergence cuts in pay and secondly in taking off the surcharge on the income-tax now to be imposed."

Although the tax on smaller incomes was not strictly a surcharge, it does, I think, come within the spirit of the pledge and I propose to deal with it and the surcharges on income-tax and super-tax together. The removal of the surcharges altogether would cost Rs 3.34 lakhs a year

while the removal of the tax on incomes between Rs. 1,000 and Rs. 2,000 would cost a further Rs. 75 lakhs. Clearly with a surplus of Rs. 1.42 lakhs only we cannot remove the whole of the two surcharges and the quasi-surcharge but what we can do is to reduce them by one-third and this is what I in fact propose. The cost will be Rs. 1.36 lakhs leaving us with a purely nominal surplus of Rs. 6 lakhs."

Treatment of 1934-35 Surplus.—The surplus for 1934-35 turn out to be much larger than originally budgeted, totalling Rs. 389 lakhs. Of this sum the Finance Member said —

"We consider that the needs of the rural areas should have the first claim on this and we have decided to set aside a sum of Rs. 1.00 lakhs for distribution to the provinces to be spent on schemes for the economic development and improvement of such areas."

Schemes have been examined and worked out but unfortunately many of them are still merely paper schemes, for even before the financial stringency of recent years some Local Governments could only devote very inadequate funds to those purposes and in the recent years of crisis and retrenchment it has been impossible for any Local Government to find money for new projects however likely they were to contribute to the prosperity of the province.

I have used the expression economic development and improvement of rural areas and I have indicated that I use that expression in a wide sense to cover any measure which will conduce to the amelioration of the conditions of the cultivators and rural classes. One such measure is the Co-operative Movement and we have for the last 7 or 8 months had an expert on duty under the Central Government to examine how the movement stands. Mr. Darling who has acquired great experience of the movement in the Punjab has been touring round the provinces discussing the question with Local Governments and Provincial Registrars. We propose to earmark a sum of Rs. 10 to 15 lakhs out of the crore which I have mentioned and this, we hope, will enable governments to develop the movement on sound financial foundations. Details of the measures and the conditions on which the grants will be given will be settled after we have considered Mr. Darling's Report.

As regards the remaining Rs. 85 to Rs. 90 lakhs I do not propose at present to define very closely the terms on which it will be distributed to the Provinces or the purposes for which it will be used. I may, however, say that we shall probably adopt the basis of rural population for distribution and we shall certainly impose the two following conditions —

- (1) that the grant should be spent on schemes approved by the Government of India which will improve the economic position of the people, and
- (2) that it will be devoted only to schemes which the Local Government would not otherwise have been able to undertake in the immediate future.

Roads.—We also propose to make a special contribution of Rs. 40 lakhs to the Government of India's reserve in the Road Development

Fund. There is obviously great scope for expenditure on road development, and I am very glad to be in a position to supplement the somewhat exiguous resources of the Road Development Fund reserve, which was designed, as Hon'ble Members are aware, for the purpose of making grants towards works of special importance or to specially necessitous parts of India. The Government have drawn up a programme for the expenditure of the additional sum now available and in this prime consideration is being given to the needs of the Province of Assam, which seems to me to be about the most necessitous of all the provinces.

North-West Frontier Roads.—A further sum of Rs. 25 lakhs we propose to set aside for schemes of development in the North-West Frontier Province. Most of this will be spent on the construction of roads in the tribal area and the remainder will be devoted to schemes of economic development in that area. I wish to make it clear that we have no intention of implementing this policy by force or without the consent of the tribes in whose territory the roads will be constructed.

A petition has already been received from the Afridis asking that a road may be constructed through a small area in Tirah and it is hoped that this development may lead to a fuller recognition not only by this important tribe but also by others of how their true interests are served by improvement of their communications with British India.

It is considered that from the point of view of Government this expenditure, which probably be spread over several years, is fully justified both on financial and political grounds. As the House is aware the relations between the Frontier tribes and Government have not always been peaceful and very large sums have been expended from time to time upon military operations of a punitive and wholly unproductive nature. We hope that by improving communications and by assisting the tribes to become economically self-supporting we shall not only avoid the necessity for such operations in future but shall transform in course of time a potential danger into a source of strength to India.

Broadcasting.—The last item of special expenditure which I have to mention in this connection is a provision of Rs. 20 lakhs or the development of Broadcasting. As has already been announced, it is proposed shortly to construct a large transmitting station in Delhi, and we hope later to undertake the construction of a similar new station at Madras. The existing stations at Calcutta and Bombay are also in urgent need of improvement and extension. Broadcasting is of course an immensely important factor in the intellectual and cultural development of a country and India cannot afford to fall too far behind in this matter.

After these special grants have been made there should remain a balance of Rs. 2.04 lakhs. A large part of this sum I propose to put aside for two schemes which it was provisionally decided to finance from capital. These are the civil aviation programme, which is expected to cost Rs. 83 lakhs, and the transfer of the Pusa Institute to Delhi which will cost about

Rs. 36 lakhs. I was not myself very happy about the decision to charge to capital these two schemes, which are certainly not in any strict sense of the word remunerative. And now that we have an accrued revenue surplus it seems to me sound policy to use part of it for these purposes and to avoid the creation of what might have become an awkward precedent. The remainder of the surplus amounting to Rs. 75 lakhs will now go as an additional allotment for the reduction of debt and this concludes the disposal of the sums which we expect to have in hand on the 31st March next."

Revenue in 1935-36—Concerning the revenue for 1935-36 the Finance Member said:

"The total revenue, excluding Railways, may be at Rs 90.19 lakhs or Rs 91 lakhs less than that the revised estimate for the current year.

Customs, etc.—Here I estimate for Rs. 51.92 lakhs altogether or an increase of Rs. 75 lakhs over the revised figures for the current year. The main variations are a decline of Rs. 2 crores on the import duty on sugar combined with increases of Rs. 35 lakhs on the sugar excise and of Rs. 65 lakhs on the match excise and of Rs. 43 lakhs on kerosene and Petrol. It is of course a matter of great difficulty to frame an accurate estimate of customs, etc., revenue at a time when there are so many uncertain factors at work. This uncertainty applies in a particular measure to the sugar duties. As I have already stated, our estimates for the current year have been revised to show an increase of Rs. 1.70 lakhs in the import duty and a decline of Rs. 32 lakhs in excise—the original figures being Rs. 2.05 and 1.47 lakhs respectively, and the revised Rs. 3.75 and 1.15 lakhs. We cannot, however, anticipate that the revenue from the import duty will remain at so high a figure in 1935-36 and the increased revenue to be expected from the excise duty will by no means compensate for this inevitable reduction.

During the period when Indian factories were not working at their full strength, imports have been substantial, but when Indian production reaches its full level, imports of foreign sugar for ordinary consumption will almost disappear, and there will only be certain small imports of the finer varieties of sugar. This process may not, however, be completed during 1935-36 and the best forecast we can make is to assume an import revenue of Rs. 1.75 lakhs and an excise yield of Rs. 1.50 lakhs. The increase in petrol and kerosene is due to normal growth and that in the match excise merely represents a full instead of a part year's yield of the duty.

Taxes on Income.—During the current year there has been an undoubted improvement in the financial position of some of the more important industries, but this improvement will only be partially reflected in our Income-tax returns for 1935-36. I therefore estimate for an improvement of no more than Rs. 51 lakhs and of this Rs. 16 lakhs is due to the additional tax recovered from Government servants on account of the restored pay-cut. The actual figures are Rs. 17.25 lakhs for the current year and Rs. 17.76 for 1935-36.

Opium.—Our estimate under this head is Rs. 61 lakhs as compared with Rs. 71 lakhs for the current financial year. This is based on the assumption that only 257 chests of opium will be exported during 1935-36. As Hon'ble Members are aware, this source of income will practically cease at the end of the present calendar year in accordance with the policy which was announced some years ago by the Government of India, and in future we shall recover only the cost of opium sold for consumption in India.

Interest.—This shows a very large reduction amounting of Rs. 1.29 lakhs which is of course due to the transfer of the currency function and, therefore the reserves, of the Government of India to the Reserve Bank. It is true that as against this we shall get the surplus profits of the Bank but in the first year instead of getting a full year's interest on the assets in our various reserves and balances we shall only get a part year's dividend from the profits of the Bank. We have included Rs. 50 lakhs on this account under the head "Currency" but the receipts here still show a drop of Rs. 11 lakhs owing to the lower rates prevailing for short term money."

1935-36 Expenditure.—"Expenditure as a whole, again excluding Railways stands at Rs. 88.69 lakhs showing an increase of Rs. 96 lakhs which is of course almost entirely due to the restoration of the pay cut.

The cost of restoration will be Rs. 55 lakhs for the Civil Departments, excluding the Railways but including the Posts and Telegraphs Department, and Rs. 53 lakhs for the Army, a total of Rs. 1.08 lakhs, but there is as I have said, a set off against this in the form of extra income-tax to the extent of Rs. 16 lakhs.

Apart from the pay cut, there are only minor increases, most of them on new services, e.g., the marketing scheme, grants to the handloom and sericultural industries, the new Dairy Institute and the Institute of Industrial Research. There is also a small increase on Defence and a deficit on Posts and Telegraphs, which is however, more than explained by the abolition of the pay cut.

Defence.—The Defence Budget shows an increase, leaving out of account the pay cut, of Rs. 7 lakhs over the original estimate for this year but the partial restoration by His Majesty's Government of the pay cuts of British soldiers which has necessarily to be applied to British soldiers on the Indian establishment, accounts for Rs. 5 lakhs of this. The purely nominal increase of Rs. 2 lakhs which remains conceals however a considerably increased provision for necessary services and re-equipment which had to be postponed during the financial emergency.

In his budget speech last year my predecessor again communicated to the House a warning previously given that the large reduction in Defence expenditure in recent years had been secured to some extent by emergency measures of a temporary character and that the figure of Rs. 44.38 crores could not be regarded as

representing a new permanent level of Defence expenditure. The contingency then foreseen has become a fact and new or rather postponed services amounting to Rs. 67 lakhs have had to be provided for. This sum has been found as to Rs. 20 lakhs by closer estimating for grains and other foodstuffs and as to the remainder by economies in other directions.

My predecessor also stated that His Excellency the Commander-in-Chief had undertaken that he would not relax his search for further economies and I think it will be agreed that the figures I have given demonstrate that this undertaking has been amply fulfilled.

Honourable Members will remember that I said we now expected a surplus on the Posts and Telegraphs accounts, or 1934-35 amounting to Rs. 14 lakhs but that this result, was only achieved in consequence of a raid of about Rs. 27 lakhs on the Depreciation Fund. At the time of this raid my predecessor explained that this could not be repeated in toto but that the whole question of the amount of the annual contribution to the Fund was under review. The final results of this review are not yet available but it is clear that the amount to be provided need not be so high as under the old rules by something like Rs. 10 lakhs. There is here therefore a deterioration in the estimates for 1935-36 as compared with 1934-35 and it is one of Rs. 19 lakhs and not one of Rs. 27 lakhs. When we add to this the cost of restoring the pay cut for the Posts and Telegraphs Department viz., Rs. 27 lakhs, we get an initial disadvantage of Rs. 46 lakhs to be made up. We are however estimating for a deficit not of Rs. 32 lakhs but of Rs. 13 lakhs which means that comparing like with like we reckon a net improvement of Rs. 19 lakhs.

Reduction of Debt.—There is only one other item which I wish specifically to mention at this stage and that is the provision for the reduction and avoidance of debt. As Hon'ble Members are aware, our revised estimates for 1933-34 and those for the current financial year included only Rs. 3 crores for this purpose. It is of course a matter of common knowledge that 60 per cent. of the Government of India debt is attributable to the Railways and it seems to me that it would be imposing too heavy a burden on the general Budget to revert to the Sinking Fund arrangements in force prior to 1934-35 before the Railways have resumed the practice of making a contribution to the General Revenue. I therefore accept as reasonable for the time being the provision of Rs. 3 crores now prevailing but I should like to make it clear that, in my view, an increased provision for debt reduction ought to be a first charge on any contribution from the Railways in the future.

Borrowing.—On this subject the Finance Member said.

"We have issued two loans in India during the current year. The first was a re-issue of $3\frac{1}{2}$ per cent. loan 1947-50 at 98/38 per cent and the amount subscribed was approximately Rs. 25.13 lakhs. A few months later owing to the continued improvement in our credit

we were able to issue a rupee loan at a nominal rate of 3 per cent. for the first time since 1896. The 3 per cent. bonds 1941 were issued at 99 per cent and the amount subscribed was Rs. 10.67 lakhs. As a result of these new loans we have been able to repay Rs. 19.48 lakhs of 4 per cent. loan 1934-37 and Rs. 12.94 lakhs of $4\frac{1}{2}$ per cent. bonds 1931. Both of the new issues stand well above their original price.

Next year we shall have to provide for the repayment of Rs. 16 crores of $6\frac{1}{2}$ per cent Treasury Bonds, 1935, and Rs. 11.4 crores of 7 per cent Bonds 1935. We have also the option of repaying £11.9 millions of 6 per cent Sterling Bonds, 1935-37 and £3 $\frac{1}{2}$ millions of East Indian Railway $4\frac{1}{2}$ per cent debenture stock 1935-35. The total amount of loans which we can repay or convert is thus approximately Rs. 48 crores. In addition to this we are, as I have just said, providing for the repayment of the Bombay Development Loan, 1935, and we expect to reduce the total amount of treasury bills outstanding by a further Rs. 34 crores.

Allowing for a remittance of £26 million we anticipate that we could meet all these liabilities without raising more than Rs. 25 crores by fresh borrowing, but of course the amount, time and manner of our borrowing will depend entirely on market conditions during the year."

Decision.—The Finance Bill was subjected to a protracted debate in the Legislative Assembly. Several amendments designed to reduce the scale of taxation proposed by the Finance Member were made, and the House accepted three amendments emanating from the Congress Party. These three amendments, which together had the effect of making a cut of about four and a half crores of rupees in the Budget sought to reduce the salt duty from Re. 1-4 to 12 annas (which would have meant a loss of three and a half crores of rupees), to exempt incomes of less than Rs. 2,000 a year from payment of income tax (which would have cost Rs. 50 lakhs), and to lower postal rates by providing for a return to the half-anna postcard and the one anna letter (which would have cost Rs. 76 lakhs).

On April 5, His Excellency the Viceroy returned the Finance Bill to the Assembly with the recommendation that it should be passed in the original form. This the Assembly declined to do by rejecting the Finance Member's motion for the restoration of the salt duty to Re. 1-4, by 64 votes to 41.

The Finance Bill was thereupon certified by the President and sent to the Council of State in its original form. Several amendments to it were to have been moved by members of that House, but when it was learned that the Viceroy had no power to accept amendments made by the Council of State in the certified Bill, the amendments were not moved although members of the Progressive Party voted against certain proposals of the Finance Bill. The Bill in its original form was then passed, and with the addition of the Viceroy's Signature, it became law.

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater

rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers; the assessments proposed by him require the sanction of the Government before they become finally binding; and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zamindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct; in *Zamindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, *ryotwari* tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment of all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary

settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted—(1) In *Zemindari* tracts progressive moderation is the key-note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) In the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) In *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*, (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people, (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act,

passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the *Zemindars*, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual; whereas under a *Zemindari* or kindred system the State would have gained nothing, however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurangzeb from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing); Baden Powell's "Land Systems of British India"; Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M Joseph Chailley's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Governments.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of Intoxicating Liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development

to the imposition of Still-head duty. Briefly stated the stages of development have been—First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

Reforms.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21.

From that consumption reduced to proof gallons. 10 per cent. is deducted in the case of shops in Bombay City and 5 per cent. elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (q.v.). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether male or female cultivated or unculti-

vated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April, 1922. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1923 by 10 per cent. annually in each subsequent year until exports are totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply; rock salt from the Salt range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted

and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems,

In the Punjab and Rajputana the salt manufactures are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactures are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Rs 1 and in 1916 it was raised to Rs. 1-4-0. The successive

reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs 2-8. In 1924 it was reduced to Re. 1-4-0. The duty remained at Rs 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent.; but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were re-imposed, yarns and cotton fabrics being excluded. Continued financial stringency brought piece-goods within the scope of the tariff, and after various expedients the demands of Lancashire were satisfied by a general duty of 8½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand-looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1910-11, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum, tobacco, wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since was raised to 7½ per cent. *ad valorem*, except in the case of sugar; as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twists and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excise, but were over-ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally

the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Re 1-8-0 per 100 lbs.; in the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 400 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent.; manufactured jute was charged at the rate of Rs. 10 per ton on sacking and Rs 16 per ton on Hessians.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs 2-4-0 per bale of 400 lbs in the case of raw jute and Rs. 10 per ton on sackings, and Rs 16 per ton on Hessians, these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent. to 7½ per cent. without any alteration in the Excise, which remained at 3½ per cent. This change was expected to produce an additional revenue of £1,000,000. The question of the Excise was left untouched, for the reason, amongst others, that the Government could not possibly forego the revenue of £320,000, which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs. 32,37,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent.; a special duty was levied on matches of 12 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent. the duties on Imported Liquors was raised to 3 annas per degree of proof per gallon; the *ad valorem* duty of 7½ per cent. was raised to 20 per cent. in the case of certain articles of luxury; the import duty on foreign sugar was increased from 10 to 15 per cent. and the duty on manufactured tobacco was raised by 50 per cent. The Customs duties were further increased in the Budget of 1922-23. The Government proposals in this direction have been described in an early passage. They were to raise the general Customs duty from 11 to 15 per cent., the cotton excise duty from 3½ per cent. to 7½ per cent., the duty on sugar from 15 to 25 per cent., a duty of 5 per cent. on imported yarn, a rising duty on machinery, iron, steel and railway material from 2½ per cent. to 10 per cent. together with the general duty on articles of luxury from 20 per cent. to 30 per cent. In the course of the passage of the Budget through the Legislatures the cotton excise duty was

retained at $3\frac{1}{2}$ per cent., the duty on machinery was retained at $2\frac{1}{2}$ per cent. and the duty on cotton piece-goods at 11 per cent., the other increases being accepted. In 1925 the Cotton Excise duties were finally abolished. Full details with regard to the customs duty are set out in the section on Indian Customs Tariff (*q.v.*). The Customs duties have been repeatedly raised in recent Budgets both as a protective measure and for revenue purposes. The latest duties will be found in detail in the Financial Section of the Year Book. The estimated revenue from the Customs in 1934-35 is Rs. 44,62 lakhs.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in

1908. Since that date, of the five Collectorship at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I. C. S. (*i.e.*, "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five ples in the rupee, or about 6d. in the pound; on incomes between 500 and

2,000 rupees at the rate of four ples in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Supplementary Finance Bill of 1931, when the scale was fixed as follows —

(RATES OF INCOME-TAX.)

A. In the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or company —

	RATE.
(1) When the total income is less than Rs. 2,000.	(<i>Vide Footnote.</i>)
(2) When the total income is Rs. 2,000 or upwards, but is less than Rs. 5,000.	Six ples in the rupee.
(3) When the total income is Rs. 5,000 or upwards, but is less than Rs. 10,000	Nine ples in the rupee
(4) When the total income is Rs. 10,000 or upwards, but is less than Rs. 15,000.	One anna in the rupee.
(5) When the total income is Rs. 15,000 or upwards, but is less than Rs. 20,000.	One anna and four ples in the rupee
(6) When the total income is Rs. 20,000 or upwards, but is less than Rs. 30,000	One anna and seven ples in the rupee.
(7) When the total income is Rs. 30,000 or upwards, but is less than Rs. 40,000.	One anna and eleven ples in the rupee
(8) When the total income is Rs. 40,000 or upwards, but is less than Rs. 100,000	Two annas and one ple in the rupee.
(9) When the total income is Rs. 100,000 or upwards.	Two annas and two ples in the rupee

B. In the case of every company and registered firm whatever its total income.

N.B.—Additional tax (Sur-charge) for the financial year—

1931-32 at $12\frac{1}{2}$ per cent.

and
1932-33 at 25 per cent.

over the rates prescribed by the Indian Finance Act, 1931, except in cases of income between Rs. 1,000 to Rs. 1,999

Tax at 2 ples on incomes between Rs. 1,000 to Rs. 1,999 for the year 1931-32 and

Tax at 4 ples for the year 1932-33 on the same income.

The surcharge was continued in the budget of 1933-34, as resolved by the assembly the rate of incomes between Rs. 1,000 and Rs. 1,500 was reduced from 4 ples to 2 ples. The surcharge continues in 1934-35.

By the 1935-36 budget the surcharge and the rate on incomes between Rs. 1,000 and Rs. 2,000 was reduced by one-third;

RATES OF SUPER-TAX.

In respect of the excess over thirty thousand of total income —

	RATE.
(1) In the case of every company—	NU.
(a) in respect of the first twenty thousand rupees of such excess.	
(b) for every rupee of the remainder of such excess :—	One anna in the rupees.
(2) (a) in the case of every Hindu undivided family :—	
(i) in respect of the first forty-five thousand rupees of such excess.	One anna and three pies in the rupee.
(ii) for every rupee of the next twenty-five thousand rupees of such excess.	Nil,
(b) in the case of every individual, unregistered firm and other association of individuals not being a registered firm or a company :—	
(i) for every rupee of the first twenty thousand rupees of such excess.	Nine pies in the rupees
(ii) for every rupee of the next fifty thousand rupees of such excess.	One anna and three pies in the rupee.
(c) in the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or a company.	
(i) for every rupee of the next fifty thousand rupees of such excess.	One anna and nine pies in the rupee.
(ii) for every rupee of the next fifty thousand rupees of such excess.	Two annas and three pies in the rupee.
(iii) for every rupee of the next fifty thousand rupees of such excess.	Two annas and nine pies in the rupee.
(iv) for every rupee of the next fifty thousand rupees of such excess.	Three annas and three pies in the rupee.
(v) for every rupee of the next fifty thousand rupees of such excess.	Three annas and nine pies in the rupee.
(vi) for every rupee of the next fifty thousand rupees of such excess.	Four annas and three pies in the rupee.
(vii) for every rupee of the next fifty thousand rupees of such excess.	Four annas and three pies in the rupee.
(viii) for every rupee of the next fifty thousand rupees of such excess.	Five annas and three pies in the rupee.
(ix) for every rupee of the next fifty thousand rupees of such excess.	Five annas and nine pies in the rupee.
(x) for every rupee of the remainder of such excess.	Six annas and three pies in the rupee.

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor-General in Council. The rest of the income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4) "subject to the control of the Governor-General in Council," but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1934-35 is Rs. 16.40 lakhs.

HISTORY OF THE COINAGE.

The Indian mints were closed to the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coining of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest, from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay**. It stated.—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs. 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pence per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

Silver.

The weight and fineness of the silver coins are :—

	FINE SILVER grains.	ALLOY grains.	TOTAL grains.
Rupee	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41½	3½	45
Eighth of a rupee or 2-anna piece	20½	1½	22½

One rupee = 165 grains of fine silver.

One shilling = 80½ grains of fine silver.

One rupee = shillings 2·0439.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows :—

	Grains troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pice being one-third of a pice or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows :—

	Standard weight in grains troy.	Diameter in millimetres.
Pice	75	25·4
Half-pice	37½	21·15
Pice	25	17·45

Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19·8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18 ; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so

much importance, and they continue to bulk so largely in all Indian economic questions, than we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately eleven pence halfpenny, and they were sold to the public at

one and four pence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented

in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a

liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up, meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough, there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London, it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III THE CHAMBERLAIN COMMITTEE

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the require-

ments of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *advice* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co, instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the amount of the Gold Standard Reserve, one-half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Com-

mittee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increased to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR.

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control, confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction.	Minimum Rate for Immediate Telegraphic Transfers.
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
13th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below:—

(1) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(iii) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(iv) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(v) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(vi) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(vii) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(viii) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(ix) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(x) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(xi) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11·30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(xii) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills; (b) abstention from purchase of silver; (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(xiii) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserve.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(xiv) The import and export of gold to and from India should be free from Government control.

(xv) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(xvi) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous, an important member of the Committee, Mr. Dadiba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following course:—

(a) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(h) "Reverse" drafts on London to be sold only at 1s 12s-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s 13-32d per rupee.

VI. THE TWO SHILLING RUPEE

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling; that it should be linked at the rate of two shillings instead of the standard value, one and fourpence; all other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coming at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue, the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchange, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange; the market rate jumped up to two shillings eight pence.

Effect of the Rise—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report; it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were food-stuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export of foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled a important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and the

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence halfpenny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always two pence or three pence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one, due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. These measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent of the Note Issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade, the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reserve Councils before abandoning

their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was its 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hulton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative, a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and the are textually reproduced in order that they may be above question—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note,

(xx) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(r) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(xi) The legal tender quality of the sovereign and the half-sovereign should be removed.

(xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(xiii) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(xiv) One rupee notes should be re-introduced and should be full legal tender.

(xv) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e. into notes of smaller denomination or silver rupees at the option of the currency authority.

(xvi) No change should be made in the legal tender character of the silver rupee.

(xvii) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(xviii) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the Reserve as soon as possible and to 25 per cent within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(ix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(x) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(xi) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(xii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(xiii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(xiv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(xv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(xvi) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(xvii) During the transition period the currency authority (i.e. the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(xviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

(xix) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(xx) Measures should be taken to promote the development of banking in India.

(xxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent—Whilst all the members of the Commission signed the report, one of their number, Sir Purshotamdas Thakurdas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that their efforts were emasculated by successive Secretaries of State, who had in view some which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues, was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms—

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s. 6d. is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s. 6d., the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended."

A Survey.—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked—

"What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a 'limping standard'. The Royal Commission declares that 'in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange'. Later they show that 'the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency'. Under the Indian system, contraction is not, and never has been, automatic."

"However, the standard limped along until the third year of the war. The exchange value of the rupee was stable, prices adjusted themselves to the ratio, Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages. It did not inspire public confidence, it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it, and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment 'when allowance has been made for all misunderstandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections'."

"There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver, the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative, the price of Council drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Balington Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, "The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control."

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupee to that standard, and to provide for its statutory control, automatic working and stability, to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member, Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz. bars; as soon as sufficient gold was available to put a gold coin in circulation, at a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 687 million fine ounces, in ten years, the acquisition in all of £103 millions of gold; and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 112 crore.

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, boards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking away from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity for safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard. Its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desirous to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded, it involves the demonetisation of the sovereign to which a sentimental influence attaches. But whilst it does not do these things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India, indeed the Commission do not attempt to burke it. "The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless, . . . it has been undertaken by every other country that has adopted an effective gold standard and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify." It is important, therefore, to examine the reserves and the procedure thereat.

The reserves held for the purpose of maintaining the value of the token currency are twofold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows —

Paper Currency Reserve

	Rs. Crores.
Silver coin	77 0
Silver bullion	7 7
Gold coin and bullion .. .	22 3
Rupee securities	57 1
Sterling securities	21 0
	<hr/> 185.1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

The Gold Standard Reserve amounts at present to £40,000,000 invested in Gold and in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute; that gold and gold securities should form not less than 40 per cent of the whole, with 50 to 60 per cent, as the ideal; and that the holding of gold, which now stands at about 12.8 per cent, should be raised to 20 per cent, as soon as possible, and to 25 per cent in ten years. Generally, they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission, Sir Purshotamdas Thakordas being the only dissident, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence, the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

One principle advanced in Sir Dadiba Dalal's prophetic minority report in 1919, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell; the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests, it recovered. In 1923, it was one shilling and fourpence sterling, in October, 1924, one and sixpence sterling, and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been re-established without undue disturbance. Sir Purnotandas Thakordas asserts in his minute of dissent that "the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India; as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the "conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." Sir Purnotandas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

The truth, I suggest, lies between these two opinions. There have been very substantial adjustments to one shilling and sixpence, no doubt, could be operative for over a year without doing this result. But it is clear that the adjustments, especially in regard to wages in

Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent. of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house; the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months, but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion, there would be convulsive disturbance of the foreign trade, there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past, it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six, the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency; the actual currency of India is a token, the silver rupee and another token, the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899-1900. It compelled heavy purchases of silver which invariably rose in prices as the Government came into the market, and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48d an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. "No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value." Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself, it was always convertible on demand; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small de-

nomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, "and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them." There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option, but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfit. India is suffering from a surplus of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-modelled in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League,

with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect:—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pices per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the last few years made it increasingly difficult for the Government of India to maintain the statutory ratio, but their difficulties were solved when Great Britain went off the gold standard in September 1931, and the rupee was linked to sterling. By the end of the year exports of commercial gold from India had begun to show their effects, and on December 30 the 1/6 rate had risen to 1/6 $\frac{1}{2}$, compared with 1/5 on September 18.

The characters of the Reserves which are the backbone of the Indian currency system are shown below

THE RESERVE BANK.

The following Act of the Indian Legislature received the assent of the Governor-General on March 6, 1934, and is known as the Reserve Bank of India Act, 1934.—

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage,

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system,

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures,

It is hereby enacted as follows.—

(1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of this Act.

(2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

Share Capital—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register, and no person who is not—

(a) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or

(b) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, or

(c) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the

government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor-General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (b) and (c) of sub-section (3) to be the parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely —

(a) to the Bombay register—one hundred and forty lakhs of rupees,

(b) to the Calcutta register—one hundred and forty-five lakhs of rupees,

(c) to the Delhi register—one hundred and fifteen lakhs of rupees

(d) to the Madras register—seventy lakhs of rupees,

(e) to the Rangoon register—thirty lakhs of rupees.

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register.

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares.

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares, and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

(7) If the number of such applicants is less than one-fifth of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one-half of such remaining shares, to those applicants who have applied for less than five shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9)

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

Increase and reduction of share capital

—(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor General in Council and with the approval of the Central Legislature, to such extent and in such manner as may be determined by the Bank in General meeting

(2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares constituting the original share capital.

(3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor General in Council.

(4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares.

The Bank shall, as soon as may be, establish offices in Bombay, Calcutta, Delhi, Madras and Rangoon and a branch in London, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor General in Council, elsewhere.

The general superintendence and direction of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

(1) The Central Board shall consist of the following Directors, namely —

(a) a Governor and two Deputy Governors, to be appointed by the Governor General in Council after consideration of the recommendations made by the Board in that behalf

(b) four Directors to be nominated by the Governor General in Council

(c) eight Directors to be elected on behalf of the shareholders on the various registers in the manner provided in section 9 and in the following numbers, namely —

(i) for the Bombay register two Directors

(ii) for the Calcutta register two Directors

(iii) for the Delhi register two Directors

(iv) for the Madras register one Director

(v) for the Rangoon register one Director, and

(d) one government official to be nominated by the Governor General in Council

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, with the approval of the Governor General in Council

(3) A Deputy Governor and the Director nominated under clause (d) of sub-section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote

Provided that when the Governor is absent a Deputy Governor authorized by him in this behalf in writing may vote for him

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor General in Council may fix when appointing them, and shall be eligible for re-appointment

A Director nominated under clause (b) or elected under clause (c) of sub-section (1) shall hold office for five years or thereafter until his successor, shall have been duly nominated or elected, and subject to the provisions of section 10, shall be eligible for re-nomination or re-election

A Director nominated under clause (d) of sub-section (1) shall hold office during the pleasure of the Governor General in Council

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of, the Board.

Local Boards (1) Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of —

(a) five members elected from amongst themselves by the shareholders who are registered on the register for that area and are qualified to vote, and

(b) not more than three members nominated by the Central Board from amongst the shareholders registered on the register for that area, who may be nominated at any time,

Provided that the Central Board shall in exercising this power of nomination aim at securing the representation of territorial or economic interests not already represented, and in particular the representation of agricultural interests and the interests of co-operative banks

(2) At an election of members of a Local Board for any area, any shareholder who has been registered on the register for that area, for a period of not less than six months ending with the date of the election, as holding five shares shall have one vote, and each shareholder so registered as having more than five shares shall have one vote for each five shares, but subject to a maximum of ten votes, and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an employee of the Bank.

(3) The members of a Local Board shall hold office until they vacate it under sub-section (6) and, subject to the provisions of section 10, shall be eligible for re-election or re-nomination, as the case may be

(4) At any time within three months of the day on which the Directors representing the shareholders on any register are due to retire under the provisions of this Act, the Central Board shall direct an election to be held of members of the Local Board concerned, and shall specify a date from which the registration of transfer from and to the register shall be suspended until the election has taken place

(5) On the issue of such direction the Local Board shall give notice of the date of the election and shall publish a list of shareholders holding five or more shares, with the dates on which their shares were registered, and with their registered addresses, and such list shall be available for purchase not less than three weeks before the date fixed for the election

(6) The names of the persons elected shall be notified to the Central Board which shall thereupon proceed to make any nominations permitted by clause (b) of sub-section (1) it may then decide to make, and shall fix the date on which the outgoing members of the Local Board shall vacate office, and the incoming members shall be deemed to have assumed office on that date

(7) The elected members of a Local Board shall, as soon as may be after they have been elected, elect from amongst themselves one or two persons, as the case may be, to be Directors representing to the shareholders on the register for the area for which the Board is constituted

(8) A Local Board shall advise the Central Board on such matters as may be generally or specifically referred to it and shall perform such duties as the Board may, by regulations, delegate to it.

(1) No person may be a Director or a member of a Local Board who —

(a) is a salaried government official or a salaried official of a State in India, or

(b) is, at any time has been, adjudicated an insolvent, or has suspended payment or has compounded with his creditors, or

(c) is found lunatic or becomes of unsound mind, or

(d) is an officer or employee of any bank, or

(e) is a director of any bank, other than a bank which is a society registered or deemed to be registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies.

(2) No two persons who are partners of the same mercantile firm, or are directors of the same private company, or one of whom is the general agent of or holds a power of procuration from the other, or from a mercantile firm of which the other is a partner, may be Directors or members of the same Local Board at the same time.

(3) Nothing in clause (a), clause (d) or clause (e) of sub-section (1) shall apply to the Governor, or to a Deputy Governor or to the Director nominated under clause (d) of sub-section (1) of section 8.

(1) The Governor General in Council may remove from office the Governor, or a Deputy Governor or any nominated or elected Director

Provided that in the case of a Director nominated or elected under clause (b) or clause (c) of sub-section (1) of section 8 this power shall be exercised only on a resolution passed by the Central Board in that behalf by a majority consisting of not less than nine Directors.

(2) A Director nominated or elected under clause (b) or clause (c) of sub-section (1) of section 8, and any member of a Local Board shall cease to hold office if, at any time after six months from the date of his nomination or election, he is not registered as a holder of unencumbered shares of the Bank of a nominal value of not less than five thousand rupees, or if he ceases to hold unencumbered shares of that value, and any such Director shall cease to hold office if without leave from the Governor General in Council he absents himself from three consecutive meetings of the Central Board convened under sub-section (1) of section 13.

(3) The Governor General in Council shall remove from office any Director, and the Central Board shall remove from office any member of a Local Board, if such Director or member becomes subject to any of the disqualifications specified in sub-section (1) or sub-section (2) of section 10

(4) A Director or member of a Local Board removed or ceasing to hold office under the foregoing sub-sections shall not be eligible for re-appointment either as Director or as member of a Local Board until the expiry of the term in which his appointment was made

(5) The appointment, nomination or election of a Director or member of a Local Board of any person who is a member of the Indian Legislature, or of a Local Legislature shall be void, unless, within two months of the date of his appointment, nomination or election, he ceases to be a member, and, if any Director or member of a Local Board is elected or nominated as a

member of any such Legislature, he shall cease to be a Director or member of the Local Board as from the date of such election or nomination, as the case may be.

(6) A Director may resign his office to the Governor General in Council, and a member of a Local Board may resign his office to the Central Board, and on the acceptance of the resignation the office shall become vacant.

(1) If the Governor or a Deputy Governor by infirmity or otherwise is rendered incapable of executing his duties or is absent on leave or otherwise in circumstances not involving the vacation of his appointment, the Governor General in Council may, after consideration of the recommendations made by the Central Board in this behalf, appoint another person to officiate for him, and such person may, notwithstanding anything contained in clause (d) of sub-section (1) of section 10, be an officer of the Bank.

(2) If an elected Director is for any reason unable to attend a particular meeting of the Central Board, the elected members of the Local Board of the area which he represents may elect one of their number to take his place, and for the purposes of that meeting the substitute so elected shall have all the powers of the absent Director

(3) Where any casual vacancy in the office of any member of a Local Board occurs otherwise than by the occurrence of a vacancy in the office of a Director elected by the Local Board, the Central Board may nominate thereto any qualified person recommended by the elected members of the Local Board.

(4) Where any casual vacancy occurs in the office of a Director other than the vacancies provided for in sub-section (1), the vacancy shall be filled, in the case of a nominated Director by nomination, and in the case of an elected Director by election held in the manner provided in section 9 for the election of Directors.

Provided that before such election is made the resulting vacancy, if any, in the Local Board and any vacancy in the office of an elected member of such Board which may have been filled by a member nominated under sub-section (3) shall be filled by election held as nearly as may be in the manner provided in section 9 for the election of members of a Local Board.

(5) A person nominated or elected under this section to fill a casual vacancy shall, subject to the proviso contained in sub-section (4), hold office for the unexpired portion of the term of his predecessor.

(1) Meetings of the Central Board shall be convened by the Governor at least six times in each year and at least once in each quarter.

(2) Any three Directors may require the Governor to convene a meeting of the Central Board at any time and the Governor shall forthwith convene a meeting accordingly.

(3) The Governor, or in his absence the Deputy Governor authorized by the Governor under the proviso to sub-section (3) of section 8 to vote for him, shall preside at meetings of the Central Board, and, in the event of an equality of votes, shall have a second or casting vote.

General Meetings.—(1) A general meeting (hereinafter in this Act referred to as the annual general meeting) shall be held annually at a place where there is an office of the Bank within six weeks from the date on which the annual accounts of the Bank are closed, and a general meeting may be convened by the Central Board at any other time:

Provided that the annual general meeting shall not be held on two consecutive occasions at any one place.

(2) The shareholders present at a general meeting shall be entitled to discuss the annual accounts, the report of the Central Board on the working of the Bank throughout the year and the auditors' report on the annual balance-sheet and accounts.

(3) Every shareholder shall be entitled to attend at any general meeting and each shareholder who has been registered on any register, for a period of not less than six months ending with the date of the meeting, as holding five or more shares shall have one vote and on a poll being demanded each shareholder so registered shall have one vote for each five shares, but subject to a maximum of ten votes and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an officer or employee of the Bank.

(1) The following provisions shall apply to the first constitution of the Central Board and, notwithstanding anything contained in section 8, the Central Board as constituted in accordance therewith shall be deemed to be duly constituted in accordance with this Act.

(2) The first Governor and the first Deputy Governor or Deputy Governors shall be appointed by the Governor General in Council on his own initiative, and shall receive such salaries and allowances as he may determine.

(3) The first eight Directors representing the shareholders on the various registers shall be nominated by the Governor General in Council from the areas served respectively by those registers, and the Directors so nominated shall hold office until their successors shall have been duly elected as provided in sub-section (4).

(4) On the expiry of each successive period of twelve months after the nomination of Directors under sub-section (3) two Directors shall be elected in the manner provided in section 9 until all the Directors so nominated have been replaced by elected Directors holding office in accordance with section 8. The register in respect of which the election is to be held shall be selected by lot from among the registers still represented by nominated Directors, and for the purposes of such lot the Madras and Rangoon registers shall be treated as if they comprised one register only.

As soon as may be after the commencement of this Act, the Central Board shall direct elections to be held and may make nominations, in order to constitute Local Boards in accordance

with the provisions of section 9, and the members of such Local Boards shall hold office up to the date fixed under sub-section (6) of section 9, but shall not exercise any right under sub-section (7) of that section.

Business.—The Bank shall be authorized to carry on and transact the several kinds of business hereinafter specified, namely:—

(1) the accepting of money on deposit without interest from, and the collection of money for, the Secretary of State in Council, the Governor General in Council, Local Governments, States in India, local authorities, banks and any other persons;

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn on and payable in India and arising out of *bona fide* commercial or trade transactions bearing two or more good signatures, one of which shall be that of a scheduled bank, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn on and payable in India and bearing two or more good signatures, one of which shall be that of a scheduled bank, or a provincial co-operative bank, and drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops, and maturing within nine months from the date of such purchase or rediscount, exclusive of days of grace;

(c) the purchase, sale and rediscount of bills of exchange and promissory notes drawn and payable in India and bearing the signature of a scheduled bank, and issued or drawn for the purpose of holding or trading in securities of the Government of India or a Local Government, or such securities of States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(3) (a) the purchase from and sale to scheduled banks of sterling in amounts of not less than the equivalent of one lakh of rupees;

(b) the purchase, sale and rediscount of bills of exchange (including treasury bills) drawn in or on any place in the United Kingdom and maturing within ninety days from the date of purchase, provided that no such purchase, sale or rediscount shall be made in India except with a scheduled bank, and

(c) the keeping of balances with banks in the United Kingdom;

(4) the making to States in India, local authorities, scheduled banks and provincial co-operative banks of loans and advances, repayable on demand or on the expiry of fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immovable property) in which a trustee is authorized to invest trust money by any Act of Parliament or by any law for the time being in force in British India;

(b) gold or silver or documents of title to the same ;

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank ;

(d) promissory notes of any scheduled bank or a provincial co-operative bank, supported by documents of title to goods which have been transferred, assigned, or pledged to any such bank as security for a cash credit or overdraft granted for *bona fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops ;

(5) the making to the Governor General in Council and to such Local Governments as may have the custody and management of their own provincial revenues of advances repayable in each case not later than three months from the date of the making of the advance ;

(6) the issue of demand drafts made payable at its own offices or agencies and the making, issue and circulation of bank post bills ;

(7) the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of such purchase,

(8) the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of such securities of a local authority in British India or of such States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board .

Provided that securities fully guaranteed as to principal and interest by the Government of India, a Local Government, a local authority or a State in India shall be deemed for the purposes of this clause to be securities of such government, authority or State ;

Provided further that the amount of such securities held at any time in the Banking Department shall be so regulated that—

(a) the total value of such securities shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and five-fifths of the liabilities of the Banking Department in respect of deposits ;

(b) the value of such securities maturing after one year shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits, and

(c) the value of such securities maturing after ten years shall not exceed the aggregate amount of the share capital of the Bank and the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits ;

(d) The custody of monies, securities and other articles of value, and the collection of the proceeds, whether principal, interest or dividends, of any such securities

(10) the sale and realisation of all property, whether movable or immovable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims ;

(11) the acting as agent for the Secretary of State in Council, the Governor General in Council for any Local Government or local authority of State in India in the transaction of any of the following kinds of business, namely —

(a) the purchase and sale of gold or silver ;

(b) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company ;

(c) the collection of the proceeds, whether principal, interest or dividends, of any securities or shares ;

(d) the remittance of such proceeds, at the risk of the principal, by bills of exchange payable either in India or elsewhere ;

(e) the management of public debt ;

(12) the purchase and sale of gold coin and bullion ;

(13) the opening of an account with or the making of an agency agreement with, and the acting as agent or correspondent of, a bank which is the principal currency authority of any country under the law for the time being in force in that country or any international bank formed by such banks, and the investing of the funds of the Bank in the shares of any such international bank ;

(14) the borrowing of money for a period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed ;

Provided that no money shall be borrowed under this clause from any person in India other than a schedule bank, or from any person outside India other than a bank which is the principal currency authority of any country under the law for the time being in force in that country

Provided further that the total amount of such borrowings from persons in India shall not at any time exceed the amount of the share capital of the Bank ;

(15) the making and issue of bank notes subject to the provision of this Act, and,

(16) generally, the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under this Act.

When, in the opinion of the Central Board or, where the powers and functions of the Central Board under this section have been delegated to a committee of the Central Board or to the Governor, in the opinion of such committee or of the Governor as the case may be, a special occasion has arisen making it necessary or expedient that action should be taken under this section for the purpose of regulating credit in the interests of Indian trade, commerce, industry and agriculture, the Bank may, notwithstanding any limitation contained in sub-clauses (a) and (b) of clause (2) or sub-clause (a) or (b) of clause (3) or clause (4) of section 17,—

(1) purchase, sell or discount any of the bills of exchange or promissory notes specified in sub-clause (a) or (b) of clause (2) or sub-clause (b) of clause (3) of that section though such bill or promissory note does not bear the signature of a scheduled bank or a provincial co-operative bank, or

(2) purchase or sell sterling in amounts of not less than the equivalent of one lakh of rupees, or

(3) make loans or advances repayable on demand or on the expiry of fixed periods not exceeding ninety days against the various forms of security specified in clause (4) of that section.

Provided that a committee of the Board or the Governor shall not, save in cases of special urgency, authorized action under this section without prior consultation with the Central Board and that in all cases action so authorized shall be reported to the members of the Central Board forthwith.

Forbidden Business—Save as otherwise provided in sections 17, 18 and 45, the Bank may not

(1) engage in trade or otherwise have a direct interest in any commercial, industrial or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims, provided that all such interests shall be disposed of at the earliest possible moment,

(2) purchase its own shares or the shares to any other bank or of any company, or grant loans upon the security of any such shares,

(3) advance money on mortgage of, or otherwise on the security of, immovable property or documents of title relating thereto, or become the owner of immovable property, except so far as is necessary for its own business premises and residences for its officers and servants,

(4) make loans or advances,

(5) draw or accept bills payable otherwise than on demand,

(6) allow interest on deposits or current accounts.

Central Banking Functions

The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues and such States in India as may be approved of and notified by the Governor General in Council in the Gazette of India, and to make payments up to the amount standing to the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the public debt

(1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall entrust the Bank, on such conditions as may be agreed upon, with all their money, remittance, exchange and banking

transactions in India and, in particular, shall deposit free of interest all their cash balances with the Bank

Provided that nothing in this sub-section shall prevent the Governor General in Council or any Local Government from carrying on money transactions at places where the Bank has no branches or agencies, and the Governor General in Council and Local Government may hold at such places such balances as they may require

(2) The Governor General in Council and each Local Government shall entrust the Bank on such conditions as may be agreed upon with the management of the public debt and with the issue of any new loans

(3) In the event of any failure to reach agreement on the conditions referred to in this section the Governor General in Council shall decide what the conditions shall be

(4) Any agreement made under this section to which the Governor General in Council or any Local Government is a party shall be laid, as soon as may be after it is made, before the Central Legislature and in the case of a Local Government before its local Legislature also

Bank Notes—(1) The Bank shall have the sole right to issue bank notes in British India, and may, for a period which shall be fixed by the Governor General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Government of India issued either by the Governor General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly.

(2) On and from the date on which this Chapter comes into force the Governor General in Council shall not issue any currency notes

Issue Department—(1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 34

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve

Bank notes shall be of the denominations of values of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, unless otherwise directed by the Governor General in Council on the recommendation of the Central Board

The design, form and material of bank notes shall be such as may be approved by the Governor General in Council after consideration of the recommendations made by the Central Board

(1) Subject to the provisions of sub-section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor General in Council.

(2) On recommendation of the Central Board the Governor General in Council may, by notification in the Gazette of India, declare that with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

The Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor General in Council or the Bank the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note.

Provided that the Bank may, with the previous sanction of the Governor General in Council prescribe the circumstances in and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace and the rules made under this proviso shall be laid on the table of both Houses of the Central Legislature.

The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it.

(1) If in the opinion of the Governor General in Council the Bank fails to carry out any of the obligations imposed on it by or under this Act, he may, by notification in the Gazette of India, declare the Central Board to be superseded, and thereafter the general superintendence and direction of the affairs of the Bank shall be entrusted to such agency as the Governor General in Council may determine, and such agency may exercise the powers and do all acts and things which may be exercised or done by the Central Board under this Act.

(2) When action is taken under this section the Governor General in Council shall cause a full report of the circumstances leading to such action and of the action taken to be laid before the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board.

No person in British India other than the Bank or, as expressly authorized by this Act, the Governor General in Council shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person.

Provided that cheques or drafts, including hundis, payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent.

(1) Any person contravening the provisions of section 31 shall be punishable with fine which may extend to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(2) No prosecution under this section shall be instituted except on complaint made by the Bank.

Assets of the Issue Department.

(1) The assets of the Issue Department shall consist of gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.

(2) Of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or sterling securities.

Provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value.

(3) The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub-clause (a) or sub-clause (b) of clause (2) of section 17 or under clause (1) of section 18.

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanction of the Governor General in Council, such amount plus a sum of ten crores of rupees.

(4) For the purposes of this section, gold coin and gold bullion shall be valued at 8 47512 grains of fine gold per rupee, rupee coin shall be valued at its face value, and securities shall be valued at the market rate for the time being obtaining.

(5) Of the gold coin and gold bullion held as assets, not less than seventeen-twentieths shall be held in British India, and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies.

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as part of the assets.

(6) For the purposes of this section, the sterling securities which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of the United Kingdom, namely —

(a) balances at the credit of the Issue Department with the Bank of England ;

(b) bills of exchange bearing two or more good signatures and drawn on and payable at any place in the United Kingdom and having a maturity not exceeding ninety days ;

(c) government securities of the United Kingdom maturing within five years ;

Provided that, for a period of two years from the date on which this Chapter comes into force, any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding anything contained in section 17.

Liabilities of the Issue Department.—(1) The liabilities of the Issue Department shall be an amount equal to the total of the amount of the currency notes of the Government of India and bank notes for the time being in circulation.

(2) For the purposes of this section any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything contained in sub-section (2) of section 23, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be, but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council.

On the date on which this Chapter comes into force the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirements of section 33.

Provided that the total amount of the gold coin, gold bullion and sterling securities so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees.

Provided further that the whole of the gold coin and gold bullion held by the Governor General in Council in the gold standard reserve and the paper currency reserve at the time of transfer shall be so transferred.

(1) After the close of any financial year in which the minimum amount of rupee coin held in the assets, as shown in any of the weekly accounts of the Issue Department for that year prescribed under sub-section (1) of section 53, is greater than fifty crores of rupees or one-sixth of the total amount of the assets as shown in that account, whichever may be the greater the Bank may deliver to the Governor General in Council rupee coin up to the amount of such excess but not without his consent exceeding five crores of rupees, against payment of legal tender value in the form of bank notes, gold or securities.

Provided that if the Bank so desires and if the amount of gold coin, gold bullion and sterling securities in the assets does not at that time

exceed one-half of the total assets, a proportion not exceeding two-fifths of such payment shall be in gold coin, gold bullion or such sterling securities as may be held as part of the assets under sub-section (6) of section 33.

(2) After the close of any financial year in which the maximum amount of rupee coin held in the assets, as so shown, is less than fifty crores of rupees or one-sixth of the total amount of the assets, as so shown, whichever may be the greater the Governor General in Council shall deliver to the Bank rupee coin up to the amount of such deficiency, but not without its consent exceeding five crores of rupees, against payment of legal tender value.

(1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or sterling securities of less aggregate amount than that required by sub-section (2) of section 33 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative.

Provided that the gold coin and gold bullion held as such assets shall not be reduced below the amount specified in the proviso to sub-section (2) of section 33 so long as any sterling securities remain held as such assets.

(2) In respect of any period during which the holding of gold coin, gold bullion and sterling securities is reduced under sub-section (1), the Bank shall pay to the Governor General in Council a tax upon the amount by which such holding is reduced below the minimum "prescribed by sub-section (2) of section 33; and such tax shall be payable at the bank rate for the time being in force, with an addition of one per cent per annum when such holding exceeds thirty-two and a half per cent of the total amount of the assets and of a further one and a half per cent per annum in respect of every further decrease, of two and a half per cent or part of such decrease.

Provided that the tax shall not in any event be payable at a rate less than six per cent, per annum.

The Governor General in Council shall undertake not to re-issue any rupee coin delivered under section 36 nor to put into circulation any rupees, except through the Bank and as provided in that section, and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor General in Council under that section.

(1) The Bank shall issue rupee coin on demand in exchange for bank notes and currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906.

(2) The Bank shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or other coins which are legal tender under

the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation; and the Governor General in Council shall supply such coins to the Bank on demand. If the Governor General in Council at any time fails to supply such coins, the Bank shall be released from its obligations to supply them to the public.

Obligation to sell sterling.—The Bank shall sell, to any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty-nine sixty-fourths of a penny for a rupee.

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds.

Obligation to buy sterling.—The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three-sixteenths of a penny for a rupee:

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds.

Provided further that no person shall be entitled to receive payment unless the Bank is satisfied that payment of the sterling in London has been made.

Cash reserves of scheduled banks.—(1) Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent of the demand liabilities and two per cent of the time liabilities of such bank in India as shown in the return referred to in sub-section (2).

Explanation.—For the purposes of this section liabilities shall not include the paid-up capital or the reserves, or any credit balance in the profits and loss account of the bank or the amount of any loan taken from the Reserve Bank.

(2) Every scheduled bank shall send to the Governor General in Council and to the Bank a return signed by two responsible officers of such bank showing—

(a) the amounts of its demand and time liabilities, respectively, in India,

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin, respectively,

(d) the amounts of advances made and of bills discounted in India, respectively and

(e) the balance held at the Bank, at the close of business on each Friday or if Friday is a public holiday under the Negotiable Instruments Act, 1881, at the close of business on the preceding working day; and such return shall be sent not later than two working days after the date to which it relates:

Provided that where the Bank is satisfied that the furnishing of a weekly return under this sub-section is impracticable in the case of any scheduled bank by reason of the geographical position of the bank and its branches, the Bank may require such bank to furnish in lieu of a weekly return a monthly return to be dispatched not later than fourteen days after the end of the month to which it relates giving the details specified in this sub-section in respect of such bank at the close of business for the month.

(3) If at the close of business on any day before the day fixed for the next return, the balance held at the Bank by any scheduled bank is below the minimum prescribed in sub-section (1), such scheduled bank shall be liable to pay to the Bank in respect of each such day penal interest at a rate three per cent above the bank rate on the amount by which the balance with the Bank falls short of the prescribed minimum, and if on the day fixed for the next return such balance is still below the prescribed minimum as disclosed by this return, the rates of penal interest shall be increased to a rate five per cent above the bank rate in respect of that day and each subsequent day on which the balance held at the Bank at the close of business on that day is below the prescribed minimum.

(4) Any scheduled bank failing to comply with the provisions of sub-section (2) shall be liable to pay to the Governor General in Council or to the Bank, as the case may be, or to each, a penalty of one hundred rupees for each day during which the failure continues.

(5) The penalties imposed by sub-sections (3) and (4) shall be payable on demand made by the Bank, and, in the event of a refusal by the defaulting bank to pay on such demand, may be levied by a direction of the principal Civil Court having jurisdiction in the area where an office of the defaulting bank is situated, such direction to be made only upon application made in this behalf to the Court by the Governor General in Council in the case of a failure to make a return under sub-section (2) to the Governor General in Council, or by the Bank with the previous sanction of the Governor General in Council in other cases.

(6) The Governor General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any bank not already so included which carries on the business of banking in British India and which—

(a) has a paid-up capital and reserves of an aggregate value of not less than five lakhs of rupees, and

(b) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or a company incorporated by or under any law in force in any place outside British India,

and shall by a like notification direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid-up

capital and reserve becomes at any time less than five lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

The Bank shall compile and shall cause to be published each week a consolidated statement showing the aggregate of the amounts under each clause of sub-section (2) of section 42 exhibited in the returns received from scheduled banks under that section.

The Bank may require any provincial co-operative bank with which it has any transactions under section 17 to furnish the return referred to in sub-section (2) of section 42, and if it does so, the provisions of sub-sections (4) and (5) of section 42 shall apply so far as may be to such co-operative bank as if it were a scheduled bank.

Agreement with the Imperial Bank—

(1) The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side, and shall further contain the provisions set forth in the Third Schedule

Provided that the agreement shall be conditional on the maintenance of a sound financial position by the Imperial Bank and that if, in the opinion of the Central Board, the Imperial Bank has failed either to fulfill the conditions of the Agreement or to maintain a sound financial position, the Central Board shall make a recommendation to the Governor General in Council, and the Governor General in Council, after making such further enquiry as he thinks fit, may issue instructions to the Imperial Bank with reference either to the agreement or to any matter which in his opinion involves the security of the Government monies or the assets of the Issue Department in the custody of the Imperial Bank, and in the event of the Imperial Bank disregarding such instructions may declare the agreement to be terminated.

(2) The agreement referred to in sub-section (1) shall, as soon as may be after it is made, be laid before the Central Legislature.

General Provisions.

The Governor General in Council shall transfer to the Bank rupee securities of the value of five crores of rupees to be allocated by the Bank to the Reserve Fund.

After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated

to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor General in Council.

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(1) Notwithstanding anything contained in the Indian Income-tax Act, 1922, or any other enactment for the time being in force relating to income-tax or super-tax, the Bank shall not be liable to pay income-tax or super-tax on any of its income, profits or gains.

Provided that nothing in this section shall affect the liability of any shareholder in respect of income-tax or super-tax.

(2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend paid under section 47 of this Act shall be deemed to be "Interest on Securities."

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under this Act.

(1) Not less than two auditors shall be elected and their remuneration fixed at the annual general meeting. The auditors may be shareholders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re-election on quitting office.

(2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections.

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board.

Without prejudice to anything contained in section 50, the Governor General in Council may at any time appoint the Auditor General or such auditors as he thinks fit to examine and report upon the accounts of the Bank.

Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto, and every auditor shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ account

ants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the shareholders or to the Governor General in Council, as the case may be, upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the shareholders shall be read together with the report of the Central Board, at the annual general meeting.

Returns—(1) The Bank shall prepare and transmit to the Governor General in Council a weekly account of the Issue Department and of the Banking Department in the form set out in the Fifth Schedule or in such other form as the Governor General in Council may, by notification in the Gazette of India, prescribe. The Governor General in Council shall cause these accounts to be published weekly in the Gazette of India.

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a copy of the annual accounts signed by the Governor, the Deputy Governors and the Chief Accounting Officer of the Bank, and certified by the auditors, together with a report by the Central Board on the working of the Bank throughout the year, and the Governor General in Council shall cause such accounts and report to be published in the Gazette of India.

(3) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank.

Agricultural Credit Department—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Governor General in Council, Local Governments, provincial co-operative banks, and other banking organisations.

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks and any other banks or organisations engaged in the business of agricultural credit.

(1) the Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into

force, make to the Governor General in Council a report, with proposals, if it thinks fit, for legislation, on the following matters, namely—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking, and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank.

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Governor General in Council.

(1) The Local Board of any area may at any time require any shareholder who is registered on the register for that area to furnish to the Local Board within a specified time, not being less than thirty days, a declaration, in such form as the Central Board may by regulations prescribe, giving particulars of all shares on the said register of which he is the owner.

(2) If it appears from such declaration that any shareholder is not the owner of any shares which are registered in his name, the Local Board may amend the register accordingly.

(3) If any person required to make a declaration under sub-section (1) fails to make such declaration within the specified time, the Local Board may make an entry against his name in the register recording such failure and directing that he shall have no right to vote, either under section 9 or section 14, by reason of the shares registered in his name on that register.

(4) Whoever makes a false statement in any declaration furnished by him under sub-section (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 193 of that Code.

(5) Nothing contained in any declaration furnished under sub-section (1) shall operate to affect the Bank with notice of any trust, and no notice of any trust expressed, implied or constructive shall be entered on the register or be receivable by the Bank.

(6) Until Local Boards have been constituted under section 9 the powers of a Local Board under this section shall be exercised by the Central Board in respect of any area for which a Local Board has not been constituted.

(1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of seventy-five per cent and twenty-five per cent respectively;

Provided that the total amount payable to any shareholder under this section shall not exceed the paid-up value of the shares held by him by more than one per cent for each year after the commencement of this Act subject to a maximum of twenty-five per cent.

(1) The Central Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :—

(a) the holding and conduct of elections under this Act, including provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote,

(b) the final decision of doubts or disputes regarding the qualifications of candidates for election or regarding the validity of elections,

(c) the maintenance of the share register, the manner in which and the conditions subject to which shares may be held and transferred, and, generally, all matters relating to the rights and duties of shareholders;

(d) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised;

(e) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons,

(f) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof;

(g) the conduct of business of Local Boards and the delegation to such Boards of powers and functions,

(h) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank,

(i) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees,

(j) the constitution and management of staff and superannuation funds for the officers and servants of the Bank,

(k) the manner and form in which contracts binding on the Bank may be executed;

(l) the provision of an official seal of the Bank and the manner and effect of its use,

(m) the manner and form in which the balance-sheet of the Bank shall be drawn up and in which the accounts shall be maintained,

(n) the remuneration of Directors of the Bank;

(o) the relations of the scheduled banks with the Bank and the returns to be submitted by the scheduled banks to the Bank,

(p) the regulation of clearing-houses for the scheduled banks,

(q) the circumstances in which, and the conditions and limitations subject to which the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded, and

(r) generally, for the efficient conduct of the business of the Bank

(3) Copies of all regulations made under this section shall be available to the public on payment.

In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely :—

“11. Gold coins, coined at His Majesty's Royal Mint in England or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment or on account, but such coins shall be received by the Reserve Bank of India at its offices, branches and agencies in India at the bullion value of such coins calculated at the rate of 8 47512 grams troy of fine gold per rupee.”

The Indian Paper Currency Act, 1923, the Indian Paper (Currency Amendment) Act, 1923, the Indian Paper (Currency Amendment) Act, 1925, and the Currency Act, 1927, are hereby repealed.

In sub-section (3) of section 11 of the Indian Companies Act, 1913, after the word “Royal” the words “Reserve Bank” shall be inserted.

The Reserve Bank begins work with the opening of the financial year 1935-36.

Trade.

India is pre-eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in those staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such year as 1896-97 and 1899-1900. Well over thirty per cent of the culturable area of the Punjab is under irrigation, and huge new works are in progress to utilise the waters of the Sutlej, and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their flood waters for Madras. All over India irrigation works, large and small, are being restlessly pressed forward, and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan, and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oilseeds and another produce, and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat, foreign countries are very important facts in the Indian export trade; therefore India had a vital interest in the economic recovery of Europe. When the post-war boom collapsed it hit India hard and

for a year or two the export trade reeled under the shock. The progress of the Dawes Plan and the measures taken under the League of Nations to assist Austria and Hungary back to industrial health had a special bearing on the prosperity of India; they have been elements of importance in inducing her recovery of prosperity.

But whilst India is pre-eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry, which has its home in the town and Island of Bombay, with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal, and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa; the mills find their principal outlet in India itself, and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry, though large quantities of Indian pig iron are shipped to the Far East, and in some years to the western ports of North and South America. Therefore, whilst India is still in the main an agricultural country, three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance, and their prosperity every year affects in an increasing degree the general prosperity of the people.

I.—GENERAL.

Agricultural Conditions in India—The monsoon of 1933 started a little earlier than usual and gave, on the whole, well-distributed rains over the country. There were no prolonged breaks and the rainfall was generally in excess of the normal. Averaged over the plains of India, the total rainfall during the monsoon period was 14 per cent. above the normal. During the retreating period of the monsoon the rainfall was defective in the Punjab, the North-West Frontier Province, Sind and North-East India, elsewhere it was normal or above it. Taking the year as a whole, the rainfall was above the average in most parts of the country.

From the point of view of agriculture, the season may be regarded as fairly good, although in some places crops were damaged by excessive rains and, in the cold weather by low tempera-

ture and frost. The outturn of rice fell short of the last year's good crop, but was still satisfactory, particularly in Burma where the yield was 5 per cent. in excess of last year. A very good yield was obtained for the sugarcane crop, exceeding the previous year's record outturn by 8 per cent. The outturn of jute and cotton increased by 13 and 7 per cent respectively, as compared with the preceding season. Groundnut gave an increased production in 1933-34, while sesamum and castor seed yielded slightly less than in the preceding season. The wheat crop of 1932-33—which largely affects the year under review—was better than the preceding season's production by 5 per cent. The production of the rape and mustard, and linseed (winter oilseeds) crops of 1932-33 was about the same as in the preceding season, the former showing an increase of 2 per cent, and the latter a decrease of an equal magnitude.

Industrial Situation in India.—Although, in general, like its predecessor, the year 1933 was free from industrial disputes of any serious character, it was not altogether immune from minor disturbances of a sporadic nature. On the whole, the number of working people involved and the total loss in working days that occurred were a little larger than in 1932

Volume of Trade.—The following figures have been compiled to show the values of imports and exports of merchandise on the basis of the declared values in 1913-14. These statistics are necessarily approximate, but they are sufficiently accurate to afford a fairly reliable measure of the course of trade —

(In crores of Rupees)

	1913-14	1925-26	1926-27	1927-28	1928-29	1929-30	1930-31	1931-32	1932-33	1933-34
Imports ..	183	143	156	181	190	189	157	143	162	146
Exports ..	144	246	228	248	260	263	235	200	176	209
Total trade in merchandise excluding re-exports	437	389	384	429	450	452	392	343	338	355

The table shows a moderate progress in recovery from the record low level of 1932-33, indicating as it does an improvement of Rs 17 crores on the basis of 1913-14 prices, in the total trade in merchandise (excluding re-exports). It is significant that the recovery was confined to the export side, the imports having as a matter of fact shown a decline of Rs 16 crores

Prices in India.—In September, 1929, the index number of wholesale prices at Calcutta was 143. By September, 1931, the index had fallen to 91. The suspension of the gold standard by Britain in September, 1931, and the retention of the link between the rupee and sterling, resulted in an immediate appreciation of the Indian price-level, this improvement was maintained till December, 1931, but thereafter a fall began and by June, 1932, the index number was 86, the lowest figure reached during 1932. The figure remained stationary at 91 from August to October, 1932, but receded to 82 in March, 1933. From March it again showed an upward tendency and reached the maximum for 1933, viz., (91) in July from the next month it declined again and closed at 89 in December. During the first quarter of 1934, the index remained more or less steady. It touched 90 at the end of January, but dropped back to 88 at the end of March.

As compared with September, 1929, the heaviest decline in March, 1934, was in oil-seeds and raw jute. Among other agricultural products the next heaviest decline was in rice and raw cotton. Wheat prices were on a higher level during the first seven months of 1933 than during 1932 but they showed a declining tendency from August till March, 1934. The price of sugar was on a lower level during 1933 than in 1932 and the decline towards the end of 1933 was fairly marked. In 1933, tea prices showed a great improvement as compared with 1932 and the rise was most noticeable from June 1933, when the price basis for teas sold for export was much higher than those for internal consumption. In December 1932, the index number was 57, and this rose to 149 at the end

of January, 1934. Among raw materials, the prices of hides and skins rose in 1933 as compared with 1932. Prices of cotton manufactures did not show marked fluctuation during the year but they improved slightly towards the close. The prices of jute manufactures as compared with 1932, fell during the first quarter of 1933 then they rose till July. Thereafter they displayed a downward tendency till October when they rose again and the index number stood at 79 in March, 1934, and 83 in February, 1934. Metal prices were on a lower level than that in the previous year.

Imports.—The total value of the imports of merchandise into British India during 1933-34 amounted to Rs 115 crores and that of exports to Rs 150 crores. Compared with the preceding year, there was an improvement of Rs 17 crores or 13 percent in the case of imports, while there was an increase of Rs 14 crores or 10 percent under exports.

On the import side the demand for foreign textiles weakened. The decrease recorded under this head amounted to one of Rs 16 crores on a total of Rs 47 crores recorded in 1932-33. Stated in percentages, this meant a decline of 34 per cent. over the figures of 1932-33; and of 12 per cent. over those of 1931-32. The decline under the textile group was primarily the result of smaller imports of cotton piece-goods, the total receipt of which only amounted to 796 million yards, valued at Rs 13.49 lakhs, as compared with 1,225 million yards valued at Rs 21.26 lakhs in 1932-33. All the principal varieties of cotton piece-goods participated in this decline, grey goods falling by 126 million yards, white by 151 million yards and coloured by 156 million yards. Imports both from the United Kingdom and from Japan recorded decreases under all the descriptions. Arrivals of cotton twist and yarn also fell off from 45.1 million lbs valued at Rs 3.79 lakhs to 32.1 million lbs valued at Rs 2.58 lakhs. There were concurrent declines under some of the other important items included in the textile group— notably a fall of Rs. 75 lakhs under silk, raw and

manufactured, of Rs 42 lakhs under wool and woollens and of Rs 1.42 lakhs under artificial silk (including yarn and goods of artificial silk mixed with other materials). The imports of raw cotton also receded from 84,800 tons to 12,900 tons. Under the metals groups there was a decline of Rs 24 lakhs. Imports of iron and steel indeed rose from 326,000 tons to 329,000 tons in quantity and from Rs 5.30 lakhs to Rs 5.63 lakhs in value, but metals other than iron and steel and manufactures thereof declined from 70,000 tons to 63,000 tons in quantity and from Rs 4.13 lakhs to Rs 3.97 lakhs in value. Under machinery and millwork there was an advance of Rs 2.22 lakhs due chiefly to larger arrivals of sugar machinery. The value of hardware imported contracted from Rs 2.99 lakhs to Rs 2.88 lakhs. There was an improvement in the imports of motor vehicles from Rs 2.43 lakhs to Rs 3.19 lakhs, the number of motor cars imported rising from 6,201 to 9,759 and that of omnibuses from 2,676 to 5,496. The value of the imports of rubber manufactures, however, declined from Rs 1.98 lakhs to Rs 1.88 lakhs. Imports of foreign sugar continued to decline and only amounted to 264,000 tons valued at Rs 2.71 lakhs as against 402,000 tons valued at Rs 4.23 lakhs in the preceding year. Arrivals of mineral oils declined slightly in quantity from 188 million gallons to 186 million gallons and in value from Rs 6.70 lakhs to Rs 5.83 lakhs. Imports of kerosene oil contracted from 9.5 million gallons to 58.1 million gallons while those of fuel oils advanced from 104.1 million gallons to 105 million gallons. The value of provisions imported declined from Rs 2.93 lakhs to Rs 2.72 lakhs, the bulk of the decline having been due to a falling off in the consignments of vegetable products. Imports of paper and pasteboard recorded a decline of 76,000 cwt in quantity and of Rs 23 lakhs in value. Consignments of wheat declined from 33,500 tons worth Rs 294 lakhs to 18,300 tons worth Rs 123 lakhs while those of rice, not in the husk, rose from 35,500 tons (Rs 31 lakhs) to 84,000 tons (Rs 49 lakhs).

Exports—On the export side, despatches of raw cotton rose from 2,063,000 bales valued at Rs 20½ crores to 2,710,000 bales valued at Rs 27 crores. Cotton manufactures (including twist and yarn) recorded a decline of Rs 56 lakhs and amounted to Rs 2,731 lakhs. Despatches of Indian cotton piecegoods declined further from 66.1 million yards worth Rs 2.09 lakhs to 56.5 million yards worth Rs 1.66 lakhs. Shipments of twist and yarn, however, advanced slightly in quantity from 15.1 million lbs to 16.4 million lbs and in value from Rs 79 lakhs to Rs 82 lakhs. The exports of raw and manufactured jute recorded an improvement in value of Rs 1 crore. Shipments of raw jute increased from 3,153,000 bales valued at Rs 9.73 lakhs to 4,190,000 bales valued at Rs 10.93 lakhs. Exports of gunny bags contracted from 415 millions (Rs 11.16 lakhs) to 402 millions (Rs 9.72 lakhs), while those of gunny cloth rose from 1,012 million yards (Rs 9.24 lakhs) to 1,053 million yards (Rs 11.38 lakhs). Exports of foodgrains declined in quantity from 2,056,000 tons to 1,870,000 tons and in value from Rs 16.08 lakhs to Rs 11.75 lakhs. Exports of wheat remained practically unchanged at 2,000 tons, while those of rice dropped from 1,887,000 tons to 1,744,000 tons in quantity and

from Rs 14.46 lakhs to Rs 10.57 lakhs in value. Despatches of tea declined from 379 million lbs to 318 million lbs in quantity but owing to much higher prices the value rose from Rs 17.15 lakhs to Rs 19.85 lakhs. Exports of oilseeds amounted to 1,124,000 tons valued at Rs 13.66 lakhs which meant an increase of 53 per cent in quantity and of 21 per cent in value in comparison with the figures of the preceding year. The improvement was due mainly to increases in the shipments of linseed from 72,000 tons to 379,000 tons, of groundnuts from 433,000 tons to 547,000 tons, of cotton seed from 2,000 tons to 6,000 tons and of sesamum from 10,000 tons to 15,000 tons. Rapeseed showed a decline of 41,000 tons. Exports of hides and skins recorded a large improvement from 41,800 tons worth Rs 7.43 lakhs to 61,400 tons worth Rs 9.90 lakhs. Shipments of metals and ores advanced considerably from 695,000 tons valued at Rs 4.68 lakhs to 976,000 tons valued at Rs 5.49 lakhs. Shipments of lac amounted to 731,000 cwt valued at Rs 2.46 lakhs which represented an increase of 75 per cent in quantity and of 98 per cent in value in comparison with the corresponding figures for 1932-33. Despatches of coffee advanced by 13,000 cwt in quantity but the value dropped by Rs 8 lakhs.

Balance of Trade—The visible balance of trade in merchandise and treasure for the year 1933-34 was in favour of India to the extent of Rs 92 crores as compared with Rs 68 crores in 1932-33. The transactions in treasure on private account resulted in a net export of treasure, amounting to Rs 57½ crores as against Rs 65 crores in the preceding year. Net exports of gold amounted to Rs 57 crores, while silver showed a net import of Rs 1 lakh. Net exports of currency notes amounted to Rs 19 lakhs.

Tariff Changes—The changes in the tariff made under the various Acts passed during the latter part of 1932 and the earlier part of 1933 were dealt with in the review for the year 1932-33. Since then eleven Acts have been passed introducing several changes in the tariff.

The Indian Tariff (Second Amendment) Act, 1933, imposed with effect from the 23rd December, 1933 a duty (including the additional duty and the surcharge) of 3 as 9 p per imperial gallon on mineral oil, other than kerosene and motor spirit, which is suitable for use as an illuminant in wick lamps.

The Indian Tariff (Amendment) Act, 1934, which was passed on 19th February, 1934, affords assistance, by the imposition, generally, of minimum specific duties under the standard rate, to certain Indian industries which have been subject to menacing competition from foreign countries. The principal items affected are—

Alum, magnesium sulphate and magnesium chloride, cotton under vests and socks and stockings, glass globes and chimneys for lamps and lanterns, certain kinds of paints, colours, and painters' materials, enamelled ironware, electrical earthenware and porcelain, and domestic earthenware, china and porcelain, lead pencils, tiles of earthenware and porcelain; umbrellas, cast iron pipes, woollen hosiery, knitted apparel and fabrics; and toilet soaps,

The Act further imposed specific duties on hardened or hydrogenated fish oil and whale oil, sugar candy, and household and laundry soap and increased the duties on boots and shoes and uppers therefor, silk or artificial silk mixtures and certain kinds of cotton fests. The Act came into force on the 20th February, 1934, but the changes mentioned above became effective from the 23rd December, 1933, under the provisions of the Provisional Collection of Taxes Act, 1931.

The Wheat Import Duty (Extending) Act, 1934, extended the operation of the temporary import duty on wheat and wheat flour up to the 31st March, 1935. A Bill was introduced in March 1935 to reduce the wheat import duty from Rs 2 to Rs 1-8-0 per cwt.
